TWEED NEW HAVEN REGIONAL AIRPORT (HVN) RUNWAY EXTENSION AND TERMINAL EXPANSION PROJECT - INLAND WETLANDS/WATERCOURSES AND WQC & TIDAL WETLANDS AND WQC APPLICATION

This document entitled Tweed New Haven Regional Airport (HVN) Runway Extension and Terminal Expansion Project – Inland Wetlands/Watercourses and WQC & Tidal Wetlands and WQC Application was prepared by Hoyle, Tanner & Associates, Inc. (Hoyle Tanner) for the Tweed New Haven Airport Authority (the "Client"). Any reliance on this document by any third party is strictly prohibited. The material in it reflects Hoyle Tanner's professional judgment in light of the scope, schedule and other limitations stated in the document and in the contract between Hoyle Tanner and the Client. The opinions in the document are based on conditions and information existing at the time the document was published and do not take into account any subsequent changes. In preparing the document, Hoyle Tanner did not verify information supplied to it by others. Any use which a third party makes of this document is the responsibility of such third party. Such third party agrees that Hoyle Tanner shall not be responsible for costs or damages of any kind, if any, suffered by it or any other third party as a result of decisions made or actions taken based on this document.

APPLICATION FORM DEEP-LWRD-APP-001L

Connecticut Department of
Energy & Environmental Protection
Bureau of Water Protection & Land Reuse
Land & Water Resources Division

LWRD License Application Form L

Check Application Type(s):

- ☐ **Section 401 Water Quality Certificate (WQC) (Non-Tidal)**
- ☐ **Pre-Construction Notification (PCN) - USACE General Permits for CT**
- ☐ **Inland Wetlands and Watercourses** ***(State Agency/State Lands only)***
- ☒ **Inland Wetlands and Watercourses and WQC** ***(State Agency/State Lands only)***
- ☐ **Non-Consumptive Water Diversion**

All sections of the LWRD License Application, when applicable, must be posted to the DEEP LWRD FTP site as instructed on Part VII of the LWRD Transmittal Form. See LWRD Application Instructions for general guidance.

Application Number (as assigned in CPPU e-mail): 202503729

Applicant Name (same name used on Part III of the LWRD Transmittal Form): Tweed New Haven Airport Authority

Part I: Pre-Submission Consultations

The application process requires preliminary coordination and input from other agencies/groups depending on the activity and the location. Consultations with other agencies must occur prior to application submission. Please allow 6-8 weeks for the necessary coordination. For this application, the applicant should start with these consultations, as applicable (See Part VII for further guidance).

Attachments:

20	NDDB
23	Fisheries

Part II: Notifications

1. **PUBLIC NOTICE OF APPLICATION – Attachment 1**
   (REQUIRED for Section 401 Water Quality Certification , Inland Wetlands and Watercourses, and Non-consumptive Diversion applications)

   One notice for any combination of these programs is acceptable. Please refer to the *Public Notice Requirements for Permit Applications* (DEEP-INST-005A). The public notice of application must be published prior to submitting an application, as required in CGS section 22a-6g. Refer to the LWRD Application Instructions for public notice language. A copy of the published notice of application and the completed Certification of Notice Form (DEEP-APP-005A) must be included as Attachment 1 to this application. Your application will not be processed if Attachment 1 is not included.

2. **PROJECTS LOCATED IN A PUBLIC SUPPLY WATERSHED – Attachment 5**
   (REQUIRED for Inland Wetland and Watercourse application)
   Provide proof of written notice to the water company of the filing of this application in accordance with CGS section 22a-42f as Attachment 5 following this form.

Part III: U.S. Army Corps of Engineers Coordination

(Section 401 WQC and PCN only)

1. Include a copy of the United States Army Corps of Engineers (USACE) application as Attachment 28 and provide the name of USACE Project Manager, if known:

USACE Project Manager: Jared Pritts

2. For PCN Applications Only:
Check the applicable General Permit(s).

- ☐ GP2 Repair or maintenance of existing currently serviceable authorized or grandfathered structures & fill, removal of structures
- ☐ GP5 Boat ramps and marine railways
- ☐ GP6* Utility line activities
- ☐ GP9* Shoreline and bank stabilization projects
- ☐ GP10 Aquatic Habitat restoration, establishment and enhancement activities
- ☐ GP11 Fish and wildlife harvesting activities
- ☐ GP17 New/expanded developments and recreational facilities
- ☐ GP18* Linear transportation projects – wetland crossings only
- ☐ GP19* Stream, river and brook crossing (not including wetland crossings)
- ☐ GP21* Temporary fill not associated with any other GP activities

* If a town is receiving funding through the CTDOT, the applicant has to coordinate with the DOT program manager to arrange participation in an Interagency Coordination Meeting. Provide a copy of the meeting notes as Attachment 30.

Part IV: Site and Resource Information

1. SITE ADDRESS
Address of Site: 155 Burr Street City/Town: New Haven State: CT Zip Code: 06512

2. MUNICIPAL ZONING
Is the proposed work consistent with municipal zoning requirements?
☒ Yes ☐ No If no, explain: _____

3. WATERBODY/WATERCOURSES/WETLANDS
List names of all waters impacted by the proposed activity: Morris Creek, Tuttle Brook and associated inland and tidal wetlands

4. INDIAN LANDS
Is the activity that is the subject of this application located on federally recognized Indian lands? ☐ Yes ☒ No

Part IV: Site and Resource Information (continued)

5. AQUIFER PROTECTION AREAS

Is the site located within a mapped Level A or Level B Aquifer Protection Area, as defined in CGS section 22a-354a through 22a-354bb?

☐ Yes ☒ No If yes, check one: ☐ Level A or ☐ Level B

If Level A, are any of the regulated activities, as defined in RCSA section 22a-354i-1(34), conducted on this site? ☐ Yes ☐ No If yes, and your business is **not** already registered with the Aquifer Protection Program, contact the aquifer protection agent or DEEP to take appropriate action.

For more information on the Aquifer Protection Area Program, contact the program at 860-424-3019 or visit the website at www.ct.gov/deep/aquiferprotection. See LWRD Application Instructions for further guidance.

6. CONSERVATION OR PRESERVATION RESTRICTIONS

Will the activity which is the subject of this application be located within a conservation or preservation restriction area? ☐ Yes ☒ No

If yes, provide proof of written notice of this application to the holder of such restriction, and/or or a letter from the holder of such restriction verifying that this application is in compliance with the terms of the restriction, as Attachment 8.

7. LICENSE HISTORY

Indicate the number and date of issuance of any previous state permits or certificates issued by DEEP or USACE which authorized work at the site, and the names to whom they were issued.

License/Permit/COP Authorization Number and Name of Agency	*Date Issued*	*Name of Permittee/ Certificate Holder*	*Brief Description of Work Authorized*
OLISP 200003049-KZ, DIV-200003052, IW-2000-116, WQC-200003051, #200600317 NPDES	5/8/2007	Tweed-New Haven Airport Authority (TNHAA)	Creation of RSAs for RW 2 and RW 20, relocation of Morris Creek, extension of TW B, replace tide gate, wetland restoration
OLISP COP 201304084-KZ	11/19/2013	TNHAA	Install wildlife fence, add culverts under Pig Farm Rd, tidal impacts and wetland restoration
IW- 201304088 and IW-201304086	11/16/2013	TNHAA	wildlife fence and culverts under Pig Farm Rd, inland wetland impacts
FMC 201304274-FM and 201304275-FM	11/14/2013	TNHAA	Flood management certification for wildlife fence and Pig Farm Rc culverts
USACE NAE-2005-3307	11/8/2013	TNHAA	USACE permit for RSAs, revised to allow for wildlife fence

8. SOIL AND/OR GROUNDWATER REMEDIATION

Does the site work include soil and/or groundwater remediation? ☐ Yes ☒ No

If yes, please provide reference documentation including a) plan views of the site showing the area of contamination and b) a summary of remediation with chemical analysis, clean-up status, and remediation program identification, as Attachment 9.

9. ENFORCEMENT HISTORY

Is this application associated with a formal or informal enforcement action that is pending with DEEP?

☐ Yes ☒ No

If yes, please provide the enforcement action reference number and name of the DEEP staff contact:

Enforcement Action #: _____
DEEP Division/Program: _____
DEEP Staff Contact: _____

If the property was the subject of any historical enforcement actions known to the applicant, explain:

_____

Part IV: Site and Resource Information (continued)

10. RESOURCES IMPACTED

Check all that apply and complete Attachment 16, *Water Resource Impact Table*.

A. ☒ Inland Wetland(s)

☒ Check here to confirm that a Wetland Report (include functions and values*, USACE Wetland Determination Data Forms, Northcentral and Northeast Region*, and a description of any proposed impacts) is provided as Attachment 15. See LWRD Application Instructions for report requirements.

B. ☐ Watercourses – includes waterbodies (lakes, ponds, and impoundments)

Please be aware that any work involving construction, alteration or modification of a dam may require additional approvals from the DEEP Dam Safety Division (860-424-3704).

11. SPECIAL RESOURCE AREAS. If one of the following wetland types (see Table 1, p. 5 of 5 of the Department of the Army General Permits for the State of Connecticut) may be impacted by the proposed activity, please coordinate with LWRD staff (860-424-3019) to determine if an Individual Section 401 Water Quality Certification is necessary:

bog	calcareous seepage swamp
cedar swamp	fen
spruce swamp	vernal pool

12. MITIGATION

Regulated activities should be designed to avoid environmental impacts, and environmental impacts that are unavoidable should be minimized. Where unavoidable environmental impacts occur as a result of construction and/or operation of the proposed activity, mitigation for adverse impacts to wildlife and fish habitat, wetlands, watercourses, waterbodies and other natural resources should be incorporated into project plans.

☒ **Check here if mitigation was recommended through pre-application consultation with DEEP's Land & Water Resources Division, Fisheries Division, and/or Wildlife Division. Provide a mitigation plan with narrative as Attachment 17.**

Part V: Project Information

1. Describe the existing structures, conditions and uses at the site of the proposed work.
Provide photographs showing resources and existing site conditions as Attachment 10.

The site is an active airport that includes runways, taxiways, a terminal and associated structures pertinent to airport operation. The airport includes several tidal and freshwater/inland wetland systems along the edges of the property. See attached Executive Summary and Supplemental Narrative.

2a. Describe the proposed regulated work and activities in a detailed narrative, including the number and dimensions of structures and the volume and area of fill or excavations. See LWRD Application Instructions for required information.

The Applicant proposes the extension of Runway 02-20, drainage improvements and the replacement of the existing West Terminal with a new terminal ("East Terminal") on previously disturbed land on the east side of the Airport property. Additional elements associated with the East Terminal include associated roadways, parking lots, aprons and taxiways. See attached Executive Summary and Supplemental Narrative for details.

Part V: Project Information (continued)

2b. Describe the construction activities involved for the project in detail, including methods, sequencing, equipment, and any alternative construction methods that might be employed.

See attached Executive Summary and Supplemental Narrative that provides the Construction Sequence in detail and the plans provided in this aplication package.

2c. Describe any erosion and sedimentation or turbidity control installation and maintenance schedule and plans in detail. Such plans should be prepared in accordance with the 2002 Connecticut Guidelines for Soil Erosion and Sediment Control, as revised, established pursuant to CGS section 22a-328.

Erosion and Sediment Controls have been developed for the project site as required to address the 2024 Connecticut Guidelines for Soil Erosion and Sediment Control, as revised, established pursuant to CGS section 22a-328. Those are shown on the plans provided in this application package.

2d. Anticipated date of project initiation: Spring 2026

Indicate the length of time needed to complete the project and identify any anticipated time restrictions:
2 years

3. For **new** structures, activities or encroachments, discuss project alternatives which were considered and indicate why they were rejected. After all measures to eliminate or minimize adverse resource impacts have been incorporated in the proposed project, describe why any adverse impacts that remain should be deemed acceptable by the Land & Water Resources Division. For projects involving stormwater management, low-impact development practices should be incorporated to the greatest extent practicable. Explain any reasons for not using a low-impact development practice. See LWRD Application Instructions for further guidance.

A complete alternatives analysis and discussion of avoidance and minimization meaures has been provided in the attached Executive Summary and Supplemental Narrative.

4. If the project includes hydraulic and drainage structures, provide *Hydraulics Summary* as Attachment 19 and include Attachment 18, *Engineering Report Cover Sheet*.

a. Identify the type of structure: (Check one below that applies)

☒ Culvert	☐ Detention/Retention Basin	☐ Infiltration Basin/Structure
☐ Drainage Outfall	☐ Drainage Swale	☐ Bridge
☐ Dam	☐ Dike	☐ Outlet Control Structure
☐ Weir	☐ Pipe/Conduit/Aqueduct	☐ Other:

b. For bridge/culvert structures, what is the openness ratio? meters

The openness ratio is the X-sectional area of structure opening/ length of the structure parallel to the stream.)

c. What is the size of the contributing watershed to the structure? _____ Acres _____ Square Miles

Part VI: Engineering Support Documentation and Certification

Certain types of projects require documentation of engineering design. If you answer yes to one of the questions below, you must submit a completed *Engineering Report Cover Sheet* (DEEP-LWRD-APP-001R) as Attachment 18 along with the relevant engineering report(s).

1. Does the proposed activity include engineered structures such as bridges, culverts, stormwater management systems, detention basins, and/or flood & erosion control structures?

   ☒ Yes ☐ No

2. Is the proposed activity located in a FEMA-designated Riverine or Coastal Floodplain?

   ☒ Yes ☐ No

   If yes, provide documentation in the Engineering Report which demonstrates that the project is in compliance with FEMA's National Flood Insurance Program requirements and the local flood ordinance for the municipality.

   NOTE – Only the following activities in the Coastal Floodplain require engineering: buildings, flood and erosion control structures; public access facilities; and, tide regulating structures. See Engineering Report Cover Sheet for further guidance.

3. Is the proposed activity located in a FEMA-designated Floodway ☐ Yes ☒ No

   If yes, the Engineering Report must include a statement signed by a registered professional engineer that there is no-rise. This documentation must be supported by technical data that is derived from a standard step-backwater computer model utilizing source data from the Flood Insurance Rate Map (FIRM) or Flood Boundary and Floodway Map (FBFM). If a No-rise Certification form is available through the municipality, please include it in the Engineering Report. For further information on No-Rise Certification, see No-Rise Certification for Floodways | FEMA.gov

The *Engineering Report Cover Sheet* shall be signed and sealed by a Professional Engineer licensed in the State of Connecticut. Supporting documentation as identified in the checklist may consist of engineering studies and other documentation, as appropriate, in order to describe the hydrologic and hydraulic effects of the proposed actions.

Part VII: Supporting Documents

The following attachments correspond to Form L. **If the Attachment name is followed by "REQUIRED", the attachment must be submitted with every application.** When submitting any supporting documents, please label the documents as indicated in this part (e.g., Attachment 20, etc.) and be sure to include the same applicant name used on Page 1 of this application form. Please check the box next to the attachments listed to indicate that they have been submitted, and provide the applicable attachments following this form. NOTE: Attachment numbering is NOT consecutive as the attachments relate to multiple LWRD program applications.

Attachment I.D.	Attachment Description
☒ **Attachment 1**	**Notice of Permit Application** *(**REQUIRED** for Section 401 Water Quality Certification, Inland Wetlands and Watercourses, and Non-consumptive Diversion applications only)* A copy of the published notice of permit application, as described in the instructions, attached to a completed "*Certification of Notice Form- Notice of Application*" (DEEP-APP-005A)
☐ **Attachment 5**	**Water Company Notification** *(**REQUIRED** for Inland Wetland and Watercourse application only)* If the project is located in a public supply watershed, provide a certified mail receipt as proof of notice to the water company of the filing of this application in accordance with CGS section 22a-42f.
☒ **Attachment 7**	**Executive Summary REQUIRED** Summarize the information contained in the complete application which must include a description of the proposed regulated activities and a synopsis of the environmental and engineering analyses of the impact of such activities. Include a list of the titles of all plans, drawings, reports, studies, appendices, or other documentation which are attached as part of the application.

Part VII: Supporting Documents (continued)

☐ **Attachment 8** **Conservation or Preservation Restriction** Information, if applicable.

☐ **Attachment 9** **Remediation Documentation**, if applicable.

☒ **Attachment 10** **Photographs showing existing conditions of the site REQUIRED**

☒ **Attachment 14** **Project Plans**, use *Project Plan Checklist* for requirements **REQUIRED**

☒ **Attachment 15** **Wetland Report** as explained in Part IV, item 10A.

☒ **Attachment 16** ***Water Resource Impact Table*** (DEEP-LWRD-APP-001W) **REQUIRED**

☒ **Attachment 17** **Mitigation Plan (with narrative)** as coordinated with DEEP Staff.

☒ **Attachment 18** ***Engineering Report Cover Sheet*** (DEEP-LWRD-APP-001R)

☒ **Attachment 19** ***Hydraulics Summary*** (DEEP-LWRD-APP-001X)

☒ **Attachment 20** **Natural Diversity Data Base (NDDB)**
Completed NDDB Determination #: **202402808 & 202408268**
If the proposed activity is within an NDDB area, complete and submit a *Request for NDDB State Listed Species Review Form* (DEEP-APP-007) to the address specified on the form, **prior** to submitting this application. For NDDB maps and more information, visit the DEEP website at www.ct.gov/deep/nddbrequest or call the NDDB staff at 860-424-3011.

Please note NDDB review generally takes 4 to 6 weeks and may require the applicant to produce additional documentation, such as ecological surveys, which must be completed prior to submitting this permit application. A copy of the NDDB Final Determination response letter that has not expired ***must*** be submitted as Attachment 20. Include a copy of any mitigation measures or management plan developed for this activity and approved by NDDB. Please DO NOT include a copy of the NDDB Review Request/Application. Be aware that you must renew your NDDB Determination if it expires before project work commences.

☒ **Attachment 23** **Fisheries Consultation Form**
If your project involves one or more of the following activities, check the applicable box(es) below and submit a completed *Fisheries Consultation Form* (DEEP-FISH-APP-007).

☐ new public/fishing access;

☒ activities in inland/non-tidal waterbodies and watercourses.

☒ **Attachment 28** **For 401 Water Quality Certification and Pre-Construction Notification only**, attach a copy of the USACE application, ENG FORM 4345 (form only, no attachments)

☐ **Attachment 30** **For Pre-Construction Notification projects with DOT funding**, attach a copy of the Interagency Coordination Meeting notes

☒ **Attachment 41** ***Applicant Compliance Information Form*** (DEEP-APP-002) **REQUIRED**

☒ **Attachment 42** ***Applicant Background Information Form*** (DEEP-APP-008) **REQUIRED**

☐ **Attachment 43** **Other Information:** Any other applicable information the applicant deems relevant or is required by DEEP.

TWEED NEW HAVEN REGIONAL AIRPORT (HVN) RUNWAY EXTENSION AND TERMINAL EXPANSION PROJECT - INLAND WETLANDS/WATERCOURSES AND WQC & TIDAL WETLANDS AND WQC APPLICATION

APPLICATION FORM DEEP-LWRD-APP 001C

Connecticut Department of
Energy & Environmental Protection
Bureau of Water Protection & Land Reuse
Land & Water Resources Division

LWRD License Application Form C

Check Application Type:

- ☐ **Structures, Dredging & Fill (SDF)**
- ☐ **Structures, Dredging & Fill & Tidal Wetlands (TW)**
- ☐ **Structures, Dredging & Fill & Section 401 Water Quality Certificate (WQC)**
- ☒ **Structures, Dredging & Fill; TW; Section 401 WQC**
- ☐ **Section 401 Water Quality Certificate (Tidal Waters, Federal Agency Activity only)**

All sections of the LWRD application, when applicable, must be posted to the DEEP LWRD FTP site as instructed on Part VII of the LWRD Transmittal Form. See LWRD Application Instructions for general guidance.

Application Number (as assigned in CPPU e-mail): 202503729

Applicant Name (same name used on Part III of the LWRD Transmittal Form): Tweed New Haven Airport Authority

Part I: Pre-Submission Consultations

The application process requires preliminary coordination and input from other agencies/groups depending on the activity and the location. Consultations with other agencies must occur prior to application submission. Please allow 6-8 weeks for the necessary coordination. For this application, the applicant should start with these consultations, as applicable (See Part VI for further guidance).

Attachments:

20	NDDB	24	Bureau of Aquaculture
21	Wildlife- osprey	25	Harbor Management Commission
22	Dredging Projects	26	Shellfish Commission
23	Fisheries	27	USACE

Part II: Notifications

3. **PUBLIC NOTICE OF APPLICATION – Attachment 1**
One notice for any combination of these programs is acceptable. Please refer to the *Public Notice Requirements for Permit Applications* (DEEP-INST-005A). The public notice of application must be published prior to submitting an application, as required in CGS section 22a-6g. Refer to the LWRD Application Instructions for public notice language. A copy of the published notice of application and the completed Certification of Notice Form (DEEP-APP-005A) must be included as Attachment 1 to this application. Your application will not be processed if Attachment 1 is not included.

4. **ADJACENT PARCEL OWNER NOTIFICATION – Attachment 3**
(REQUIRED for Structures, Dredging and Fill & Tidal Wetland applications only)
The "*Certification of Notice Form - Notice of Application*" (Attachment 3) has to be mailed to any land owner of record for any property that is located five hundred (500) feet or less from the property line where the activity is proposed. See Part VI for further guidance.

5. **MUNICIPAL NOTIFICATION OF TIDAL WETLAND APPLICATION – Attachment 4**
(REQUIRED for Tidal Wetland applications only)
The applicant shall mail or e-mail a copy of the application to the chief administrative officer and the chairmen of the conservation and shellfish commissions. See Part VI for further guidance.

Part III: Site and Resource Information

1. SITE ADDRESS

Street: 155 Burr Street City/Town: New Haven State: CT Zip Code: 06512

2. MUNICIPAL ZONING

Is the proposed work consistent with municipal zoning requirements?

☒ Yes ☐ No If no, explain: _____

3. WATERBODY/WATERCOURSES/WETLANDS

List names of all waters impacted by the proposed activity: Morris Creek, Tuttle Brook and associated inland and tidal wetlands

4. INDIAN LANDS

Is the activity that is the subject of this application on federally recognized Indian lands? ☐ Yes ☒ No

5. AQUIFER PROTECTION AREAS

Is the site located within a mapped Level A or Level B Aquifer Protection Area, as defined in CGS section 22a-354a through 22a-354bb?

☐ Yes ☒ No If yes, check one: ☐ Level A or ☐ Level B

If Level A, are any of the regulated activities, as defined in RCSA section 22a-354i-1(34), conducted on this site? ☐ Yes ☐ No

If yes, and your business is **not** already registered with the Aquifer Protection Program, contact the aquifer protection agent or DEEP to take appropriate action. For more information on the Aquifer Protection Area Program, contact the program at 860-424-3019 or visit the website at www.ct.gov/deep/aquiferprotection. See LWRD Application Instructions for further guidance.

6. CONSERVATION OR PRESERVATION RESTRICTIONS

Will the activity which is the subject of this application be located within a conservation or preservation restriction area? ☐ Yes ☒ No

If yes, provide proof of written notice of this application to the holder of such restriction, and/or or a letter from the holder of such restriction verifying that this application is in compliance with the terms of the restriction, as Attachment 8.

7. LICENSE HISTORY

Indicate the number and date of issuance of any previous state permits or certificates issued by DEEP or USACE which authorized work at the site, and the names to whom they were issued.

License/Permit/COP Authorization Number and Name of Agency	*Date Issued*	*Name of Permittee/ Certificate Holder*	*Brief Description of Work Authorized*
OLISP 200003049-KZ, DIV-200003052, IW-2000-116, WQC-200003051, #200600317 NPDES	5/8/2007	Tweed-New Haven Airport Authority (TNHAA)	Creation of RSAs for RW 2 and RW 20, relocation of Morris Creek, extension of TW B, replace tide gate, wetland restoration
OLISP COP 201304084-KZ	11/19/2013	TNHAA	Install wildlife fence, add culverts under Pig Farm Rd, tidal impacts and wetland restoration
IW- 201304088 and IW-201304086	11/16/2013	TNHAA	wildlife fence and culverts under Pig Farm Rd, inland wetland impacts
FMC 201304274-FM and 201304275-FM	11/14/2013	TNHAA	Flood management certification for wildlife fence and Pig Farm Rd culverts
USACE NAE-2005-3307	11/8/2013	TNHAA	USACE permit for RSAs, revised to allow for wildlife fence

Part III: Site and Resource Information (continued)

8. SOIL AND/OR GROUNDWATER REMEDIATION

Does the site work include soil and/or groundwater remediation? ☐ Yes ☒ No

If yes, please provide reference documentation including a) plan views of the site showing the area of contamination and b) a summary of remediation with chemical analysis, clean-up status, and remediation program identification, as Attachment 9.

9. ENFORCEMENT HISTORY

Is this application associated with a formal or informal enforcement action that is pending with DEEP?

☐ Yes ☒ No

If yes, please provide the enforcement action reference number and name of the DEEP staff contact:

Enforcement Action #: _____

DEEP Division/Program: _____

DEEP Staff Contact: _____

If the property was the subject of any historical enforcement actions known to the applicant, explain:

_____

10. Regulatory Limit – See Reference Guide for Regulatory Jurisdiction for further explanation if necessary. Indicate the landward extent of the State's regulatory jurisdiction by checking one box:

☐ **Coastal Jurisdiction Line** (CJL)- for CJL information, refer to the Coastal Jurisdiction Fact Sheet and Chart.

☐ **Mean High Water** (MHW) - for projects located upstream of a tide gate, dam or weir (structure must be shown on project plans).

☒ **Tidal Wetland Boundary** – To be used if tidal wetlands are located landward of CJL or MHW. Include one foot above local extreme high water, if applicable.

11. Tidal Elevations

Provide site elevations for CJL, MHW, Mean Low Water (MLW) and the High Tide Line (HTL)* in NAVD88. For general elevation reference and conversion, please refer to USACE Tidal Flood Profiles; CO-OPS Map - NOAA Tides & Currents; or, Online VDatum: Vertical Datums Transformation

CJL = 2.5' MHW = 2.5' MLW = -3.4' HTL = 2.5'

This data is from previously established CJL at the site – see permit narrative for additional explanation

*The HTL is necessary for USACE jurisdiction and required as part of the USACE application.

Part III: Site and Resource Information (continued)

12. Coastal Resource Impact Table

Check the applicable boxes below to identify coastal resources to be impacted by the proposed activity at the project site. Describe the impacts, as applicable. For definitions, refer to the Connecticut Coastal Management Manual.

Resource Type	square feet			Describe Impacts
	Permanent impact	Temporary impact	Mitigation	
☐ Beaches/Dunes below HTL below CJL				
☒ Tidal Wetlands	0	421		**Identify if existing vegetation is salt, brackish or freshwater wetland.** Impacts will be to install a cofferdam to dewater the area of alteration to the tide gate; area is estuarine channel with no vegetation.
☐ Nearshore waters				

Resource Type	Describe Impacts (temporary and permanent)
☐ Benthic Habitat	
☐ Intertidal Flats	
☐ Submerged Aquatic Vegetation (SAV)	
☐ Rocky Shorefront	**Include rocky intertidal areas.**
☐ Finfish	
☐ Wildlife	
☐ Shellfish Areas	**Maps available at The Aquaculture Mapping Atlas.**
☐ Coastal Hazard Area	**Discuss FEMA compliance.**
☐ Bluffs/Escarpments	**Describe impacts associated with flood and erosion control structures.**
☐ Islands	**If new access is proposed, describe how island resources will be impacted.**
☐ Coastal Flooding	**Describe how tide gates/fill/seawall height increases will impact flooding.**
☐ Water Circulation Patterns	**Describe impacts from groins/abutments/jetties.**
☐ Drainage Patterns	**Describe impacts from impervious surfaces/outfalls/weep holes and stormwater modifications.**
☐ Visual Quality	**Only applies to public views of statewide scenic significance.**
☐ Water Quality	**Discuss sediment and erosion controls, water handling, and stormwater treatment.**

Part IV: Project Information

Please note: Upon adoption of the Long Island Sound Blue Plan, the policies of the Blue Plan will be factors for consideration for projects in the Blue Plan Policy Area boundary. The Policy Area boundary can be found on the Blue Plan Map Viewer, while the policies are located in Chapter 4 of the Blue Plan document.

2. Describe, briefly, the existing structures within state regulatory jurisdiction, and their conditions and uses at the site of the proposed work. **Provide photographs showing resources and existing site conditions as Attachment 10.**

   The site is an active airport that includes runways, taxiways, a terminal and associated structures pertinent to airport operation. The airport includes several tidal and freshwater/inland wetland systems along the edges of the property. See attached Executive Summary and Supplemental Narrative.

3. a. Describe the proposed regulated work and activities in a detailed narrative, including the number and dimensions of structures and the volume and area of fill or excavations. See LWRD Application Instructions for required information.

   The Applicant proposes the extension of Runway 02-20, drainage improvements and the replacement of the existing West Terminal with a new terminal ("East Terminal") on previously disturbed land on the east side of the Airport property. Additional elements associated with the East Terminal include associated roadways, parking lots, aprons and taxiways. See attached Executive Summary and Supplemental Narrative for details.

   b. Describe the construction activities involved for the project in detail, including methods, sequencing, equipment, and any alternative construction methods that might be employed. For coastal dredging projects, identify the type of equipment with bucket and barge capacity and, for upland disposal, provide containment facility details (See Reference for Coastal/Tidal Dredging).

   See attached Executive Summary and Supplemental Narrative that provides the Construction Sequence in detail and the plans provided in this aplication package.

   c. Describe any erosion and sedimentation or turbidity control installation and maintenance schedule and plans in detail. Such plans should be prepared in accordance with the 2002 Connecticut Guidelines for Soil Erosion and Sediment Control, as revised, established pursuant to CGS section 22a- 328. Erosion and Sediment Controls have been developed for the project site as required to address the 2024 Connecticut Guidelines for Soil Erosion and Sediment Control, as revised, established pursuant to CGS section 22a-328. Those are shown on the plans provided in this application package.

   d. Anticipated date of project initiation: Spring 2026

   Indicate the length of time needed to complete the project and identify any anticipated time restrictions: 2 years

4. For **new** structures, activities or encroachments, discuss project alternatives which were considered and indicate why they were rejected. After all measures to eliminate or minimize adverse resource impacts have been incorporated in the proposed project, describe why any adverse impacts that remain should be deemed acceptable by the Land & Water Resources Division. For projects involving stormwater management, low-impact development practices should be incorporated to the greatest extent practicable. Explain any reasons for not using a low-impact development practice. See LWRD Application Instructions for further guidance.

   A complete alternatives analysis and discussion of avoidance and minimization meaures has been provided in the attached Executive Summary and Supplemental Narrative.

Part IV: Project Information (continued)

4. The proposed work is associated with which of the following uses? (Check all that apply)

   ☐ Marine commercial/industrial use including aquaculture

   ☐ Flood and erosion control

   ☐ Residential boating access

   ☐ Shared residential boating access

   ☐ Public access

   ☒ Infrastructure improvement

   ☐ Other – explain: _____

5. If the site is a marina or yacht club, provide the following:

   a. Number of boat slips and moorings: _____ (should be consistent with plans submitted as Attachment 14)

   b. Type of marine sanitation service provided at the facility. _____

   c. ☐ Check here to confirm that at least one plan view notes the location of upland support including adequate parking, a marina office, and restrooms.

   d. Check the applicable services provided:

   ☐ boat repair/maintenance ☐ winter storage

   ☐ gas/fuel hook-up ☐ electric hook-up

   ☐ fishing amenities ☐ boating and/or equipment sales

6. If local/municipal review has or will require a Coastal Site Plan Review for activities at this site, please explain the associated upland work. _____

7. If a new or expanded flood and erosion control structure (e.g. seawall) is proposed, it would provide for the protection of:

   ☐ an infrastructural facility ☐ cemetery or burial grounds

   ☐ a water-dependent use ☐ a pre-1995 commercial or residential structure

   Please make sure Item 3., above, documents that there are no feasible, less environmentally damaging alternatives and include Attachment 18, Engineering Report Cover Sheet. Also, the municipality must forward the related Coastal Site Plan Review to LWRD. See LWRD Application Instructions for further guidance.

8. Identify and evaluate any potential beneficial or adverse impacts to:

   a. Navigation (include federal and local navigation channels and distance to nearby docks):

   _____

   b. Public access to, and public use of, public trust lands and waters waterward of Mean High Water:

   Impacts waterward of MHW will be temporary and for alteration of the tide gate that serves as flood protection for the residential neighborhoods to the west of the airport.

Part V: Engineering Support Documentation and Certification

Certain types of projects require documentation of engineering design. If you answer yes to one of the questions below, you must submit a completed ***Engineering Report Cover Sheet*** (DEEP-LWRD-APP-001R) as Attachment 18 along with the relevant engineering report(s).

4. Does the proposed activity include engineered structures such as bridges, culverts, stormwater management systems, detention basins, and/or flood & erosion control structures?

   ☒ Yes ☐ No

5. Is the proposed activity located in a FEMA-designated Riverine or Coastal Floodplain?

   ☒ Yes ☐ No

   If yes, provide documentation in the Engineering Report which demonstrates that the project is in compliance with FEMA's National Flood Insurance Program requirements and the local flood ordinance for the municipality.

   NOTE – Only the following activities in the Coastal Floodplain require engineering: buildings, flood and erosion control structures; public access facilities; and, tide regulating structures. See Engineering Report Cover Sheet for further guidance.

6. Is the proposed activity located in a FEMA-designated Floodway ☐ Yes ☒ No

   If yes, the Engineering Report must include a statement signed by a registered professional engineer that there is no-rise. This documentation must be supported by technical data that is derived from a standard step-backwater computer model utilizing source data from the Flood Insurance Rate Map (FIRM) or Flood Boundary and Floodway Map (FBFM). If a No-rise Certification form is available through the municipality, please include it in the Engineering Report. For further information on No-Rise Certification, see No-Rise Certification for Floodways | FEMA.gov

The *Engineering Report Cover Sheet* shall be signed and sealed by a Professional Engineer licensed in the State of Connecticut. Supporting documentation as identified in the checklist may consist of engineering studies and other documentation, as appropriate, in order to describe the hydrologic and hydraulic effects of the proposed actions.

Part VI: Supporting Documents

The following attachments correspond to Form C. **If the Attachment name is followed by "REQUIRED", the attachment must be submitted with every application.** When submitting any supporting documents, please label the documents as indicated in this part (e.g., Attachment 1, etc.) and be sure to include the same applicant name used on Page 1 of this application form. Please check the box next to the attachments listed to indicate that they have been submitted and provide the applicable attachments following this form. NOTE: Attachment numbering is NOT consecutive as the attachments relate to multiple LWRD program applications.

Attachment ID	Attachment Description
☒ **Attachment 1**	**Public Notice of Application REQUIRED** A copy of the published notice of permit application, as described in the instructions, attached to a completed "*Certification of Notice Form- Notice of Application*" (DEEP-APP-005A)
☒ **Attachment 3**	**Adjacent Parcel Notification REQUIRED** *(Structures, Dredging and Fill & Tidal Wetland applications only)* Any land owner of record for any property that is located five hundred (500) feet or less from the property line where the activity is proposed has to be mailed the "Certification of Notice Form - Notice of Application" (Attachment 1). As Attachment 3, provide the names and mailing addresses for these individuals and a certified mail receipt to document that a copy of the Notice of Application was sent to each. If the proposed work is entirely waterward of Mean High Water, but within the apparent riparian/littoral area of a shoreline property, that property should be used to compile the list of the names and addresses of all land owners of record located within five hundred feet from the property lines. Include any known claimants of water rights adjacent to the project and owners or lessees of shellfish grounds or franchises within the work area.

Part VI: Supporting Documents (continued)

☒ **Attachment 4** **Application Copy to Municipality**

(REQUIRED for Tidal Wetland applications only)
In accordance with CGS section 22a-32, the applicant shall mail or e-mail a copy of the application to the chief administrative officer and the chairmen of the conservation and shellfish commissions of the town or towns where the proposed work is located. Provide documentation such as a return receipt email or certified mail receipt to prove that such notification was completed. The applicant is also responsible for providing a copy of any substantive revisions made during the application review process.

☒ **Attachment 7** **Executive Summary** REQUIRED

Summarize the information contained in the complete application which must include a description of the proposed regulated activities and a synopsis of the environmental and engineering analyses of the impact of such activities. Include a list of the titles of all plans, drawings, reports, studies, appendices, or other documentation which are attached as part of the application.

☐ **Attachment 8** **Conservation or Preservation Restriction Information, if applicable.**

☐ **Attachment 9** **Remediation Documentation**, if applicable.

☒ **Attachment 10** **Photographs showing existing conditions of the site REQUIRED**

☒ **Attachment 14** **Project Plans,** use *Project Plan Checklist* for requirements **REQUIRED**

☒ **Attachment 18** ***Engineering Report Cover Sheet*** (DEEP-LWRD-APP-001R)

☒ **Attachment 20** **Natural Diversity Data Base (NDDB)**
Completed NDDB Determination #: **202402808 & 202408268**
If the proposed activity is within an NDDB area, complete and submit a *Request for NDDB State Listed Species Review Form* (DEEP-APP-007) to the address specified on the form, **prior** to submitting this application. For NDDB maps and more information, visit the DEEP website at www.ct.gov/deep/nddbrequest or call the NDDB staff at 860-424-3011.

Please note NDDB review generally takes 4 to 6 weeks and may require the applicant to produce additional documentation, such as ecological surveys, which must be completed prior to submitting this permit application. A copy of the NDDB Final Determination response letter that has not expired ***must*** be submitted as Attachment 20. Include a copy of any mitigation measures or management plan developed for this activity and approved by NDDB. Please DO NOT include a copy of the NDDB Review Request/Application. Be aware that you must renew your NDDB Determination if it expires before project work commences.

☐ **Attachment 21** **DEEP Wildlife Division – Osprey Consultation**

If the proposed activity will occur within 300 feet of an osprey platform, please note that work will be prohibited between May 1st and July 31st unless a DEEP waiver is obtained. If this seasonal prohibition conflicts with the proposed work schedule, please contact the DEEP Wildlife Division's Wildlife Diversity Program staff at deep.wildlife@ct.gov or 860-424-3011 for technical assistance before submitting your application. If you are seeking a seasonal prohibition waiver, documentation of the waiver issued by Wildlife Diversity Program staff must be submitted as Attachment 21. For known nesting locations, reference the Osprey Map at:

https://www.google.com/maps/d/viewer?mid=1GyxnB-UAGxmseIecH9Zj4UdH1ug&usp=sharing or https://www.ctaudubon.org/citizen-science.

Part VI: Supporting Documents (continued)

☐ **Attachment 22** Dredging **Consultation Form**
*(**REQUIRED** for dredging activities only.)*
If dredging is proposed, please refer to Reference for Coastal/Tidal Dredging and submit a completed *Dredging Consultation Form*.

☒ **Attachment 23** **Fisheries Consultation Form**
If your project involves one or more of the following activities, check the applicable box(es) below and submit a completed *Fisheries Consultation Form* (DEEP-FISH-APP-007).

- ☐ new public/fishing access;
- ☐ beach nourishment;
- ☐ new docks and marinas on the Connecticut River;
- ☒ coastal/tidal dredging projects;
- ☐ culverts and bridges; and
- ☐ activities within the Blue Plan Policy Area boundary.

Note: Fisheries consultation is **not required** for docks and marinas on Long Island Sound and for disposal only of dredge sediment at one of the open water sites (generally NY dredge projects).

☐ **Attachment 24** **Department of Agriculture/Bureau of Aquaculture Consultation**
If your project falls within one the categories below, check the box and submit a completed *Department of Agriculture/Bureau of Aquaculture Consultation Form*.

- ☐ any project in a municipality directly on Long Island Sound
- ☐ any project on the Connecticut River in Old Saybrook or Lyme
- ☐ any project on the Housatonic River in Stratford or Milford
- ☐ any project on the Thames River in New London, Waterford, Montville, Ledyard or Groton
- ☐ dredging projects only in Lyme, Essex, Orange, Derby/Ansonia, Norwich or Preston

☐ **Attachment 25** **Harbor Management Consultation Form**
If your town has a Harbor Management Commission, submit a completed *Harbor Management Commission Consultation Form*.

☐ **Attachment 26** **Shellfish Commission Consultation Form**
If your town has a Shellfish Commission, submit a completed *Shellfish Commission Consultation Form*.

☒ **Attachment 27** **USACE Consultation Form**
This consultation form is required to be submitted as part of an application for a Structures, Dredging & Fill license (Connecticut General Statutes (CGS) Section 22a-361) and/or Tidal Wetlands license (CGS Section 22a-32).

☒ **Attachment 41** ***Applicant Compliance Information Form*** (DEEP-APP-002) **REQUIRED**.

☒ **Attachment 42** ***Applicant Background Information Form*** (DEEP-APP-008) **REQUIRED**.

☐ **Attachment 43** **Other Information:** Any other applicable information the applicant deems relevant or is required by DEEP.

ATTACHMENT 1 – NOTICE OF PERMIT APPLICATION

Notice of Permit Application

Town(s): **New Haven and East Haven, CT**

Notice is hereby given that the **Tweed New Haven Airport Authority** (the "applicant") of **155 Burr Street, New Haven, CT 06512** and **The New HVN LLC** (co-applicant) of **45025 Aviation Drive, Suite 100, Dulles, VA 20166** will submit to the Department of Energy & Environmental Protection an application under Connecticut General Statutes Section(s):22a-32**;** 22a-361 and Section 401 of the Federal Clean Water Act, 33 U.S.C. 1341.

Specifically, the applicants propose the extension of Runway 02-20, drainage improvements and the replacement of the existing West Terminal with a new terminal ("East Terminal") on previously disturbed land on the east side of the Airport property. Additional elements associated with the East Terminal include associated roadways, parking lots, aprons and taxiways on airport property. The proposed activity will take place at the Tweed New Haven Regional Airport, 155 Burr Street, New Haven, CT 06512. The proposed activity will potentially affect: Morris Creek, Tuttle Brook and associated inland and tidal wetlands**.**

Interested persons may obtain copies of the application from Kimberly Peace, Hoyle, Tanner & Associates, Inc., 150 Dow Street, Manchester, NH 03101, 603-460-5205, kpeace@hoyletanner.com.

The application will be available for inspection at the Department of Energy & Environmental Protection, Land & Water Resources Division, 79 Elm Street, Hartford, CT 06106-5127, telephone 860-424-3019 from 8:30 to 4:30 Monday through Friday. Please call in advance to schedule a review of the application.

PUBLIC NOTICES

PUBLIC NOTICE

Notice is hereby given that T Westbrook Center LLC in partnership with Lexington Partners LLC with an address of One Financial Plaza, 12th Floor, Hartford, Connecticut will submit to the Department of Energy and Environmental Protection an application under Section 22a-430 of the Connecticut General Statutes for a permit to initiate, create, originate and maintain a discharge of water, substance or material to the waters of the State.

Specifically, the applicant proposes a transit orientated redevelopment of the Westbrook Outlet Shopping Center located at 314 Flat Rock Place in Westbrook, Connecticut. These activities will require a modification to an existing Subsurface Sewage Disposal System (SSDS) increasing the disposal capacity to approximately 170,000 gallons per day. The effluent disposal will be dispersed across the property in siz (6) SSDS leaching fields. The location of these leaching fields will be designed in accordance with the Connecticut Department of Energy and Environmental Protection's (DEEP) "Guidance for Design of Large-Scale On-Site Wastewater Renovation Systems" with approval from Westbrook Inland Wetlands & Watercourse Commission.

Interested persons may obtain copies of the application from Mark Zimmermann c/o Updike, Kelly & Spellacy, P.C., 225 Asylum Street, 20th Floor, Hartford, CT 06103, or by email at mzimmermann@uks.com.

The application will also be available for inspection at the Department of Energy and Environmental Protection, Bureau of Materials Management and Compliance Assurance, Permitting and Enforcement, 79 Elm Street, Hartford, CT 06106-5127 (860-424-3025) from 8:30 to 4:30, Monday through Friday. Please call-in advance to schedule review of the application.

Section 106 Public Notice

T-Mobile Northeast, LLC proposes to collocate antennas on the rooftop and steeple of a 100-foot-tall (overall height) building located at 56 South Cliff Street, Ansonia, New Haven County, CT 06401. Interested parties with comments regarding potential effects on Historic Properties may contact T-Mobile c/o Julia Klima at Dynamic Environmental Associates, Inc., 3850 Lake Street, Suite C, Macon, GA 31204, 877-968-4787, Sec106@DynamicEnvironmental.com within 30 days from the date of this publication. PUBLIC NOTICES

State of Connecticut
Court of Probate, New Haven Regional Children's Probate Court District

NOTICE TO Natasha Clay, whose last known address is unknown to the court.

Pursuant to an order of Hon. Americo R. Carchia, Judge, a hearing will be held at New Haven Regional Children's Probate Court, 873 State Street, New Haven, CT 06511-3923 on April 30, 2025 at 2:00 PM on a petition for Family Case Conference concerning a certain minor child born on January 15, 2015. The court's decision will affect your interest, if any, as in the petition on file more fully appears.

RIGHT TO COUNSEL: If the above-named person wishes to have an attorney, but is unable to pay for one, the court will provide an attorney upon proof of inability to pay. Any such request should be made immediately by contacting the court office where the hearing is to be held.

By order of the court

Josephine Smith, Clerk

WEST HAVEN CITY COUNCIL

NOTICE OF PUBLIC HEARING is hereby given that on April 28, 2025, at 6:55 P.M. at the West Haven City Hall, 355 Main Street, 3rd Floor, City Council Chambers, the West Haven Legislative Committee will conduct a public hearing regarding: AN AMENDMENT TO ARTICLE VIII OF CHAPTER 211 OF THE CODE OF THE CITY OF WEST HAVEN, ELDERLY TAX FREEZE. SUMMARY: Article VIII of Chapter 211 provides for a tax freeze on owner-occupied real property for certain qualifying individuals 70 years and older. The proposed amendment changes the residency requirement from 20 consecutive years to 10 consecutive years; clarifies the language to define the freeze date as the October Grand List for the fiscal year immediately preceding the date of application; eliminates the requirement that no children under the age of 25 years may reside in the residence; clarifies the language regarding property owned jointly, allowing for a survivor age 65 years or older to maintain the tax freeze; and provides that new applications shall be considered by the Assessor between February first and May fifteenth of each year. For a complete copy you can go to the City Clerk's Office or the City of West Haven website. Comments by mail to West Haven City Council, 355 Main Street, West Haven, CT 06516, or email to: cserrini@westhaven-ct.gov

172 Beatrice Drive: An application to expand the parking in the front yard. In the R2 (single Family Detached Residence) Owner: Lou & Tanya Silva/ Applicant: Dylan's Paving & Excavating LLC. File # SP 25-15

50 Industry Drive: Add an accessory building and outdoor living display area. Located in the IPD (Industrial Planned Development) district Owner / Applicant Eli Properties, LLC File # SR 25-16

441 Derby Avenue: A modification for a previously approved Site Plan Review. Located in the RB (Regional Business) district. Owner: Grinnell, LLC/ Applicant Highway 84 LLC. File # SR25-17

855 Boston Post Road: A Special Permit and Site Plan review to allow the front portion of the building to be utilized as an indoor soccer venue. The applicant will add interior and exterior paint and repair cracks and deficiencies in the parking lot and drive. Also seal coat parking and striping for 100 parking spaces for user and add signage. Owner: 855 Orange Avenue, LLC/ Applicant Five Star Holdings, LLC. File #SP 25-18 and #SR 25-19

Applications and supporting documents available for review in the office of Planning & Development, 355 Main Street, West Haven, CT.

Christopher Suggs
Chairman

FLOOD SAFETY

Floods are among the most frequent and costly natural disasters. Flooding often occurs following a hurricane, thawing snow, or several days of sustained rain. Flash floods occur suddenly, due to rapidly rising water along a stream or low-lying area.

KNOW THE DIFFERENCE!

A flood/flash flood WATCH means a flood or flash flood is possible.

A flood/flash flood WARNING means flooding or flash flooding is already occurring or will occur soon. TAKE IMMEDIATE PRECAUTIONS!

American Red Cross

PUBLIC NOTICES

Notice of Permit Application
Town(s): New Haven and East Haven, CT

Notice is hereby given that the Tweed New Haven Airport Authority (the "applicant") of 155 Burr Street, New Haven, CT 06512 and The New HVN LLC (co-applicant) of 45025 Aviation Drive, Suite 100, Dulles, VA 20166 will submit to the Department of Energy & Environmental Protection an application under Connecticut General Statutes Section(s):22a-32; 22a-361 and Section 401 of the Federal Clean Water Act, 33 U.S.C. 1341.

Specifically, the applicants propose the extension of Runway 02-20, drainage improvements and the replacement of the existing West Terminal with a new terminal ("East Terminal") on previously disturbed land on the east side of the Airport property. Additional elements associated with the East Terminal include associated roadways, parking lots, aprons and taxiways on airport property. The proposed activity will take place at the Tweed New Haven Regional Airport, 155 Burr Street, New Haven, CT 06512. The proposed activity will potentially affect: Morris Creek, Tuttle Brook and associated inland and tidal wetlands.

Interested persons may obtain copies of the application from Kimberly Peace, Hoyle, Tanner & Associates, Inc., 150 Dow Street, Manchester, NH 03101, 603-460-5205, kpeace@hoyletanner.com.

The application will be available for inspection at the Department of Energy & Environmental Protection, Land & Water Resources Division, 79 Elm Street, Hartford, CT 06106-5127, telephone 860-424-3019 from 8:30 to 4:30 Monday through Friday. Please call in advance to schedule a review of the application.k

PROBATE NOTICES

NOTICE TO CREDITORS

ESTATE OF Bruce M. Russett (23-00723)

The Hon. Michael Dolan, Judge of the Court of Probate, District of Hamden - Bethany Probate Court, by decree dated April 2, 2025, ordered that all claims must be presented to the fiduciary at the address below. Failure to promptly present any such claim may result in the loss of rights to recover on such claim.

Melanie Purchio, Clerk

The fiduciary is:

Mark D. Russett,
66 Meridian Street,
Melrose, MA 02176

Did You Know?

There's much to celebrate on the Spring Equinox, which is also referred to as the "Vernal Equinox" or the "March Equinox" and marks the official beginning of spring, a season many people associate with rejuvenation and longer hours of daylight. One unusual aspect of the equinoxes (the Autumnal Equinox in September ushers in the beginning of fall) is these days feature the fastest sunsets and sunrises of the year. According to Earthsky.org, this phenomenon occurs because the sun rises due east and sets due west on the equinoxes, which means the setting sun hits the horizon at its steepest possible angle. That steep angle leads to a very short sunrise and sunset on the equinoxes.

HOME FIRE PREPAREDNESS: FIRE ESCAPE PLANNING

The most effective way to protect yourself and your home from fire is to identify and remove fire hazards. Sixty-five percent of home fire deaths occur in homes with no working smoke alarms. During a home fire, working smoke alarms and a fire escape plan that has been practiced regularly can save lives.

*If a fire occurs in your home, **GET OUT, STAY OUT** and **CALL** for help.*

***Install smoke alarms** on every level of your home, inside bedrooms and outside sleeping areas. Test them every month and replace the batteries at least once a year.*

*Talk with all household members about a **fire escape plan** and practice the plan twice a year.*

- ❑ Ensure that all household members know two ways to escape from every room of your home.
- ❑ Go to your outside meeting place and then call for help.
- ❑ If closed doors or handles are warm, use your second way out. Never open doors that are warm to the touch.
- ❑ If smoke, heat or flames block your exit routes, stay in the room with doors closed. Place a wet towel under the door and call the fire department or 9-1-1. Open a window and wave a brightly colored cloth or flashlight to signal for help.
- ❑ Practice escaping from your home at least twice a year and at different times of the day. Practice waking up to smoke alarms, low crawling and meeting outside. Make sure everyone knows how to call 9-1-1.
- ❑ Teach household members to **STOP, DROP** and **ROLL** if their clothes should catch on fire.

Hello

Tweed New Haven Airport Authority and The New HVN LLC, co-applicants, are submitting a tidal wetland permit application to CT DEEP for a project at Tweed New Haven Regional Airport entitled “Runway Extension and Terminal Expansion”. There will be unavoidable tidal wetland impacts as a result of the project. In accordance with CGS section 22a-32 we are providing you with a copy of the permit application that is being submitted to CT DEEP for these impacts. Due to file size, this application package is available for you to download on our SharePoint site and can be accessed through this link: Tweed New Haven Airport - CT DEEP Wetland Permit Application

Should you have any difficulties accessing the site or downloading the application please feel free to contact me.

Thank you

HOYLE TANNER

TWEED NEW HAVEN REGIONAL AIRPORT (HVN) RUNWAY EXTENSION AND TERMINAL EXPANSION PROJECT - INLAND WETLANDS/WATERCOURSES AND WQC & TIDAL WETLANDS AND WQC APPLICATION

ATTACHMENT 7 – EXECUTIVE SUMMARY AND SUPPLEMENTAL NARRATIVE

Introduction

The Tweed New Haven Airport Authority (TNHAA) was created in 1998 by the State of Connecticut (CGS 15-120i) to manage and operate Tweed New Haven Regional Airport (HVN). TNHAA is a public instrumentality and political subdivision of the State. It is the role of TNHAA to maintain and improve HVN as an important economic development asset for the south-central Connecticut region. TNHAA's primary duty is to manage, maintain, supervise and operate HVN and do all things necessary to maintain working relationships with the state, municipalities and persons, and conduct the business of a regional airport, in accordance with applicable statutes and regulations. TNHAA has full control of the operation and management of the airport, including land, buildings and easements by virtue of a lease to the authority by the City of New Haven, which owns the airport. On August 19, 2022, the Authority entered into a long-term Lease & Development Agreement with The New HVN, LLC. TNHAA and The New HVN LLC are co-applicants for this project.

Purpose and Need

The purpose of the project is to improve airfield and terminal area facilities at HVN to accommodate existing and reasonably foreseeable aircraft operations and passenger volumes. The goal of the project is to enhance efficiency and terminal area capacity and alleviate the operational constraints at HVN while ensuring the Airport continues to develop in order to provide an airport facility that reliably and safely offers consistent and adequate level of service for the forecasted demand. The project would allow HVN to respond effectively and efficiently to current needs, future changes, and air service improvements in southern Connecticut. Specifically, the project would address operational constraints through the runway extension and replacement of the existing terminal with a new East Terminal. This would include associated landside (parking and roadways) infrastructure and aircraft parking areas in a manner that efficiently utilizes the available land within the airport developed footprint.

The applicants have identified multiple needs for the project:

- There is a need for increased runway length, apron area and taxilane space. HVN is currently incurring payload / weight penalties due to the existing runway length and taxiway configuration. The proposed changes would reduce costs for existing and anticipated aircraft while complying with FAA safety and design standards.
- There is a need to address and reduce incompatible land use immediately surrounding the terminal area in an effort to mitigate the impact of terminal operations on nearby residential areas.
- There is a need for modern and resilient terminal facilities to comfortably accommodate passenger needs with sufficient gate and apron capacity to efficiently manage existing and forecasted passenger demand and aircraft movement.
- There is a need for efficient and safe terminal roadways and curb frontages within the existing airport boundary to comply with TSA recommendations.
- There is a need to provide sufficient curbside access, adequate parking, and improved traffic flow.
- There is a need to utilize existing Airport property, to avoid land use impacts and environmental impacts to the extent necessary, to accomplish the project.

Project Description

The applicants propose the extension of Runway 02-20, drainage improvements and the replacement of the existing West Terminal with a new terminal ("East Terminal") on previously disturbed land on the east side of the Airport property. Additional elements associated with the East Terminal include associated roadways, parking lots, aprons and taxiways.

The proposed runway improvements (extension and drainage) include:

- Extension of Runway 02-20, which entails approximately an additional 639 feet at the Runway 02 end and 336 feet at the Runway 20 end.
- Adjusting the runway cross-section and profile to be compliant with FAA standards.
- Strengthen the existing runway to meet pavement design requirements of the existing aircraft fleet.
- Incidental grading, stormwater drainage and markings.
- Adjusting and calibrating navigation aids for both runway ends.
- Installing runway edge lighting, guidance signs, and other accessory features to fully comply with FAA design standards.

The proposed East Terminal development includes:

- New East Terminal Building
    - Construction of a new terminal building ("East Terminal") on the east side of the Airport with an approximate gross square footage (SF) (functional area) of 80,000 SF, with four gates and two additional boarding positions (6 total, all ground boarding).
    - Installation/relocation of security fencing and an access gate.
    - Incidental site work, including grading, stormwater management system and connection to existing on-site utilities such as electricity, water, wastewater, telephone and internet, and site work activities.

- New Apron at East Terminal
    - Construction of a new aircraft apron, with an area of approximately 450,000 SF, including ancillary site elements, that would include two Remain Overnight (RON) parking positions and six gate parking positions.
    - Construction of two access taxilanes from the terminal apron to an extended Taxiway A.
    - Incidental site work, including deicing pads, blast deflector fence, grading, stormwater management system and utilities.
    - Removal of a FAA-owned, decommissioned very high frequency omni-directional range (VOR).

- New Vehicle Parking and Access Road
    - Construction of approximately 2,000 new parking spaces with an approximate footprint of 1,042,000 SF, including building support areas, to serve the new East Terminal.
    - Construction of a causeway and a new two-lane (with potential to expand to four lane) airport access road from Proto Drive and associated improvements.
    - Installation of electrical lighting, wayfinding, signage, landscaping associated with new parking.
    - Incidental site work including grading, a stormwater management system and utilities.

The project takes into consideration the Airport's location within the 100-year floodplain and would incorporate resiliency measures, such as raising the finished floor elevation above the 100-year flood elevation, placing key building mechanical systems in a raised mezzanine or roof top location where they would be above flood elevation, and site design considerations to promote drainage and make facilities flood resistant. The proposed East Terminal would be constructed on piers, raising the finished floor elevation above mean sea level. The space below the finished floor elevation would be left open to allow floodwater to pass. Additionally, the project would take place within the airport property and within an

existing airport dedicated easement. The new access road would connect with existing Proto Drive; therefore, minimal construction would occur within public rights of way, and impacted roads would be in the immediate vicinity of the Airport. No private property is intended to be acquired as part of the project.

Alternatives Analysis

An in-depth analysis was performed and is contained within the Environmental Assessment (EA) prepared by McFarland Johnson, dated December 2023. The EA details the alternatives considered, and the evaluation process that was used to select the preferred alternative/project that appropriately addresses the needed facility improvements. Below is a summary of the alternatives analysis for the project.

Runway Extension

The original Master Plan Updated concept for the Runway 02-20 extension considered a 699-foot extension with a 235-foot displaced threshold at the southern end of the runway (Runway 02 end), and a 336-foot extension with a 336-foot displaced threshold at the northern end of the runway (Runway 20 end). The originally proposed runway length took into consideration existing and proposed aircraft utilizing the Airport and FAA Advisory Circular 150/5300-13A design requirements.

During the drafting of the EA, it was determined that the original conceptual design of this alternative would impact approximately 0.44 acre of tidal wetlands near the Runway 02 end. Therefore, additional various concepts were considered for this alternative. The final concept prioritized reducing the length of the proposed runway extension in an effort to avoid direct impacts to tidal wetlands. The selected concept avoids extending the runway into the wetlands while maintaining the design intent of extending Runway 02-20.

After further review and analysis, it was determined that extension at the southern end of the runway (Runway 02 end) design would have an approximate 639-foot extension. For the extension at the northern end of the runway (Runway 20 end), the proposed design would have an approximate 336-foot extension with a 336-foot displaced runway end threshold. The total proposed runway length would be 6,575 feet, which results in a 60-foot reduction in length compared to the original proposal in the 2021 Master Plan Update and avoids direct impacts (0.44 acre) to tidal wetlands. The proposed extension would provide the minimum runway length to meet FAA design standards, remedy the current runway limitations and provide HVN with the necessary infrastructure to accommodate the forecasted operational growth.

Terminal Area Development

The EA analyzed the replacement of the aging terminal building that exists today on the west side of the Airport. Several concepts were considered for this and are as follows:

- Construction of a new off-site airport. This alternative is not feasible or practicable, and it would not address the Purpose and Need of the Proposed Action and would result in higher environmental impacts.

- Relocation of various facilities near the existing Robinson Aviation facilities. Under this scenario, general aviation hangars, maintenance, the airport fire station and the air traffic control tower could be relocated to the west side, and the new terminal area could be constructed in their current location. This was deemed not feasible and impractical due to the expense of relocating all of those facilities. Additionally, the resulting land area would not be sufficient to accommodate

the Proposed Action. Finally, passenger access to this location would most likely be along Thompson Ave., which is impractical (see Access Road discussion below).

HVN is surrounded by residential and commercial development. Undeveloped property adjacent to airport property is almost entirely inland and tidal wetlands. Acquisition of land to construct the new terminal and related facilities entirely in upland areas would require extensive acquisition of occupied residences, commercial developments and relocation of their inhabitants. The massive acquisition of residential communities and/or businesses to allow the Proposed Action to occur entirely in uplands is impractical in terms of the cost and socio-economic impacts on the community. The Purpose and Need for the Proposed Action includes accomplishing the Project without land acquisition. Based on the unacceptable impacts to the community and not meeting the Purpose and Need, acquisition of nearby upland areas to accomplish the project is not considered reasonable or practicable and would result in higher overall environmental impacts. It was not considered further.

The west side location of the existing terminal does not provide sufficient space to develop facilities that meet the Purpose and Need. Nor does it address the land use compatibility concerns of the existing terminal, which is an important element of the Purpose and Need. Redevelopment of the west side was deemed not practical for these reasons. Additionally, developing similar sized facilities (in terms of gross square footage) on the west side within the airport property would require impacting an estimated 3.5 acres of tidal wetlands south of the existing terminal and enclosing approximately 1,200 linear feet of Tuttle Brook. These actions would result in a higher environmental impact than the impacts on the low function and value wetlands affected by the preferred alternative.

Federal Aviation Regulation Part 77 Transitional Surface restricts the height of objects along the sides of Runway 02-20. In considering the west side terminal location alternative, the tail heights of aircraft parked on the terminal apron and height of the proposed terminal are the limiting factors for the location of the terminal apron and terminal building. The terminal and apron cannot move closer to the runway because of the Transitional Surface. Considering the above, the redevelopment of the west side terminal facilities is not reasonable or practical and was not considered further.

- Construction of an East-Side Terminal. The initial concepts for the proposed east side terminal began with the Master Plan Update that was completed in 2021. The Master Plan shows a new terminal and associated facilities, but it predated the addition of Avelo to HVN's airline servicing. Therefore, the proposed facilities in the Master Plan were sized for much smaller activity levels than HVN is currently experiencing. Airline activity at HVN has surged beyond what was forecast, and it has become clear that the original terminal area concepts were undersized to meet demand. A larger terminal, terminal apron, and additional parking are needed to accommodate the demand.

  The final concept presented prioritized focusing on the terminal area development within a previously graded and disturbed area that was formerly occupied by the airfield east of Runway 02-20. The proposed East Terminal site is on a fill section created during the original construction of the airport. Since the original construction in 1929-1931, HVN has been subject to frequent and continuous land disturbance. Most of the airport land was historically filled during construction which converted all disturbed land into uplands. Land disturbances (e.g., excavation, fill, grading, stormwater, and mowing) have included the former use as a runway and taxiway system. Since

the decommissioning of Runway 14-32, land disturbances have included mowing, grading, and other typical airfield maintenance activities. This concept avoids physical land disturbance to the relatively undisturbed land and wetlands surrounding the former airfield, except for a proposed wetland crossing for the new access road to Proto Drive.

New Terminal Access Road

The Runway Safety Area (RSA) associated with the Runway 02-20 end extends from the proposed runway end to the north edge of the airport property. Public roads are prohibited within the RSA; therefore, a publicly accessible ground transportation link between the east and west side on airport property is not feasible.

The only possible ground vehicle access to the west side would be via Dodge Ave and Thompson Ave from the north, or via a new access road from Proto Drive. Access via Thompson Avenue is impractical because it would require terminal area traffic to be routed through residential neighborhoods along Dodge Avenue, Thompson Avenue, and intersecting streets. Additionally, a park (Memorial Field) is located at the critical intersection (Dodge and Thompson Avenues) where most terminal traffic would be routed. It is likely that intersection improvements, including turning lanes, would be required to accommodate the volume of expected traffic). This would entail acquisition of residential land and/or impacts to the Memorial Field, which is a Section 4(f) resource. Finally, access to the terminal area at Thompson Avenue would be the sole means of ingress and egress during an emergency, and multiple paths would be highly preferable. Access via Proto Drive would provide primary access to the terminal area, with Thompson Avenue available for emergency services use.

Using Thompson Avenue as the primary access does not address a key element of the project Purpose and Need of improving land use compatibility with the terminal area. Thompson Avenue access would essentially relocate the access and land use compatibility issues that currently exist on the west side and create an Environmental Justice concern by directing the associated impacts to an Environmental Justice community. Providing public access to the proposed east side terminal area via Thompson Ave was deemed impractical and would result in higher environmental impacts.

The proposed access road from Proto Drive to the east side terminal area utilizes an existing right of way. This access route largely addresses the land use compatibility concerns on the west side and Thompson Avenue by routing airport traffic along Hemingway Avenue and Proto Drive. The predominant land use along this existing corridor is commercial and industrial. Other alternatives would require land acquisition, which is contradictory to the project's Purpose and Need. Additionally, the Tweed New Haven Airport Authority (TNHAA) does not have the ability to use eminent domain in the Town of East Haven to acquire land or right of way; therefore, constructing the access road outside the existing right of way would be entirely contingent on acquiring the land from a willing seller. No practical alternative location is available for the access road.

The concept development for the access road considered various means of crossing the wetland complex located between the proposed terminal area and Proto Drive. Given the site constraints, it was determined that an approximately 300' long causeway over the wetlands would provide the optimum access while minimizing wetland impacts to extent possible. The resulting impact to the freshwater wetland with the proposed alternative would be approximately 0.1 acre, This alternative includes the development of the associated airfield and landside development, including circulation roadways, aircraft apron, taxilanes and other supporting facilities. The terminal aircraft apron would incorporate modern collection infrastructure for spent de-icing fluid. De-icing of commercial aircraft would occur on the

terminal apron, rather than the existing de-icing apron. This alternative provides parking for approximately 4,000 vehicles.

Avoidance and Minimization

Reasonable and practicable development ("build") alternatives are severely limited by several constraints present on airport property. Airside improvements must meet FAA design standards, which dictate the configuration and spacing requirements for the airside facilities. Development alternatives are further limited by space constraints and physical constraints, because alternatives development must focus on the previously developed airfield and preference for minimizing environmental impacts by focusing the wetland impacts on those areas with lowest ecological function and value.

Wetlands

Construction of the new terminal on the east side was common to all of the concepts. The first terminal area concept that fully addressed the EA Purpose and Need was finalized in August 2021. That concept closely resembled the Proposed Action; however, it proposed a total of 11.4 acres of wetland impact, including 2.1 acres of impact to the higher function and value wetlands surrounding the former Runway 14-32 airfield facilities. That concept was modified by eliminating some of the open space between the various facilities and reconfiguring some of the parking. Estimated wetland impacts were reduced by 1.9 acres to a total of 9.5 acres. Additional adjustments were made, most notably by relocating the airport access road to the existing right of way and utilizing a bridge to cross the wetland to Proto Drive. The proposed extension to Runway 02-20 was also reduced by approximately 60 feet. This reduction in the proposed runway length eliminated fresh water and tidal wetland (e.g., fill) impacts.

The net result after reducing the runway extension, relocating the access road and associated modifications to the internal circulation roads was the Proposed Action's 9.31 acres of wetland impact, a reduction from the first concept that fully met the project Purpose and Need. The ecological importance of wetlands often described in terms of their Functions and Values. The Functions and Values of the impacted wetlands are described in the attached Wetland Delineation Report.

Compensatory wetland mitigation requirements are established based on replacing the Functions and Values "lost" due to the proposed wetland impacts. As described in Wetland Delineation Report, the lower Function and Value wetlands are those that have formed on filled, graded, and maintained grassy areas comprised of former airfield. The higher Function and Value wetlands are less disturbed and not maintained. The alternatives development focused on confining wetland impacts to the disturbed lower Function and Value wetlands and avoiding impacting the higher Function and Value wetlands. Impacts to the higher function and value wetlands were reduced as design progressed.

Air Quality

The proposed terminal and aircraft apron are positioned as close to the runway/taxiway system as possible, without violating FAR Part 77 standards to minimize aircraft taxi time. Minimizing taxi time reduces the fuel used during taxi operations and provides a corresponding reduction in emissions and greenhouse gas emissions, thus reducing environmental impacts for the Proposed Action.

Incompatible Use/Environmental Justice

The proposed terminal apron is positioned on the south side of the disturbed area that was the former location of Runway 14-32 to maximize the distance between the aircraft apron and the nearby residential community to the northeast. This positioning minimizes nuisance noise and fumes from terminal apron aircraft operations in the nearby residential community to the north. Additionally, positioning the proposed terminal and parking garage between the terminal apron and the nearby residential community

provides a visual and acoustic barrier between the terminal apron and the residences. The long axis of the proposed terminal building and parking garage are roughly parallel to Burgess Street to maximize the acoustic benefits.

The proposed access road from Proto Drive to the east side terminal area utilizes an existing right of way. This access route largely addresses the land use compatibility concerns on the west side and Thompson Avenue by airport traffic along Hemingway Avenue and Proto Drive. The predominant land use along this existing corridor is commercial and industrial. Other alternatives would require land acquisition, which is contradictory to the project's purpose and need. Additionally, the east terminal complex is located in the Town of East Haven. Constructing the access road in a different location from the proposed right of way would require acquisition of the necessary land. Furthermore, the Tweed New Haven Airport Authority (TNHAA) does not have the ability to use eminent domain in the Town of East Haven to acquire land or right of way; therefore, constructing the access road outside the existing right of way would be entirely contingent on acquiring the land from a willing seller. No practical alternative location is available for the access road.

The terminal building, terminal apron, and parking garage are sited to optimize efficient aircraft operations (reducing noise and air emissions) and provide a buffer between aircraft operations and the nearby neighborhood. The proposed configuration strikes a careful balance between avoidance and minimization of wetland impacts and minimizing other environmental consequences such as impacts to the surrounding community, minimizing air and noise emissions, and eliminating the need for land acquisition to construct the proposed facilities. The facilities meet the minimum size requirements to meet the Purpose and Need and are configured for efficient operations. By focusing impacts on the lowest function and value wetlands, the proposed configuration strikes the optimal balance between these competing environmental consequences.

Resource Identification and Delineation

The existing wetlands at the Project Site were delineated and classified by FHI Studio in 2021 (FHI 2021), McCue Environmental (McCue 2024), and supplemented with information publicly available from the U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory mapper (NWI). The Cowardin classification system for wetland and deepwater habitats in the United States was used to classify the wetlands. Impact analysis has been developed based on the Cowardin classification of those wetlands as provided by the wetland scientists that identifies wetlands as freshwater (Inland Wetlands per CT regulations) or tidal/estuarine.

A Jurisdictional Determination was made by the US Army Corps of Engineers pursuant to Section 404 of the Clean Warer Act to identify the limits of jurisdiction for the project area. It was determined that wetlands identified as Wetland 4 and Wetland 5, which are infield wetlands, do not physically touch or abut jurisdictional water and do not have continuous surface connection to such waters via a non-jurisdictional conveyance; these wetlands are non-jurisdictional because they do not meet one or more categories of Waters of the US under 2023 Rule as amended. Wetland 6 was determined to be jurisdictional.

Connecticut state statutes from the 2012 Public Act No. 12-101 include a revision to the State's regulatory jurisdiction under CGS Section 22a-359 changing the regulatory jurisdiction limit from the "high tide line" to the area up to and including the elevation of the "coastal jurisdiction line" (CJL) as determined for the State's major tidal waterbodies. The CJL is not delineated in the field but is a set elevation for each municipality. It also states, "For any tidal, coastal or navigable waters of the state located upstream of a tide gate, weir, or other device that modifies the flow of tidal waters, the coastal jurisdiction line for such

tidal, coastal or navigable waters shall be the elevation of mean high water as found at the downstream location of such device".

A caveat to this statute exists for flood control structures, such as the tide gate on Morris Creek located approximately ¼ mile downstream of the airport to manipulate the flow of water through the tidal wetland system upstream of the tide gate and prevent flooding. In this case, mean high water (MHW) is used as the CJL when the purpose and function of an existing tide control structure reduces the normal reach of the tide upstream, as it does for the project site.

The MHW elevation for the project site was determined in 2008 when the alteration of the tide gate was permitted; since that time, for regulatory and permitting purposes, the agreed upon MHW and CJL for areas upstream of the tide gate within the airport boundary has been 3.5' NGVD which converts to 2.5' NAVD88.

Existing Watershed & Hydrology

The proposed activities lie within Connecticut's South Central Shoreline watershed, specifically in the Farm River local basin subregion. The surrounding water bodies include Morris Creek and Tuttle Brook. Morris Creek flows through a tide gate downstream of the Proposed Project Site before draining into Long Island Sound. The hydrology at the Proposed Project Site is affected by the existing tide gate, which regulates flow both into and out of the Airport's intertidal wetlands.

According to the CT DEEP Eco Viewer, the 12-digit Hydrologic Unit for the Watershed Boundary Dataset for the Proposed Project is: HUC12: 020302030000; Name: Long Island Sound Deep.

Wetlands

The existing salt marsh complex at the project site includes a wetland system with a network of excavated channels and marsh vegetation that is predominantly dominated by *Phragmites australis* (common reed), an invasive species that thrives in altered and low-salinity conditions. There is a limited expanse of mudflat habitat within the existing marsh complex.

According to the FHI 2021 delineation, seven wetlands were delineated within the project site at the Airport, six of which were determined to be inland wetlands, and one which is tidal, as depicted on attached plans. These wetlands provide various functions, including sediment retention, nutrient removal, and flood flow alteration. Some of the inland wetlands within the project site are constructed and linked to the Airport's drainage systems.

The wetland systems primarily drain as follows:

- Wetland 1 drains into Tuttle Brook, a tributary to Morris Creek, which ultimately leads to Long Island Sound.
- Wetlands 2-5 drain into Morris Creek, either through direct surface water or groundwater discharge, similarly leading to Long Island Sound.
- Wetland 7 is tidally influenced and drains directly into Morris Creek and Tuttle Brook, both of which are connected to Long Island Sound.

The following is a descriptive summary of the delineated wetland systems:

1. Wetland 1: Located at the northwestern limit of the Airport, Wetland 1 includes a reach of Tuttle Brook and associated vegetated wetlands. The brook runs through culverts under roads and service areas, and the surrounding wetlands are dominated by persistent emergent vegetation

like broadleaf cattail (*Typha latifolia*) and common reed (*Phragmites australis*). It provides functions such as sediment retention, nutrient removal, and wildlife habitat.

2. Wetland 2: Situated at the northeastern boundary of the Airport near the General Aviation parking area. This wetland includes a red maple (*Acer rubrum*) swamp adjacent to a ditched wetland system. It is seasonally flooded and dominated by stands of Phragmites. Functions include sediment retention and nutrient removal.
3. Wetland 3: A small, shallow basin wetland located between the Air Traffic Control Tower and the East Ramp. It mainly consists of palustrine emergent vegetation and collects runoff. The vegetation includes rushes and grasses, providing limited habitat but retaining water and sediments.
4. Wetland 4: This is a constructed shallow drainage area located near Runway 32 and Taxiways C and H. It consists of palustrine emergent vegetation and is primarily maintained as a mowed area. Its primary hydrological function is collecting runoff from the surrounding impervious surfaces. The wetland has limited ecological value.
5. Wetland 5: Similar to Wetland 4, Wetland 5 is also a shallow drainage area collecting sheet flow runoff. It is dominated by emergent vegetation and maintained as a lawn. Functions include stormwater retention and sediment control.
6. Wetland 6: This wetland has two distinct portions: 6A is a mowed palustrine emergent wetland, while 6B is a forested wetland bisected by Morris Creek. Wetland 6A has low ecological value due to regular mowing, while 6B, which includes more diverse vegetation and hydrology, has slightly higher ecological value.
7. Wetland 7: A large tidal wetland dominated by Phragmites. It is influenced by tidal waters from Morris Creek and Tuttle Brook and provides significant habitat for estuarine species. This wetland also serves important functions in flood flow alteration and fish/shellfish habitat.

In general, these wetlands provide various ecological functions within the salt marsh complex including water retention, nutrient removal, and wildlife habitat, although the more disturbed wetlands (such as Wetlands 4 and 5) have compromised ecological value. Refer to the wetland delineation reports for additional details on functions.

Project Impact

The unavoidable direct and indirect impacts that are under the jurisdiction of the State of Connecticut per Connecticut General Statutes Sections 22a-36 through Sec. 22a-45 and the USACE would result from the construction of the project are as follows:

Wetland #	NWI Classification Code	Impacts CT (acre)	Impacts USACE (acres)*
Wetlands 4, 5 and 6	PEM2J	8.74	4.94
Wetland 6	PSS	0.02	0.01
	PEM Phragmites	0.54	0.54
	PFO1E	0.01	0.01

Total		9.31	5.50

**Because USACE has determined that wetlands 4 and 5, which are PEM wetlands, are not Waters of the United States, the wetland impact that will require permitting under the USACE Individual Permit is 5.50 acres.*

Mitigation

The applicants are entering into Permittee Responsible Mitigation to mitigate for the impact of the proposed project. A Mitigation Plan has been prepared in accordance with the New England District Compensatory Mitigation Standard Operating Procedures dated December 29, 2020 (USACE, 2020) and in accordance with the requirements of 33 C.F.R. Parts 325 and 332, inclusive; it is included in the application package as Attachment 17.

Historically, mitigation has occurred within the airport boundary to address permit conditions from CTDEEP/OLISP permits #200003049-KZ, IW-2000-116, DIV-200003052 and WQC-20000305 within approximately 57 acres of tidal marsh on the west side of the airport along Dean Street and the east side of the airport south of Pig Farm Road as depicted on Figure 3 Prior Mitigation On-Site, that consisted of:

- Installation of approximately 6,700 linear feet of tidal channels that increased the functions of the restoration areas;
- Modification of the tide gate to allow for tidal flows up to 3.5' NGVD; and
- Spraying, cutting and mulching of Phragmites within the tidal restoration areas. In 2013, to address impacts to freshwater and tidal wetlands due to installation of a wildlife fence and installation of cross-culverts under Pig Farm Road, CTDEEP/OLISP Certificate of Permission (COP) #201304084-KZ included mitigation within the east side tidal wetland south of Pig farm Road by:
    - Installing 1,560 linear feet of new approximately 10' wide tidal finger channels; and
    - Tidal wetland enhancement and restoration of 3.8 acres of existing tidal wetlands by spraying, cutting and mulching Phragmites.

After reviewing the site's permitting history, CTDEEP determined that the proposed 28.5 acres of tidal wetland enhancement may be credited toward mitigation at a 5:1 ratio, offsetting 5.7 acres of impact. CTDEEP also determined that any remaining impact areas must be addressed through tidal wetland creation at a 1:1 ratio, resulting in an overall increase in wetland area. Proposed creation is 3.61 acres.

Construction and Erosion/Sediment Control Details

The Construction Sequences offered below are generalized – contractor means and methods may deviate slightly from what is below but plans specifically prohibit any changes that increase wetland impacts.

Construction Sequence – Runway

1. Install erosion control barriers, inlet protection barriers, check dams and construction entrances, prior to the start of any construction.
2. Strip topsoil and stockpile onsite. Install an erosion control perimeter around all stockpiles.
3. Remove existing utilities and protect utilities that will remain.
4. Construct and stabilize excavation and embankment.
5. Excavate pavement box.
6. Install all utilities including drainage and electrical.
7. Install select materials.

8. Inspect and maintain all erosion and sediment control measures. Minimize the extent and duration of exposure of disturbed areas.
9. Install paving course.
10. Install screened loam (4" min.) on all disturbed surfaces and apply permanent seeding.
11. Install pavement markings.
12. Remove trapped sediments from collector devices as appropriate and then remove temporary erosion control measures.
13. Restore contractor staging area and stockpile areas.

Construction Sequence - Terminal

1. Install erosion control barriers, inlet protection barriers, check dams and construction entrances, prior to the start of any construction.
2. Strip topsoil and stockpile onsite. Install an erosion control perimeter around all stockpiles.
3. Remove existing utilities and protect utilities that will remain.
4. Construct and stabilize excavation and embankment slopes
5. Excavate structure foundation.
6. Install foundation and structure.
7. Install all utilities including drainage, electrical and sewer.
8. Install select materials.
9. Inspect and maintain all erosion and sediment control measures. Minimize the extent and duration of exposure of disturbed areas.
10. Install paving course.
11. Install curbing and sidewalks.
12. Install screened loam (4" min.) on all disturbed surfaces and apply permanent seeding.
13. Install pavement markings.
14. Remove trapped sediments from collector devices as appropriate and then remove temporary erosion control measures.
15. Restore contractor staging area and stockpile areas.

Construction Sequence – Causeway

1. Install erosion control barriers, inlet protection barriers, check dams and construction entrances, prior to the start of any construction.
2. Strip topsoil and stockpile onsite. Install an erosion control perimeter around all stockpiles.
3. Remove existing utilities and protect utilities that will remain.
4. Install coffer dam from Proto Drive to midpoint between pad site.
5. Remove all material/soil down to existing sand layer.
6. Install sump and dewater to stilling basin on-site (through marsh).
7. Construct and stabilize excavation and embankment slopes.
8. Install temporary drainage culvert and associated structures.
9. Construct access road to subgrade.
10. Remove temporary sheet piling.
11. Repeat steps 4 through 10 from midpoint to pad site.
12. Install temporary coffer dam and excavate/remove temporary drainage culverts.
13. Install permanent culverts and headwall; remove temporary sheet piling.
14. Install all other utilities including drainage, electrical, sewer, comms, and security.
15. Install select materials.

16. Inspect and maintain all erosion and sediment control measures. Minimize the extent and duration of exposure of disturbed areas.
17. Install crushed aggregate and paving course.
18. Install curbing, sidewalks, and guiderail.
19. Install screened loam (4" min.) on all disturbed surfaces and apply permanent seeding.
20. Install pavement markings.
21. Install associated traffic signage.
22. Remove trapped sediments from collector devices as appropriate and then remove temporary erosion control measures.
23. Restore contractor staging area and stockpile areas.

Erosion and Sediment Controls have been developed for the project site as required to address the 2024 Connecticut Guidelines for Soil Erosion and Sediment Control, as revised, established pursuant to CGS section 22a-328. Those are shown on the plans provided in this application package.

SHEET 4 OF 174

NOTE:

THESE NOTES ARE INTENDED TO HIGHLIGHT THE REQUIREMENTS SET FORTH IN THE PROJECT SPECIFICATIONS, BUT, IN ALL CASES, REQUIREMENTS OF THE PROJECT SPECIFICATIONS SHALL GOVERN.

AIRPORT OPERATIONS COORDINATOR

THE OWNER SHALL PROVIDE AN OPERATIONS COORDINATOR WHO SHALL HAVE THE AUTHORITY TO OPEN AND CLOSE FACILITIES, ISSUE AND REMOVE NOTICE TO AIRMEN (NOTAM'S), AND TO COORDINATE WITH AIRPORT USERS. COORDINATION WITH NOTAM ISSUANCE & CONSTRUCTION ACTIVITIES SHALL BE THROUGH THE HOYLE TANNER ENGINEER.

THE CONTRACTORS ATTENTION IS DIRECTED TO THE CONSTRUCTION SAFETY AND PHASING PLAN REGARDING ACCESS TO THE JOB SITE. THE CONTRACTOR SHALL BE RESPONSIBLE TO ADHERE TO THE REQUIREMENTS OF THE TECHNICAL SPECIFICATIONS REGARDING AIRPORT SECURITY.

PAVEMENTS AND SAFETY AREAS. THE WORK VEHICLES ONCE INSIDE THE PERIMETER FENCING, SHALL REMAIN CLEAR OF THE ACTIVE RUNWAY, TAXIWAY AND SAFETY AREAS. WHEN NECESSARY, THE CONTRACTOR SHALL PROVIDE FLAGPERSONS AND RADIO CONTROL AS REQUIRED BY G-001 OF THE TECHNICAL SPECIFICATIONS. ALL HAUL ROUTES SHALL BE MAINTAINED PER SECTION "G-001 HAUL ROUTES" OF THE TECHNICAL SPECIFICATIONS.

NORMAL AIRPORT OPERATION WILL BE CONDUCTED ON THE AIRFIELD DURING CONSTRUCTION AND THE WORK SHALL BE CARRIED ON IN SUCH A MANNER AS NOT TO INTERFERE WITH THE NECESSARY OPERATION OF THE AIRPORT. THE CONTRACTOR SHALL TAKE ALL PRECAUTIONS NECESSARY TO ENSURE THE SAFETY OF OPERATING AIRCRAFT AS WELL AS HIS OWN EQUIPMENT AND PERSONNEL.

ALL AIRPORT PAVEMENTS SHALL BE KEPT CLEAR AND CLEAN AT ALL TIMES. THE CONTRACTOR SHALL HAVE A POWER VACUUM SWEEPER ON THE SITE WHEN REQUIRED TO SWEEP PAVEMENTS IN WORK AREAS AND HAUL ROUTES AS DIRECTED BY THE ENGINEER. SWEEPING WILL BE PERFORMED TO ELIMINATE ALL ROCKS, DIRT, MUD, AND OTHER DEBRIS CARRIED ONTO PAVEMENTS BY THE CONTRACTORS EQUIPMENT. THE CONTRACTORS EQUIPMENT CREATING THE FOD HAZARD MUST BE REPORTED TO THE ENGINEER OR THE AIRPORT OPERATIONS COORDINATOR. THE AIRPORT OPERATIONS COORDINATOR WILL THEN CLOSE THE AFFECTED AREA TO THE SATISFACTION OF THE AIRPORT OPERATIONS COORDINATOR.

AIRPORT SECURITY

THE CONTRACTOR SHALL COMPLY WITH ALL AIRPORT SECURITY REQUIREMENTS AS DIRECTED BY THE AIRPORT OPERATIONS COORDINATOR. WORK IN THE AIRPORT OPERATIONS AREA (AOA) WILL REQUIRE CRIMINAL BACKGROUND CHECKS. PARKING OF PERSONAL CARS AT THE WORK SITES WILL NOT BE PERMITTED. THE CONTRACTOR AS A SUBSIDIARY OBLIGATION, SHALL PROVIDE ADEQUATE AND SAFE TRANSPORTATION FROM THE WORK AREA. EMPLOYEES AND DRIVERS OF WORK VEHICLES WILL BE INSTRUCTED BY HIS/HER EMPLOYER FROM THE AREA WHERE THE CARS ARE PARKED, AS TO PROPER ACCESS ROADS AND WILL BE CAUTIONED THAT UNAUTHORIZED USE OF AIRCRAFT PAVEMENTS OR OTHER AREAS OUTSIDE THE DESIGNATED WORK AREA MAY LEAD TO THEIR ARREST AND SUBSEQUENT PAYMENT OF FINES. ALL ORDERS FOR MATERIAL SHALL INSTRUCT THE SUPPLIER OF THE PROCEDURES TO BE FOLLOWED.

THE CONTRACTOR SHALL SUBMIT TO THE ENGINEER WITHIN 10 DAYS AFTER SIGNING OF THE CONTRACT A WRITTEN METHOD OF OPERATIONS DETAILING THE PRECAUTIONS HE/SHE PROPOSES FOR THE CONTROL OF VEHICLE TRAFFIC INCLUDING FLAGPERSONS, SIGNS, ESCORTS AND ANY OTHER MEASURES HE/SHE PROPOSES. AFTER APPROVAL OF HIS/HER OPERATING SCHEDULE, THE CONTRACTOR SHALL FOLLOW IT EXPLICITLY. THE OWNER MAY CLOSE THE WORK AREA AT ANY TIME THIS SCHEDULE IS VIOLATED SO AS NOT TO ENDANGER AIRPORT OR AIRCRAFT OPERATIONS. SUCH CLOSURE SHALL NOT BE CONSIDERED A VALID REASON FOR EXTENDING THE CONTRACT TIME OR FOR ANY CLAIM FOR EXTRAS BY THE CONTRACTOR. ALL SECURITY ARRANGEMENTS SHALL BE SUBJECT TO THE APPROVAL OF THE OWNER. THE CONTRACTOR'S PERSONNEL AND VEHICLES WILL NOT HAVE ACCESS TO THE ENTIRE AIRPORT, BUT SHALL BE LIMITED TO THE WORK AREA AND THE STAGING AREA.

AIRCRAFT OPERATIONS AREA

THE CONTRACTOR SHALL KEEP HIS/HER PERSONNEL AND EQUIPMENT AT LEAST 250 FEET FROM THE CENTERLINE OF ACTIVE RUNWAYS AND AT LEAST 130 FEET FROM THE CENTERLINE OF ACTIVE TAXIWAYS AND APRONS FOR AIRCRAFT MOVEMENTS UNLESS PRIOR APPROVAL HAS BEEN OBTAINED.

OPEN TRENCHES OR EXCAVATIONS

THE CONTRACTOR WILL NOT BE PERMITTED TO LEAVE ANY TRENCHES OR OTHER EXCAVATIONS OPEN WHEN THE CONTRACTOR IS NOT ON THE SITE. IN ADDITION, NO EXCAVATIONS EXCEEDING 3 INCHES IN DEPTH SHALL BE LEFT OPEN WITHIN THE RUNWAY AND TAXIWAY SAFETY AREAS WHILE THE RUNWAYS, TAXIWAYS, AND APRONS ARE IN USE. UNLESS THE EXCAVATIONS ARE COVERED WITH APPROVED PLATES. STEEL PLATES SHALL BE CAPABLE OF BEARING THE HEAVIEST AIRCRAFT/VEHICLE USING THE AIRPORT/ROADWAY OVER THE SPAN IN WHICH THEY ARE TO BE USED. THE CONTRACTOR SHALL KEEP THE LENGTH OF OPEN TRENCHES COVERED WITH STEEL PLATES TO A MINIMUM, BUT IN NO CASE SHALL THE LENGTH EXCEED THE DISTANCE BETWEEN TWO ADJACENT MANHOLES OR CATCH BASINS.

ALL EXCAVATIONS SHALL BE BACKFILLED AND THE PAVEMENT REPAIRED AND PROPERLY CURED PRIOR TO THE AREA BEING REOPENED TO TRAFFIC.

PRIOR TO THE CLOSE OF WORK EACH NIGHT, THE CONTRACTOR SHALL ENSURE THAT THE WORK AREAS ARE GRADED AWAY FROM THE PAVEMENTS AT A MAXIMUM SLOPE OF 5% AND SHALL BE LEFT IN SUCH A CONDITION THAT IT WILL DRAIN READILY AND EFFECTIVELY AND WILL NOT POSE A HAZARD TO VEHICLES OR AIRCRAFT. NO PILES OF SOIL SHALL BE LEFT UNSPREAD, NO SHARP CHANGES IN GRADE WILL BE PERMITTED, AND THE SURFACE SHALL BE THOROUGHLY COMPACTED.

DISPOSAL OF SURPLUS AND UNSUITABLE MATERIALS

ALL DRAINAGE STRUCTURES AND PIPES, ALL BITUMINOUS CONCRETE PAVEMENT AND ALL PORTLAND CEMENT CONCRETE PAVEMENT SHALL BE LEGALLY DISPOSED OF BY THE CONTRACTOR OFF AIRPORT PROPERTY.

SURPLUS EXCAVATION MATERIALS, SHALL BE INCIDENTAL TO THE COST OF THE ITEM THAT GENERATES THE MATERIAL.

ALL EQUIPMENT, MANPOWER, TRAFFIC CONTROL, FLAGPERSON, SIGNS, BARRICADES, GATES, LEGAL POLICE OFFICERS (IF REQUIRED) AND OTHER ITEMS NECESSARY FOR THE SAFE AND EFFICIENT HAULING OF EXCESS MATERIALS IS THE RESPONSIBILITY OF THE CONTRACTOR AND INCIDENTAL TO THE COST OF THE ITEM WHICH GENERATES THE MATERIAL.

ALL UNSUITABLE MATERIALS SHALL BE LEGALLY DISPOSED OF OFF AIRPORT PROPERTY BY THE CONTRACTOR. NO SEPARATE MEASUREMENT AND PAYMENT WILL BE MADE FOR THE DISPOSAL, BUT RATHER THE DISPOSAL SHALL BE INCIDENTAL TO THE ITEM THAT GENERATES THE MATERIAL TO BE DISPOSED OF.

UNDERGROUND UTILITIES AND CABLES

THE APPROXIMATE LOCATIONS OF KNOWN UTILITIES AND UNDERGROUND CABLES ARE SHOWN ON THE CONTRACT DRAWINGS. PRIOR TO COMMENCEMENT OF ANY EXCAVATION THE CONTRACTOR SHALL COORDINATE ALL WORK ON AND IN THE VICINITY OF THE UNDERGROUND UTILITIES AND CABLES WITH THE FOLLOWING AGENCIES AS APPROPRIATE.

CALL BEFORE YOU DIG		(800) 922-4455
SOUTHERN CT GAS		(800) 513-8898
SBC SNET (TELEPHONE)		(203) 238-7407
UNITED ILLUMINATION, INC. (ELECTRIC)		(800) 722-5584
CT REGIONAL WATER AUTHORITY		(203) 562-4020
GREATER NEW HAVEN REGIONAL WATER		(203) 562-4020
POLLUTION CONTROL AUTHORITY (GNHWPCA)		(203) 466-5280
NEW HAVEN UTILITIES ENGINEER		(203) 946-8099
NEW HAVEN PUBLIC WORKS DEPT		(203) 946-7700
THE FEDERAL AVIATION ADMINISTRATION AIRWAYS		(203) 562-4020
FACILITY SECTOR FIELD OFFICE	(203) 464-8897 OR	(203) 605-7512
OPERATIONS AND MAINTENANCE		(203) 469-7773

THE CONTRACTOR SHALL REPAIR, AT HIS/HER OWN EXPENSE, ANY UNDERGROUND CABLES OR UTILITIES DAMAGED BY HIS/HER OPERATIONS INCLUDING ANY DAMAGE DONE BY DRIVING HIS/HER EQUIPMENT OVER EXISTING UNDERGROUND CABLES OR UTILITIES. THE REPAIR OF FAA CABLES SHALL BE INSPECTED AND APPROVED BY THE FAA.

RADIO CONTROL

THE CONTRACTOR SHALL HAVE TWO-WAY RADIO COMMUNICATION BETWEEN THE RADIO CONTROL VEHICLE AND HIS/HER FIELD OFFICE, SUPERINTENDENT'S VEHICLE, FLAGPERSONS, AND ESCORT VEHICLES. NO FAA OR OTHER AIRPORT FREQUENCY WILL BE USED FOR THIS PURPOSE. THESE RADIOS SHALL BE PURCHASED, INSTALLED, MAINTAINED AND OPERATED AT THE CONTRACTOR'S EXPENSE.

RADIO CONTROL WILL BE REQUIRED WHENEVER THE CONTRACTOR IS WORKING IN OR ADJACENT TO THE AIRCRAFT OPERATIONS AREAS. RADIO CONTROL AND FLAGPERSONS WILL BE REQUIRED WHENEVER THE CONTRACTOR'S VEHICLE AND EQUIPMENT ARE ON OR CROSSING ACTIVE RUNWAYS, TAXIWAYS OR APRONS.

TWEED NEW HAVEN AIRPORT UNICOM FREQUENCY IS 122.950 MHz.

FLAGPERSON

THE CONTRACTOR SHALL PROVIDE FLAGPERSONS AT EACH ACTIVE RUNWAY, TAXIWAY AND APRON PAVEMENT BEING CROSSED BY HIS/HER EQUIPMENT TO ASSURE THAT MOVING AIRCRAFT ARE GIVEN THE RIGHT-OF-WAY AT ALL TIMES. FLAGPERSONS AND EQUIPMENT ARE TO MEET CURRENT MUTCD STANDARDS. AIRPORT RESERVES THE RIGHT TO SHUTDOWN WORK ACTIVITIES, WITHOUT PENALTY, FOR NON-CONFORMANCE TO REGULATIONS OR FOR UNSAFE CONTROLS. FLAGPERSONS SHALL ALSO BE REQUIRED WHEN VEHICLES ON A SERVICE ROAD ARE CROSSING THE APPROACH TO AN ACTIVE RUNWAY IN ADDITION TO PREVIOUSLY SPECIFIED RADIO CARS. THE FLAGPERSONS SHALL BE CAREFULLY SELECTED AND FULLY INSTRUCTED AS TO THEIR DUTIES IN REGULATING THE CONTRACTOR'S EQUIPMENT CROSSING THE AIRCRAFT PAVEMENT. THEY SHALL ALSO BE PROVIDED WITH BROOM, SHOVEL, AND BRUSH AND INSTRUCTED TO REMOVE ANY DEBRIS THAT MIGHT BE LEFT BY THE EQUIPMENT ON THE AIRCRAFT PAVEMENT WHERE IT MIGHT BE INGESTED BY AN AIRCRAFT ENGINE. EACH FLAGPERSON SHALL BE PROVIDED WITH, AND SHALL WEAR AT ALL TIMES THEY ARE DIRECTING TRAFFIC, AN APPROVED STRIPED VEST OF A TYPE SPECIFICALLY DESIGNED FOR USE BY TRAFFIC CONTROL PERSONNEL.

BARRICADES

THE CONTRACTOR SHALL FURNISH AND PLACE BARRICADES AS REQUIRED TO CLEARLY DEFINE AND CLOSE WORK AREAS TO AIRCRAFT OPERATIONS, SEE CONSTRUCTION PHASING AND SAFETY PLANS.

THE BARRICADES SHALL BE PLACED AS SHOWN ON THE PLANS OR AS DIRECTED BY THE ENGINEER. THE BARRICADES SHALL BE LOW PROFILE TYPE, AS LOW AS POSSIBLE TO THE GROUND, EASILY COLLAPSIBLE UPON CONTACT WITH AN AIRCRAFT, AND OF LOW MASS. THE BARRICADES SHALL BE BRIGHT ORANGE AND WHITE AND WHEN USED TO DEFINE HAZARDOUS AREAS AT NIGHT SHALL BE LIGHTED IN A MANNER APPROVED BY THE PROGRAM MANAGER AND OWNER. NO OPEN FLAME LIGHTING SHALL BE USED. ALL TEMPORARY LIGHTS AND BARRICADES SHALL BE WEIGHTED AGAINST JET BLASTS (100 MPH).

HAUL ROUTES

PRIOR TO THE START OF CONSTRUCTION, THE CONTRACTOR SHALL PREPARE A PLAN SHOWING PROPOSED HAUL ROUTES FOR THE APPROVAL OF THE ENGINEER. WHEN A PUBLIC HIGHWAY MUST BE USED FOR HAUL ROUTES, IT WILL BECOME THE CONTRACTOR'S RESPONSIBILITY TO OBTAIN THE PROPER PERMITS NEEDED FOR THIS FUNCTION AND TO OBEY RULES AND REGULATIONS PERTINENT TO THE PUBLIC HIGHWAYS.

HAUL ROUTES ON THE AIRPORT SHALL BE AS APPROVED BY THE ENGINEER. THE CONTRACTOR SHALL STAKE OR OTHERWISE DELINEATE THE HAUL ROUTES. THE CONTRACTOR'S VEHICLES AND EQUIPMENT SHALL OPERATE WITHIN THE LIMITS OF THE MARKED HAUL ROUTE. CONTRACTOR'S VEHICLES WILL NOT BE ALLOWED ACCESS TO PORTIONS OF THE AIRPORT OTHER THAN THE WORK AND STAGING AREAS.

ALL PAVED HAUL ROADS OR ACCESS ROADS SHALL BE KEPT CLEAN AT ALL TIMES TO PREVENT THE ACCUMULATION OF DIRT AND MUD AND THE GENERATION OF DUST BY SWEEPING, WASHING OR OTHER METHODS AS DIRECTED BY THE OWNER. UNPAVED HAUL ROADS, IF ANY, SHALL BE MAINTAINED BY BLADING AND FILLING WHEN DIRECTED BY THE OWNER AND DUST SHALL BE CONTROLLED AT ALL TIMES.

PRIOR TO THE START OF WORK, THE CONTRACTOR SHALL TAKE AND DELIVER TO THE OWNER, PHOTOGRAPHS OF ALL PROPOSED HAUL ROUTES. VIEWS SHALL BE RESTORED TO THEIR ORIGINAL CONDITION OR BETTER BEFORE THE CONTRACT WILL BE CONSIDERED COMPLETE. ALL RESTORATION AND DUST CONTROL ON HAUL ROADS SHALL BE AT THE CONTRACTOR'S EXPENSE.

AIRPORT OPERATIONS AND SAFETY REQUIREMENTS

THE CONTRACTOR SHALL STAKE AND PERMANENTLY MARK ON THE GROUND WITH A READILY RECOGNIZABLE MARKING (GRADE STAKES W/YELLOW ROPE, LIT BARRICADES) THE RESTRICTION LINES PARALLEL TO THE TAXIWAYS AND RUNWAYS ADJACENT TO THE WORK AND THE APPROACH ZONE LIMITS SO THAT PERSONNEL CAN READILY RECOGNIZE THE LIMITATIONS.

WHEN PERMISSION HAS BEEN GRANTED TO WORK INSIDE THESE LIMITS, NO EQUIPMENT SHALL BE LEFT WITHIN THE LINES WHEN NOT ACTUALLY WORKING. DURING BREAKS IN THE DAILY WORK SCHEDULE, NIGHTS, WEEKENDS, OR THE DAYS WHEN WORK IS NOT PERMITTED OR IS NOT PROGRESSING, THE EQUIPMENT SHALL BE LOCATED OUTSIDE OF THESE RESTRICTION LINES. ALL BOOMS SHALL BE LOWERED WHEN THE EQUIPMENT IS NOT IN OPERATION. NO CONSTRUCTION OPERATIONS, INCLUDING AN OPEN FLAME SUCH AS WELDING OR BURNING, SHALL BE CARRIED ON NEAR ANY AIRCRAFT.

EACH CONTRACTOR'S MOTORIZED VEHICLE OPERATING IN AN AIRCRAFT MOVEMENT AREA SHALL BE EQUIPPED WITH AN AMBER FLASHING LIGHT AND A 3-FOOT SQUARE FLAG CONSISTING OF INTERNATIONAL ORANGE AND WHITE SQUARES NOT LESS THAN ONE FOOT SQUARE DISPLAYED IN FULL VIEW ABOVE THE VEHICLE.

IN ADDITION, ALL CONTRACTOR'S VEHICLES SHALL HAVE THE COMPANY IDENTIFICATION PLAINLY VISIBLE ON BOTH SIDES OF THE VEHICLE IN ORDER TO IDENTIFY THE VEHICLE.

MAINTENANCE OF THE CONSTRUCTION SITE

THE CONTRACTOR SHALL KEEP THE CONSTRUCTION SITE FREE OF PAPER, BOXES, CLOSED CONTAINERS AND OTHER DEBRIS WHICH COULD BE BLOWN ONTO THE RUNWAYS AND TAXIWAYS. LOOSE TRASH PLACED IN TRUCK BED IS PROHIBITED.

THE CONTRACTOR SHALL MAINTAIN, AT THE CONSTRUCTION SITE, THE EQUIPMENT FOR THE APPLICATION OF WATER TO CONTROL DUST WITHIN THE CONSTRUCTION SITE AND ON HAUL ROADS. THE EQUIPMENT SHALL BE EQUIPPED WITH A SHUT-OFF CONTROL VALVE, WHICH CAN BE OPERATED FROM THE CAB BY THE OPERATOR. THE CONTRACTOR SHALL APPLY WATER FOR DUST CONTROL AS NECESSARY TO PREVENT DUST FROM THE CONSTRUCTION SITE AND/OR HAUL ROADS FROM BEING A HAZARD TO AIRCRAFT AND FROM BEING A NUISANCE TO THE PUBLIC AND AS DIRECTED BY THE ENGINEER.

SHEET 5 OF 174

GENERAL AIRFIELD ELECTRICAL NOTES:

ITEMS AND REQUIREMENTS INCLUDED IN THESE ELECTRICAL NOTES ARE INCIDENTAL TO THE COST OF THIS PROJECT AND SHALL NOT BE CONSIDERED SEPARATE PAY ITEMS, UON.

1. THE ELECTRICAL UTILITY SERVICE PROVIDER IS THE UNITED ILLUMINATING COMPANY (UI). COORDINATE ALL WORK WITH UTILITY.

2. DARK OR HEAVY LINES AND SYMBOLS INDICATE ELECTRICAL MATERIALS AND EQUIPMENT TO BE FURNISHED, INSTALLED, PROVIDED, OR EXISTING ELECTRICAL INSTALLATION TO BE REMOVED, MODIFIED, ADJUSTED OR REINSTALLED. DARK OR HEAVY LINES AND SYMBOLS ALSO INDICATE EQUIPMENT SPECIFIED ON OTHER NON-ELECTRICAL DRAWINGS THAT SHALL BE INSTALLED, CONNECTED AND/OR COMMISSIONED PER ELECTRICAL DRAWINGS AND SPECIFICATIONS.

3. LIGHT OR HALFTONE LINE AND SYMBOLS INDICATE EXISTING ELECTRICAL MATERIALS AND EQUIPMENT TO REMAIN. NON-ELECTRICAL MATERIALS AND EQUIPMENT TO BE FURNISHED, INSTALLED, PROVIDED, OR DEMOLISHED UNDER THIS CONTRACT SHOWN ON OTHER DRAWINGS MAY NOT BE SHOWN OR SHOWN AS LIGHT / HALFTONE LINES AND SYMBOLS. REFER TO NON-ELECTRICAL DRAWINGS FOR ASSOCIATED SCOPE OF WORK.

4. UNLESS DIMENSIONED, LOCATIONS INDICATED FOR DEVICES AND EQUIPMENT ARE APPROXIMATE AND SHALL BE FIELD VERIFIED AND COORDINATED WITH THE ENGINEER. DRAWINGS ARE DIAGRAMMATIC AND ARE NOT INTENDED TO INCLUDE EVERY DETAIL OF CONSTRUCTION, PHASING, MATERIALS, METHODS OF INSTALLATION, CIRCUITRY, EQUIPMENT, OR EXACT ROUTING OF CIRCUITRY. TAKE ACTUAL FIELD MEASUREMENTS AT THE JOB SITE IN LIEU OF SCALING THE DRAWINGS.

5. CIVIL DATA (BACKGROUNDS) SHOWN ON ELECTRICAL DRAWINGS FOR REFERENCE ONLY. REFER TO CIVIL DRAWINGS FOR DRAINAGE, PAVING DETAILS, PAVEMENT MARKING PLANS, ETC.

6. UPON REQUEST, SUBMIT TO THE ENGINEER DIMENSIONED INSTALLATION LAYOUT DRAWINGS FOR APPROVAL.

7. REPORT ALL CONFLICTS WITHIN THE CONTRACT DOCUMENTS OR WITH EXISTING CONDITIONS IN THE FIELD TO THE ENGINEER WITHIN 24 HOURS. SUBMIT PHOTOGRAPHS AND/OR SKETCHES TO CLARIFY CONDITIONS UPON REQUEST.

8. OBTAIN ALL PERMITS ASSOCIATED WITH THE WORK. PERMITS SHALL BE OBTAINED IN A TIMELY FASHION TO ENSURE NO NEGATIVE IMPACT ON THE CONSTRUCTION SCHEDULE. NOTIFY THE CODE ENFORCING AUTHORITIES AND SCHEDULE ALL REQUIRED INSPECTIONS WITH THE ALL AUTHORITIES HAVING JURISDICTION (E.G. FAA, STATE, COUNTY, CITY, LOCAL, ETC).

9. LIGHTING SYSTEMS FOR OPEN AIRCRAFT OPERATIONAL AREAS (AOA) SHALL REMAIN READY FOR OPERATION DURING INSTRUMENT FLIGHT RULES (IFR) WEATHER CONDITIONS AND FROM DUSK TO DAWN. COORDINATE AT LEAST 48 HOURS IN ADVANCE ANY AND ALL INTERRUPTIONS OF ELECTRICAL SERVICES TO ACTIVE LIGHTING CIRCUITS WITH THE RPR AND OWNER.

10. CONTACT UTILITIES PRIOR TO STARTING WORK AND UTILIZE A UTILITY LOCATING SERVICE TO IDENTIFY ALL UNDERGROUND SERVICES WITHIN THE LIMITS OF CONSTRUCTION. MAINTAIN ALL UTILITY MARKINGS WITHIN THE LIMITS OF CONSTRUCTION.INSTALLATIONS WITHIN FIVE (5) FEET OF ANY KNOWN OR SUSPECTED UNDERGROUND UTILITY SHALL BE HAND DUG.

11. ALL AIRFIELD LIGHT FIXTURES, SIGNS, CABLING, CONNECTORS AND OTHER APPLICABLE PRODUCTS SHALL BE LISTED ON LATEST EDITION OF THE FAA ADVISORY CIRCULAR 150/5345-53 ADDENDUM.

12. CONTRACTOR SHALL BE REQUIRED TO CONNECT TO EXISTING CONDUIT, LIGHT FIXTURES, SIGNS, PULLCANS, AND OTHER UNDERGROUND STRUCTURES. MAKE CONNECTION TO EXISTING STRUCTURES USING MANUFACTURED COUPLINGS.

13. PROVIDE THE INVENTORY OF SPARE FIXTURES OF 2 EACH TYPE OF LIGHT FIXTURE AND LENS COMBINATION. ALL EQUIPMENT NOT USED SHALL BE TURNED OVER TO THE OWNER TO SUPPLEMENT STOCK OF SALVAGED AND EXISTING EQUIPMENT. (INCIDENTAL TO RELATED PAY ITEMS L-125)

14. PROVIDE 5% BREAKAGE AND CONSUMABLES EXTRA PARTS FOR EACH TYPE AND SIZE OF LIGHT FIXTURE PROVIDED AND NO LESS THAN TWO (2) AS OUTLINED BELOW (INCIDENTAL TO RELATED PAY ITEMS L-125):

    - L-830 ISOLATION TRANSFORMERS OF EACH SIZE
    - LENS / GLASSWARE ASSEMBLY REPLACEMENT KITS
    - GASKETS, SEALS, AND O-RINGS
    - FRANGIBLE/BREAKABLE COUPLINGS FOR ELEVATED LIGHT FIXTURES
    - BASEPLATE FOR ELEVATED LIGHT FIXTURES
    - TRIM RING FOR IN-PAVEMENT FIXTURES
    - SPACERS OF EACH SIZE FOR IN-PAVEMENT FIXTURES
    - BASE CAN BOLTS AND LOCK WASHERS OF EACH TYPE
    - FLOOR FLANGES FOR SIGNS
    - LED MODULES AND PRINTED CIRCUIT BOARDS (PCB) FOR LED LIGHT FIXTURES
    - LIGHT ENGINE/DRIVER FOR LED SIGNS
    - POWER SUPPLY ASSEMBLY AND ACCESSORIES FOR LED SIGNS
    - LIGHT ENGINE TESTER FOR LED SIGNS

15. NEW AND EXISTING FIXTURE IDENTIFICATION NUMBERS SHALL BE ASSIGNED BY THE ENGINEER AND OWNER, UON. CONFIRM FIXTURE TAG LABELS WITH ENGINEER AND OWNER PRIOR TO ORDERING AND INSTALLATION.

16. CONDUCT INSULATION RESISTANCE TESTS (MEGGER) ON EACH CIRCUIT SCHEDULED TO BE ALTERED PRIOR TO COMMENCING WORK. SUBMIT TEST RESULTS TO THE ENGINEER IN ELECTRONIC PDF FORMAT. IMMEDIATELY NOTIFY THE OWNER AND ENGINEER IF ANY EXISTING CABLE MEGGER TESTS RETURN TEST BELOW 10 MEGOHMS. TESTS SHALL BE PERFORMED IN THE PRESENCE OF THE RPR.

17. DO NOT ROUTE CABLES WITH DIFFERENT VOLTAGE INSULATION RATINGS IN THE SAME CONDUIT. PROVIDE SEPARATE DUCTS FOR EACH CLASS OF CIRCUIT/CABLING:
    - ELECTRICAL: AIRFIELD CONSTANT CURRENT CIRCUITS (5KV)
    - ELECTRICAL: LOW VOLTAGE - VOLTAGE DRIVEN POWER CIRCUITS (<600V)
    - ELECTRICAL: MEDIUM VOLTAGE - VOLTAGE DRIVEN POWER CIRCUITS (5KV)
    - ELECTRICAL: MEDIUM VOLTAGE - VOLTAGE DRIVEN POWER CIRCUITS (15KV)
    - ELECTRICAL: MEDIUM VOLTAGE - VOLTAGE DRIVEN POWER CIRCUITS (25KV)
    - TELECOM: SIGNAL AND CONTROL CIRCUITS - COPPER
    - TELECOM: SIGNAL AND CONTROL CIRCUITS - FIBER

18. LOCATE UNDERGROUND ELECTRICAL STRUCTURES (MANHOLES, HAND HOLES, PULLCANS, ETC.) OUTSIDE THE SAFETY AREAS (RSA/TSA) WHERE POSSIBLE, UON. UNDERGROUND ELECTRICAL STRUCTURES WITHIN SAFETY AREAS MUST BE RATED FOR AIRCRAFT TRAFFIC LOADS (AC RATED).

19. COORDINATE LOCATIONS OF UNDERGROUND ELECTRICAL STRUCTURES (MANHOLES, HAND HOLES, PULLCANS, ETC.) WITH GRADING AND DRAINAGE PLANS TO AVOID INSTALLATION IN DRAINAGE SWALES, DITCHES, OR LOW ELEVATIONS WHERE WATER WILL POND ON TOP OF THE STRUCTURES.

20. VOLTAGE DRIVEN FEEDER AND BRANCH CIRCUIT CONDUCTORS SHALL BE SIZED TO LIMIT VOLTAGE DROP TO A MAXIMUM OF 3% FOR BRANCH CIRCUITS AND A MAXIMUM OF 5% TOTAL VOLTAGE DROP ON THE COMPETE FEEDER AND BRANCH CIRCUIT PATH.

21. CONDUCTORS FOR FEEDERS AND BRANCH CIRCUITS SHALL BE ADJUSTED AS NECESSARY TO LIMIT VOLTAGE DROP TO 5% ON THE COMPLETE CIRCUIT PATH FROM A SEPARATELY DERIVED SOURCE TO THE FARTHEST POINT AND 3% ON BRANCH CIRCUITS CONDUCTORS. VERIFY VOLTAGE DROPS BASED ON THEIR PREFERRED CONDUIT AND WIRE ROUTING.
    - 240V BRANCH CIRCUIT CONDUCTORS SERVING A LOAD EXCEEDING 125 FEET FROM THE PANEL SHALL NOT BE SMALLER THAN #10AWG.
    - 120V BRANCH CIRCUIT CONDUCTORS SERVING A LOAD EXCEEDING 50 FEET FROM THE PANEL SHALL NOT BE SMALLER THAN #10AWG.

22. PRIOR TO INSTALLATION, FIELD STAKE AIRFIELD LIGHTS, AIRFIELD SIGNS, HAND HOLES, PULLCANS, AND OTHER EQUIPMENT FOR ENGINEER'S REVIEW. DISCREPANCIES IN ALIGNMENT OR LOCATION SHALL BE RESOLVED WITH THE ENGINEER PRIOR TO INSTALLATION. NOTIFY ENGINEER IMMEDIATELY IF STAKED ITEMS ARE LOCATED IN DRAINAGE SWALES OR DITCHES.

23. WHERE UNDERGROUND ELECTRICAL STRUCTURES (MANHOLES, HAND HOLES AND PULLCANS) ARE TO BE PLACED AT EXISTING DUCT OR CONDUIT CROSSINGS, THE DUCT SHALL BE EXTENDED TO THE NEW STRUCTURE. EXISTING CIRCUITS SHALL BE REROUTED THROUGH THE NEW UNDERGROUND STRUCTURE. CONDUIT AND CIRCUIT REROUTING SHALL BE INCIDENTAL TO THE COST OF THE NEW UNDERGROUND STRUCTURE.CONTRACTOR SHALL BE REQUIRED TO CONNECT TO EXISTING CONDUIT, MANHOLES, HAND HOLES, JUNCTION BOXES, PULLCANS, SIGNS, AND LIGHT FIXTURES, ETC. WORK NECESSARY TO COMPLETE EXISTING-NEW CONNECTIONS SHALL BE CONSIDERED INCIDENTAL TO THE PROJECT. CONNECT PROPOSED CIRCUITS TO THE EXISTING CIRCUITS AS SHOWN. ALL WORK REQUIRED TO MAKE THE CONNECTIONS TO EXISTING CIRCUITS SHALL BE INCIDENTAL TO THE PROJECT (I.E., PUNCHING INTO EXISTING MANHOLES FOR CONDUITS).

24. ALL AIRFIELD LIGHTS ASSOCIATED WITH A RUNWAY, TAXIWAY OR APPROACH LIGHTS SHALL LINE UP IN A STRAIGHT LINE. NOTIFY ENGINEER IMMEDIATELY IF VARIANCES DO NOT PERMIT LIGHTS TO BE INSTALLED IN A STRAIGHT LINE OR WHERE THERE IS DIFFICULTY MAINTAINING THE INSTALLATION TOLERANCES INDICATED.

25. AIRFIELD LIGHTING SETBACK AND TOLERANCES:
    - RW/TW EDGE LIGHTS - 10'-0" FROM OUTSIDE EDGE OF PAINT MARKING OR EDGE OF AIRCRAFT RATED PAVEMENT
        - ± 1□ LATERAL TOLERANCE
        - ± 1□ LONGITUDINAL TOLERANCE
        - ± 1□ HEIGHT TOLERANCE

26. INSTALL, POSITION AND ORIENT AIRFIELD LIGHT FIXTURES TO OBTAIN SPECIFIED VERTICAL ALIGNMENT, ROTATION, AND AZIMUTH ALIGNMENT PER FAA AC 150-5340-30.

27. CONFIRM THE LOCATION AND ALIGNMENT OF HOLD LINES PRIOR TO INSTALLATION OF AIRFIELD SIGNS. INSTALL SIGNS PERPENDICULAR TO THE RUNWAY OR TAXIWAY CENTERLINE, UON. SIGN STATIONS AND OFFSETS ARE REFERENCED TO THE CENTER OF THE SIDE CLOSEST TO THE EDGE OF PAVEMENT.

28. PRIOR TO PULLING CABLES, CLEAN/SWAB OUT EXISTING DUCTS OF DEBRIS USING A BRUSH AND DUCT MANDREL OR OTHER METHOD APPROVED BY THE ENGINEER. UTILIZE THE NEXT LARGER TRADE SIZE MANDREL TO PROVE EXISTING CONDUIT INTEGRITY

29. SEAL CONDUIT ENTERING L-867 AND L-868 LIGHT BASES WITH DUCT SEAL FROM THE INSIDE OF THE LIGHT BASE.

30. PROVIDE A MINIMUM OF 3'-0" CABLE SLACK FOR EACH CABLE ENTERING EACH PULLCAN AND LIGHT FIXTURE BASE CAN SUCH THAT EACH CONNECTION AND/OR FUTURE CONNECTION TO A CABLE MAY BE MADE OUTSIDE OF THE PULLCAN OR LIGHT FIXTURE BASE.

31. NO COMPONENT OF AIRFIELD LIGHTING CIRCUITS (E.G. CABLE, CONNECTOR, TRANSFORMER, ETC) SHALL BE INSTALLED EXPOSED ABOVE GROUND INCLUDING AT FIXTURES BETWEEN THE TRENCH, THE LIGHT FIXTURE BASE, AND WHERE THE CABLE ENTERS THE DEVICE. CABLES SHALL BE ENCLOSED IN LIQUID-TIGHT RIGID OR FLEXIBLE CONDUIT WITH FRANGIBLE COUPLING(S) AT GRADE OR HOUSING COVER.

32. PRIOR TO ENERGIZING, FEEDERS, SUB-FEEDERS AND SERVICE CONDUCTOR CABLES SHALL BE TESTED FOR ELECTRICAL CONTINUITY AND SHORT CIRCUITS. SUBMIT TESTS TO THE RPR, ENGINEER, AND OWNER.

33. TEST 600V RATED CABLES IN INSTALLED POSITION DISCONNECTED TO EQUIPMENT WITH A 500V MEGGER (PHASE-TO-PHASE AND PHASE-TO-GROUND) TO VERIFY INSULATION INTEGRITY. THIS WORK SHALL BE PERFORMED IN THE PRESENCE OF THE RPR. TEST RESULTS BELOW 25 MEGOHMS SHALL BE REPLACED BY THE CONTRACTOR AT NO COST. TROUBLESHOOT AND INSPECT FAILED SEGMENTS TO DETERMINE CAUSE OF LOW INSULATION READING AND LOG IN TESTING REPORT. SUBMIT TEST RESULTS TO THE ENGINEER IN ELECTRONIC PDF FORMAT.

34. EACH L-830 ISOLATION TRANSFORMER, L-823 CONNECTOR KIT, AND 5KV CABLE INSTALLED ON THIS PROJECT AS A COMPLETE OR PARTIAL CIRCUIT SHALL BE TESTED AS AN OPERABLE CIRCUIT SYSTEM. PROVIDE 1000V MEGGER INSULATION TEST ON EACH NEW AIRFIELD LIGHTING CIRCUIT SEGMENT AND TOTAL CIRCUIT SEGMENT. THIS WORK SHALL BE PERFORMED IN THE PRESENCE OF THE RPR. ANY NEW CABLE SEGMENT WITH TEST RESULTS BELOW 50 MEGOHMS SHALL BE REPLACED BY THE CONTRACTOR AT NO COST. TROUBLESHOOT AND INSPECT FAILED SEGMENTS TO DETERMINE CAUSE OF LOW INSULATION READING AND LOG IN TESTING REPORT. REFER TO FAA AC 150-5340-26 FOR ADDITIONAL INFORMATION ON TROUBLE SHOOTING 5KV CONSTANT CURRENT SERIES CIRCUITS. SUBMIT TEST RESULTS TO THE ENGINEER IN ELECTRONIC PDF FORMAT.

35. PROVIDE HEAVY DUTY 2 SINGLE CHANNEL CABLE GUARD FOR FULL LENGTH OF ALL TEMPORARY 5KV CABLING ROUTED OVER PAVEMENT. CABLE GUARD SHALL BE RATED TO WITHSTAND 19,000 LBS. OF LOAD BEARING CAPACITY PER TIRE. CABLE GUARD WILL BE TURNED OVER TO OWNER AT THE COMPLETION OF THE PROJECT. (ELASCO MIGHTYGUARD MG1200 OR APPROVED EQUIVALENT)

36. PROVIDE ROT AND MILDEW RESISTANT PULL ROPE (MINIMUM 300-POUND TEST) IN EMPTY UNDERGROUND CONDUITS.

37. THE CONTRACTOR MAY DIRECTIONAL DRILL ALL CONDUITS AT NO ADDITIONAL COST TO THE PROJECT. OPEN CUT HAND EXCAVATION IS REQUIRED IN THE LOCATION OF CONFLICTING UTILITIES.

38. TURN OVER COMPLETED MASTER MARKUP DRAWING SET TO THE ENGINEER.

39. THE OWNER WILL CONDUCT A COMMISSIONING FLIGHT INSPECTION ON ALL LIGHT SYSTEMS COVERED BY FAA ORDER 8200.1 FLIGHT INSPECTION MANUAL. THE CONTRACTOR SHALL BE PRESENT ON-SITE DURING FLIGHT INSPECTION. THE CONTRACTOR SHALL MAKE FIELD MODIFICATIONS AS REQUIRED DURING THE FLIGHT INSPECTION TO IMMEDIATELY ADDRESS DEFICIENCIES TO PREVENT THE NEED FOR ADDITIONAL FLIGHT INSPECTIONS. THE ENGINEER SHALL ESTABLISH RESPONSIBILITY FOR ANY DEFICIENCIES THAT CANNOT BE IMMEDIATELY ADDRESSED DURING FLIGHT INSPECTION. THE ENGINEER SHALL DEFINE CORRECTIVE ACTIONS REQUIRED BEFORE RELEASING THE CONTRACTOR AND COMPLETE ACCEPTANCE OF THE SYSTEM. THIS NOTATION APPLIES TO INSPECTION AND TESTING DURING CONSTRUCTION AND THE CONTRACTUAL ACCEPTANCE TESTS OF ALL INSTALLATIONS.

40. SUBMIT COMPLETE OPERATION AND MAINTENANCE (O&M) MANUALS OF ALL EQUIPMENT AND DEVICES IN ELECTRONIC PDF FORMAT AND HARDCOPY BOUND IN THREE-RING NOTEBOOKS. THE MANUALS SHALL CONTAIN THE FOLLOWING AS A MINIMUM:

    - AS-BUILT WIRING SCHEMATICS INCLUDING PARTS LIST AND DETAILED WIRING DIAGRAMS
    - EQUIPMENT SHOP DRAWING SUBMITTALS
    - MANUFACTURER'S EQUIPMENT INSTALLATION INSTRUCTIONS
    - MANUFACTURER'S START-UP AND OPERATION INSTRUCTIONS
    - MANUFACTURER'S PREVENTATIVE MAINTENANCE INSTRUCTIONS AND SCHEDULES
    - MANUFACTURER'S TROUBLESHOOTING INSTRUCTIONS
    - MANUFACTURER'S SAFETY INSTRUCTIONS
    - WARRANTIES
    - REPLACEMENT PARTS LIST (MANUFACTURER AND MODEL NUMBERS)
    - TRAINING DOCUMENTATION

SHEET 8 OF 174

GENERAL CONSTRUCTION PHASING

1) RUNWAY 02-20 WILL BE SHUT DOWN FOR 70 CONSECUTIVE CALENDAR DAYS TO COMPLETE ALL WORK WITHIN THE RUNWAY SAFETY AREA.
2) THE CONTRACTOR SHALL PROVIDE ENOUGH RESOURCES TO COMPLETE ALL WORK WITHIN THE RUNWAY SAFETY AREA DURING THE 70-DAY RUNWAY SHUT DOWN
3) WORK OUTSIDE RUNWAY SAFETY AREAS MAY OCCUR WITH THE RUNWAY OPEN AND WITH CLOSE COORDINATION AIRPORT OPERATIONS TO ENSURE SAFE PASSAGE OF AIRCRAFT.
4) A SAMPLE WORK FLOW IS PROVIDED ON THIS DRAWING.
5) WORK IN ALL PHASES SHALL BE PERFORMED CONCURRENTLY.

GENERAL CONSTRUCTION PHASING AREAS

PHASE 1 - WORK WITHIN RUNWAY 02 RSA, SOUTH - DURATION 70 DAYS
1) AREA 1A - RUNWAY 02 RSA AND EXTENSION
2) AREA 1B - RUNWAY STA 256+00 TO 251+00, TAXIWAY B SOUTH
3) AREA 1C - RUNWAY STA 251+00 TO 240+00, TAXIWAY J
4) AREA 1D - RUNWAY STA 240+00 TO 229+50, TAXIWAY E TO RUNWAY 02 RSA LIMIT
5) AREA 1E - RUNWAY STA 213+00 TO 229+50, TAXIWAY C EAST FROM RUNWAY 20 TO RSA LIMIT, TAXIWAY C WEST FROM RUNWAY 20 TO RSA LIMIT

PHASE 2 - WORK WITHIN RUNWAY 20 RSA, NORTH - DURATION 70 DAYS
1) AREA 2X - RUNWAY 20 RSA AND EXTENSION
2) AREA 2Y - RUNWAY 20 STA 200+00 TO 204+50, TAXIWAY A FROM RUNWAY 20 TO TAXIWAY F, TAXIWAY D FROM RUNWAY 20 TO RSA LIMIT
3) AREA 2Z - RUNWAY STA 204+50 TO STA 213+00, TAXIWAY F EAST FROM RUNWAY 20 TO TAXIWAY A, TAXIWAY F WEST TO RSA LIMIT

PHASE 3 - WORK OUTSIDE THE RUNWAY 02-20 RSA - DURATION 21 DAYS
1) AREA 3L - TAXIWAY C WEST AND TAXIWAY D OUTSIDE OF RSA LIMIT
2) AREA 3M - TAXIWAY C EAST OUTSIDE OF RSA LIMIT TO TAXIWAY B
3) AREA 3N - TAXIWAY B FROM TAXIWAY C TO TAXIWAY E
4) AREA 3O - TAXIWAY B FROM TAXIWAY E TO TAXIWAY J

CLOSURES

PHASE 1 - RUNWAY 02-20, TAXIWAY A FROM RUNWAY 20 TO TAXIWAY G AND H TO C, TAXIWAYS B, C, D, E, F AND J
PHASE 2 - RUNWAY 02-20, TAXIWAY A FROM RUNWAY 20 TO TAXIWAY G AND H TO C, TAXIWAYS B, C, D, E, F AND J
PHASE 3 - TAXIWAY B FROM C TO J, TAXIWAYS C, D, AND E

GENERAL SEQUENCE OF WORK

- INSTALL EROSION CONTROL MEASURES
- STRIP TOPSOIL
- EXCAVATE FOR PAVEMENT BOX
- MILL PAVEMENT FOR OVERLAY
- EXCAVATE FOR DRAINAGE
- INSTALL DRAINAGE
- INSTALL PAVEMENT BOX
- INSTALL LIGHTS AND SIGNS
- PAVE LEVELING COURSE
- PAVE RUNWAYS AND TAXIWAYS
- REGRADE SAFETY AREAS
- TOPSOIL AND SEED
- PAVEMENT MARKINGS

- PAVE SERVICE ROAD
- PLACE LOAM AND SEED
- INSTALL PAVEMENT MARKINGS

WORK TO BE ACCOMPLISHED - AREA B
- INSTALL EROSION CONTROL MEASURES
- STRIP TOPSOIL
- MILL RUNWAY 02 PAVEMENT TO STATION 251+00
- REMOVE TAXIWAY B PAVEMENT FROM RUNWAY 02 TO PROJECT LIMITS OF WORK
- REMOVE DRAINAGE PIPES AND STRUCTURES
- REMOVE ELECTRIC CANS CONDUIT AND SIGNS
- REGRADE SAFETY AREA
- EXCAVATE TAXIWAY B PAVEMENT BOX
- INSTALL DRAINAGE
- ADJUST SEWER STRUCTURES TO GRADE
- INSTALL RUNWAY TH AND EDGE LIGHTING
- INSTALL TAXIWAY EDGE LIGHTING
- INSTALL SIGNS
- PLACE SELECT MATERIALS
- PAVE RUNWAY 02
- PAVE TAXIWAY B
- PLACE LOAM AND SEED
- INSTALL PAVEMENT MARKINGS

WORK TO BE ACCOMPLISHED - AREA C
- INSTALL EROSION CONTROL MEASURES
- STRIP TOPSOIL
- MILL RUNWAY 02 PAVEMENT STATION 251+00 TO STATION 240+00
- MILL TAXIWAY J PAVEMENT FROM RUNWAY 02 TO TAXIWAY B
- REMOVE DRAINAGE PIPES AND STRUCTURES
- REMOVE ELECTRIC CANS CONDUIT AND SIGNS
- REGRADE SAFETY AREA
- EXCAVATE TAXIWAY E AND SERVICE ROAD PAVEMENT BOXES
- INSTALL DRAINAGE
- ADJUST SEWER STRUCTURES TO GRADE
- INSTALL RUNWAY AND TAXIWAY EDGE LIGHTING
- INSTALL SIGNS
- REPLACE PAPI
- PLACE SELECT MATERIALS
- PAVE RUNWAY 02
- PAVE TAXIWAY J AND SERVICE ROAD
- PLACE LOAM AND SEED
- INSTALL PAVEMENT MARKINGS

HTA 4/17/2025 7:56:32 PM - H:\1_PROJECTS\Tweed\22_063201_00-Tweed-Runway-Extension\2-CADD-Permit\0-Contract\G1.11 - CONSTRUCTION SAFETY AND PHASING PLAN 2.dwg

PHASE 2 NOTES

CONSTRUCTION PHASING AREAS
PHASE 2 - WORK WITHIN RUNWAY 20 RSA, NORTH - DURATION 70 DAYS
- AREA 2X - RUNWAY 20 RSA AND EXTENSION
- AREA 2Y - RUNWAY 20 STA 200+00 TO 204+50, TAXIWAY A FROM RUNWAY 20 TO TAXIWAY F, TAXIWAY D FROM RUNWAY 20 TO RSA LIMIT
- AREA 2Z - RUNWAY STA 204+50 TO STA 213+00, TAXIWAY F EAST FROM RUNWAY 20 TO TAXIWAY A, TAXIWAY F WEST TO RSA LIMIT

DEPENDENCIES
- WORK AREAS X, Y AND Z SHALL BE COMPLETED CONCURRENTLY.
- PHASES 1, 2 AND 3 SHALL BE COMPLETED CONCURRENTLY

CLOSURES
- RUNWAY 02-20
- TAXIWAY A FROM RUNWAY 20 TO TAXIWAY G
- TAXIWAY D FROM RUNWAY 20 TO THE WEST RAMP
- TAXIWAY F
- TAXIWAY C FROM THE WET RAMP TO TAXIWAY A
- TAXIWAY A FROM TAXIWAY H TO TAXIWAY C

WORK TO BE ACCOMPLISHED - AREA X
- INSTALL EROSION CONTROL MEASURES
- STRIP TOPSOIL
- REMOVE SERVICE ROAD
- REGRADE SAFETY AREA
- EXCAVATE PAVEMENT BOX
- INSTALL UNDERDRAIN
- ADJUST SEWER AND DRAINAGE STRUCTURES TO GRADE
- INSTALL RUNWAY END AND EDGE LIGHTING
- PLACE SELECT MATERIALS
- PAVE RUNWAY EXTENSION
- PAVE SERVICE ROAD
- PLACE LOAM AND SEED
- INSTALL PAVEMENT MARKINGS

WORK TO BE ACCOMPLISHED - AREA Y
- INSTALL EROSION CONTROL MEASURES
- STRIP TOPSOIL
- REMOVE RUNWAY 20 PAVEMENT TO STATION 204+50
- REMOVE TAXIWAY A PAVEMENT FROM RUNWAY 20 TO TAXIWAY F
- REMOVE TAXIWAY D PAVEMENT TO LIMITS OF WORK
- REMOVE DRAINAGE PIPES AND STRUCTURES
- REMOVE ELECTRIC CANS CONDUIT AND SIGNS
- REGRADE SAFETY AREA
- EXCAVATE PAVEMENT BOXES
- INSTALL DRAINAGE
- INSTALL RUNWAY TH AND EDGE LIGHTING
- INSTALL TAXIWAY EDGE LIGHTING
- INSTALL SIGNS
- PLACE SELECT MATERIALS
- PAVE RUNWAY 20
- PAVE TAXIWAY A AND D
- PLACE LOAM AND SEED
- INSTALL PAVEMENT MARKINGS

WORK TO BE ACCOMPLISHED - AREA Z
- INSTALL EROSION CONTROL MEASURES
- STRIP TOPSOIL
- REMOVE RUNWAY 20 PAVEMENT FROM STATION 204+50 TO STATION 213+00
- REMOVE TAXIWAY F PAVEMENT FROM TAXIWAY D TO 20 TO TAXIWAY A
- REMOVE TAXIWAY A PAVEMENT TO LIMITS OF WORK
- REMOVE DRAINAGE PIPES AND STRUCTURES
- REMOVE ELECTRIC CANS CONDUIT AND SIGNS
- REGRADE SAFETY AREA
- EXCAVATE PAVEMENT BOXES
- INSTALL DRAINAGE
- INSTALL RUNWAY AND TAXIWAY EDGE LIGHTING
- INSTALL SIGNS
- VERTICALLY ADJUST PAPI
- PLACE SELECT MATERIALS
- PAVE RUNWAY 20
- PAVE TAXIWAY F AND A
- PLACE LOAM AND SEED
- INSTALL PAVEMENT MARKINGS

CONSTRUCTION PHASING AREAS

PHASE 3 - WORK OUTSIDE THE RUNWAY 02-20 RSA - DURATION 21 DAYS
- AREA 3L - TAXIWAY C WEST AND TAXIWAY D OUTSIDE OF RSA LIMIT
- AREA 3M - TAXIWAY C EAST OUTSIDE OF RSA LIMIT TO TAXIWAY B
- AREA 3N - TAXIWAY B FROM TAXIWAY C TO TAXIWAY E
- AREA 3O - TAXIWAY B FROM TAXIWAY E TO TAXIWAY J

DEPENDENCIES
- WORK AREAS X, Y AND Z SHALL BE COMPLETED CONCURRENTLY.
- PHASES 1, 2 AND 3 SHALL BE COMPLETED CONCURRENTLY

CLOSURES
- TAXIWAY D FROM RUNWAY 20 TO TAXIWAY C
- TAXIWAY C FROM RUNWAY 20 TO THE WEST RAMP
- TAXIWAY C FROM TAXIWAY A TO TAXIWAY B
- TAXIWAY B FROM TAXIWAY C TO TAXIWAY J
- TAXIWAY E

WORK TO BE ACCOMPLISHED - AREA M
- INSTALL EROSION CONTROL MEASURES
- STRIP TOPSOIL
- REMOVE TAXIWAY C PAVEMENT FROM EASTERN RSA TO TAXIWAY B
- REGRADE SAFETY AREA
- EXCAVATE PAVEMENT BOXES
- INSTALL TAXIWAY EDGE LIGHTING
- INSTALL SIGNS
- INSTALL VAULT EQUIPMENT
- INSTALL ELECTRICAL HOME RUNS
- PLACE SELECT MATERIALS
- PAVE TAXIWAY C
- PLACE LOAM AND SEED
- INSTALL PAVEMENT MARKINGS

WORK TO BE ACCOMPLISHED - AREA N
- INSTALL EROSION CONTROL MEASURES
- STRIP TOPSOIL
- REMOVE TAXIWAY B PAVEMENT FROM TAXIWAY C TO TAXIWAY B WORK LIMITS
- REMOVE ABANDONED PAVEMENT
- REMOVE DRAINAGE PIPES AND STRUCTURES
- REMOVE ELECTRIC CANS CONDUIT AND SIGNS
- REGRADE SAFETY AREA
- EXCAVATE PAVEMENT BOX
- INSTALL TAXIWAY EDGE LIGHTING
- INSTALL SIGNS
- PLACE SELECT MATERIALS
- PAVE TAXIWAY C
- PLACE LOAM AND SEED
- INSTALL PAVEMENT MARKINGS

WORK TO BE ACCOMPLISHED - AREA O
- REMOVE EXISTING TAXIWAY EDGE LIGHTS
- INSTALL NEW TAXIWAY EDGE LIGHTS

AIP: 3-09-0013-0XX-2025

DRAWING NO.

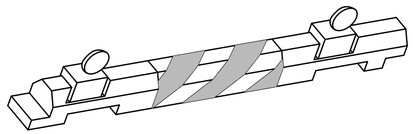
G1.15

SHEET 15 OF 174



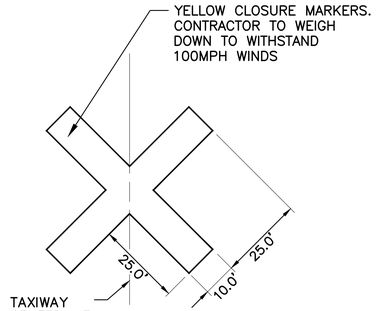
1. EACH BARRICADE IS MARKED WITH DIAGONAL, ALTERNATING ORANGE AND WHITE REFLECTIVE GRADE TAPE 6" WIDE. PROVIDE TWO SOLAR RED FLASHING LIGHTS FOR EACH BARRICADE. LIGHT SPACING SHALL NOT EXCEED 10' SPACING FROM LIGHT TO LIGHT.
2. ALL BARRICADES SHALL BE INTERLOCKED WITH NO GAPS.
3. BARRICADES CAN BE FILLED WITH WATER OR SAND.
4. DESIGNED TO THE MOST RECENT FAA AC 150/5340-1 & 150/5370-2 SPECIFICATIONS AND PERFORMANCE STANDARDS. REFER TO AC 150/5345-55A FOR BARRICADE REQUIREMENTS.
5. MADE OF DURABLE POLYETHYLENE PLASTIC.
6. DIMENSIONS: 6"(H) x 6"(W) x 8'(L).
7. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROVIDING SETUP, MAINTENANCE AND OPERATION OF BARRICADES, INCLUDING REPLACING BATTERIES AND LIGHT BULBS IF NEEDED. ALL BARRICADES SHALL BE REMOVED FROM THE AIRPORT AT THE END OF THE PROJECT.
8. NO SEPARATE PAYMENT SHALL BE MADE FOR PROVIDING, MAINTAINING AND SET UP OF BARRICADES, WORK AREA SIGNS, OR OTHER SAFETY EQUIPMENT AS REQUIRED BY AIRPORT OPERATIONS AND THE ENGINEER. RATHER THEY WILL BE CONSIDERED INCIDENTAL TO THE CSPP COMPLIANCE PAY ITEM.

LOW-PROFILE BARRICADE
NOT TO SCALE

DO NOT ENTER

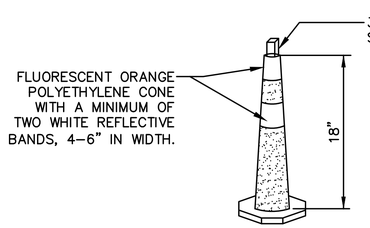
WORK AREA SIGN NOTES:
1. PLACE TEMPORARY 'DO NOT ENTER' SIGNS AT THE PERIMETER OF THE PROJECT LIMITS. LOCATION TO BE AT THE DISCRETION OF AIRPORT OPERATIONS AND THE ENGINEER.
2. SIGNS MUST BE SECURED AND WEIGHTED DOWN AS APPROVED BY THE ENGINEER AND AIRPORT OPERATIONS.

WORK AREA SIGNS
NOT TO SCALE



PROVIDED BY CONTRACTOR AND REMAIN CONTRACTOR'S PROPERTY AT END OF PROJECT

TAXIWAY CLOSURE MARKER
NOT TO SCALE



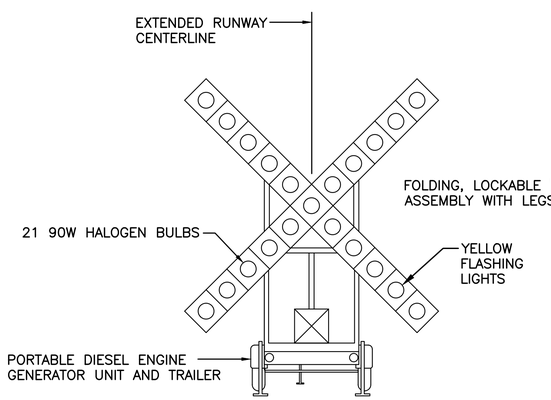
MARKER CONE NOTES:
1. MARKER CONES SHALL BE SPACED AT 25' ON CENTER TO PROTECT THE RUNWAY SAFETY AREA AND SHALL BE PLACED 150' FROM THE RUNWAY CENTERLINE.
2. CONTRACTOR SHALL MAKE FREQUENT INSPECTION OF THE MARKER CONES AND SHALL RELOCATE ANY CONES THAT ARE MISALIGNED.
3. TRAFFIC CONES SHALL BE ADEQUATELY SECURED TO WITHSTAND HIGH WINDS AND/OR JET BLAST USING GRADE STAKES AS SHOWN.

RSA DELINEATION MARKER
NOT TO SCALE

GENERAL PHASING NOTES:

1. SEE THE SPECIFICATIONS FOR REQUIREMENTS SET FORTH IN THE CONSTRUCTION SAFETY AND PHASING PLAN (CSPP) AND THE REQUIREMENT FOR THE CONTRACTOR TO SUBMIT A SAFETY PLAN COMPLIANCE DOCUMENT (SPCD) PRIOR TO CONSTRUCTION.
2. A SAFETY MEETING SHALL BE HELD BEFORE THE START OF EACH PHASE TO DISCUSS BARRICADE PLACEMENT, SAFETY AREAS, STOCKPILES, SAFETY AREAS, RUNWAY CLOSURE MARKER PLACEMENT, MARKING ERADICATION, OBSCURING SIGNS AND LIGHTS AND OTHER SAFETY ISSUES DIRECTED BY THE ENGINEER AND AIRPORT.
3. THE CONTRACTOR SHALL CALL AIRPORT OPERATIONS AT THE BEGINNING OF EACH DAY TO INFORM THEM OF THAT DAYS SCHEDULE AND CALL THEM A HOUR BEFORE LEAVING FOR THE DAY SO THEY CAN INSPECT THE WORK AREA. THE CONTRACTOR SHALL NOT LEAVE UNTIL OPERATIONS IS SATISFIED.
4. CONTRACTOR SHALL PROVIDE SUBMITTALS TO ENGINEER FOR APPROVAL OF STAGING AND STOCKPILE AREAS, DURATION, MATERIALS, HEIGHTS, ETC.
5. A GATE GUARD SHALL BE REQUIRED AT ACCESS GATE 17 & 23 DURING WORKING HOURS OF ALL PHASES. GATE SHALL REMAIN OPEN WHEN THE GATE IS BEING GUARDED. GATE SHALL BE LOCKED WHEN GATE GUARD IS NOT PRESENT.
6. ALL PHASES WILL REQUIRE ONE ESCORT AT A MINIMUM TO MOVE VEHICLES/EQUIPMENT FROM ONE FLAGGER POINT TO THE NEXT FLAGGER. ONE ESCORT VEHICLE CANNOT ESCORT MORE THAN 5 CONSTRUCTION VEHICLES AT A TIME.
7. ALL SIGNS AND LIGHTS LEADING TO AND WITHIN CLOSED AREAS SHALL BE OBSCURED BY REPLACING PANELS WITH BLANKS FOR SIGNS AND REMOVING BULBS IN EDGE LIGHTS, AT NO ADDITIONAL COST TO THE OWNER. THE CONTRACTOR SHALL PROVIDE A DETAILED DRAWING FOR EACH PHASE ON WHAT THEY PLAN TO OBSCURE.
8. THE CONTRACTOR SHALL BE AVAILABLE TO MOVE AND MAINTAIN BARRICADES AT ANY TIME (24/7) UPON REQUEST OF THE AIRPORT OR ENGINEER.
9. A PORTA-POTTY SHALL BE IN ALL WORK AREAS/PHASES TO LIMIT THE MOVEMENT OF CONTRACTOR VEHICLES.
10. DAYTIME WORK HOURS SHALL BE 6:30 AM TO 6:30 PM AND NIGHTTIME WORK HOURS SHALL 9:00 PM TO 7:00 AM UNLESS OTHERWISE AUTHORIZED BY THE AIRPORT. CONTRACTOR SHALL REQUEST WORKING SUNDAYS AND ANY HOLIDAYS.
11. CONTRACTOR SHALL HAVE ENGINEER'S FIELD OFFICE SET UP PER SPECIFICATIONS AND APPROVED BY THE ENGINEER BEFORE STARTING THE CONTRACT TIME.
12. THE CONTRACTOR SHALL INSPECT ALL SAFETY EQUIPMENT DAILY TO ENSURE THEY ARE POSITIONED AND WORKING PROPERLY.
13. DURING NIGHT WORK ALL LIGHTING EQUIPMENT SHALL BE CONTROLLED TO PREVENT STRAY LIGHT. THE CONTRACTOR SHALL DIRECT ALL LIGHTING AWAY FROM ADJACENT NEIGHBORHOODS AND IN A MANNER THAT DOES NOT INTERFERE WITH THE AIR TRAFFIC CONTROL TOWER AND AIRCRAFT OPERATIONS. THE CONTRACTOR SHALL PREPARE A LIGHTING PLAN TO BE REVIEWED AND APPROVED BY THE ENGINEER. THE ENGINEER SHALL APPROVE THE LOCATION AND OPERATION OF ALL LIGHTING EQUIPMENT.
14. THE CONTRACTOR SHALL HAVE A VACUUM SWEEPER AND/OR FOD RAZOR ON SITE AT ALL TIMES IN ORDER TO CLEAN HAUL ROUTES AND PRIVATE/PUBLIC ROUTES, UPON REQUEST FROM THE OWNER OR ENGINEER.
15. THE CONTRACTOR SHALL ATTEMPT TO AVOID ALL AIRFIELD MARKINGS OUTSIDE THE LIMIT OF WORK IN ORDER TO MINIMIZE THE NEED TO REPAINT THE MARKINGS.

LIGHTED RUNWAY CLOSURE MARKER MUST BE PRESENT & VISIBLE FROM THE AIR AT ALL TIMES DURING RUNWAY CLOSURE.



PORTABLE LIGHTED RUNWAY CLOSURE MARKER
NOT TO SCALE

RUNWAY CLOSURE MARKER NOTES:

1. CROSSES ARE REQUIRED AT ENDS OF CLOSED RUNWAYS. THE CROSSES SHALL BE LOCATED AND PLACED OVER THE RUNWAY NUMERALS OF THE RUNWAY INDICATED TO BE CLOSED UNLESS OTHERWISE SPECIFIED. THE CONTRACTOR SHALL BE ESCORTED BY THE RPR OR AIRPORT OPERATIONS TO PLACE OR ACCESS THE CLOSURE MARKERS.
2. THE CONTRACTOR SHALL SUPPLY THE LIGHTED 'X'. THE CONTRACTOR SHALL BE RESPONSIBLE FOR SETUP, MAINTENANCE AND OPERATION INCLUDING PROVIDING FUEL AND REPLACEMENT LIGHT BULBS AS NECESSARY FOR THE ENTIRE TIME THE 'X' IS IN USE, INCLUDING HOURS WHEN THE CONTRACTOR IS NOT ON SITE.
3. RUNWAY CLOSURE MARKERS SHALL MEET THE REQUIREMENTS OF FAA AC 150/5345-55 (LATEST REVISION).

NOTES

1. THIS SURVEY HAS BEEN PREPARED PURSUANT TO THE REGULATIONS OF CONNECTICUT STATE AGENCIES SECTIONS 20–300b–1 THROUGH 20–300b–20 AND THE "STANDARDS FOR SURVEYS AND MAPS IN THE STATE OF CONNECTICUT" AS ADOPTED BY THE CONNECTICUT ASSOCIATION OF LAND SURVEYORS, INC. ON SEPTEMBER 26, 1996.
   a. THIS SURVEY IS A PROPERTY SURVEY CONFORMING TO A HORIZONTAL ACCURACY OF A–2 AND A TOPOGRAPHIC SURVEY CONFORMING TO A T–2 ACCURACY. BOUNDARY INFORMATION PROVIDED BY OTHERS, APPROXIMATE LOCATION SHOWN. THE PURPOSE OF THIS SURVEY IS TO DEPICT SITE FEATURES FOR FUTURE SITE DEVELOPMENT.
2. THIS SURVEY IS BASED UPON EXISTING PHYSICAL CONDITIONS FOUND AT THE SUBJECT SITE, DEED INFORMATION AND THE FOLLOWING REFERENCES:
   A. MAP TITLED "PARTIAL BOUNDARY AND TOPOGRAPHIC SURVEY – TWEED AIRPORT – EAST HAVEN/NEW HAVEN – NEW HAVEN COUNTY, CONNECTICUT", SHEETS VB201 THROUGH VB208, SCALE: 1 INCH = 40 FEET, DATED: 5 MAY 2023, AS PREPARED BY: LANGAN CT, INC.
   B. MAP TITLED "LOTS 500–507 THOMPSON AVENUE GARDENS – SECTION 2 – BURGESS STREET AND THOMPSON AVENUE – EAST HAVEN, CONNECTICUT", SCALE: 1 INCH = 20 FEET, DATED: 31 JULY 1995, LAST REVISED: 28 DECEMBER 1995, AS PREPARED BY: CRISCUOLO SHEPARD ASSOCIATES, P.C. – BRANFORD, CONNECTICUT.
   C. MAP TITLED "EXHIBIT A – PROPERTY MAP – TWEED NEW HAVEN REGIONAL AIRPORT – AIRPORT PROPERTY LAYOUT", SCALE: VARIES, DATED: NOVEMBER 1989, LAST REVISED: 21 APRIL 2021, AS PREPARED BY: GREINER SURVEYING & MAPPING – WALLINGFORD, CONNECTICUT.
   D. MAP TITLED "TWEED NEW HAVEN AIRPORT AUTHORITY – CONSTRUCT RUNWAY 20 SAFETY AREA IMPROVEMENTS – AIR PROJECT NO. 3–09–0013–33–2008", SCALE: VARIES, DATED: MAY 2008, LAST REVISED: JULY 2010, AS PREPARED BY: HOYLE, TANNER & ASSOCIATES, INC. – MANCHESTER, NEW HAMPSHIRE.
   E. MAP TITLED "TWEED NEW HAVEN AIRPORT AUTHORITY – CONSTRUCT RUNWAY 2 SAFETY AREA, WETLAND MITIGATION AND TIDE GATE IMPROVEMENTS (BASE BID) – AIR PROJECT NO. 3–09–0013–33", SCALE: VARIES, DATED: AUGUST 2007, LAST REVISED: MARCH 2009, AS PREPARED BY: HOYLE, TANNER & ASSOCIATES, INC. – MANCHESTER, NEW HAMPSHIRE.
   F. MAP TITLED "AIRFIELD ELECTRICAL PLANS – TWEED–NEW HAVEN AIRPORT AUTHORITY – TWEED–NEW HAVEN AIRPORT – NEW HAVEN, CONNECTICUT", SCALE: VARIES, DATED: OCTOBER 2004, AS PREPARED BY: EDWARDS AND KELCEY – PROVIDENCE, RHODE ISLAND.
   G. MAP TITLED "TWEED–NEW HAVEN AIRPORT – RECONSTRUCT A PORTION OF R/W 32 – DRAINAGE PLAN", DRAWING NO. C4.2, SCALE: 1 INCH = 100 FEET, DATED: MARCH 2002, LAST REVISED: 15 JULY 2003, AS PREPARED BY: HOYLE, TANNER & ASSOCIATES, INC. – MANCHESTER, NEW HAMPSHIRE.
3. THE MERIDIAN OF THIS SURVEY IS REFERENCED TO CONNECTICUT STATE PLANE COORDINATE SYSTEM NAD 83 (EPOCH 2011). POSITION WAS DETERMINED BY GLOBAL NAVIGATION SATELLITE SYSTEMS (GNSS) AS PROVIDED BY HXGN SMARTNET CONTINUOUSLY OPERATED REFERENCE STATIONS (CORS).
4. ELEVATIONS SHOWN ARE REFERENCED TO NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) (GEOID 18) AS DETERMINED BY GNSS
5. PLANIMETRIC AND TOPOGRAPHIC INFORMATION SHOWN HEREON HAS BEEN OBTAINED FROM GROUND SURVEYS BY LANGAN CT, INC. FIELD WORK COMPLETED DURING THE MONTHS OF APRIL 2023, AND UPDATED IN DECEMBER THROUGH OCTOBER 2024.
6. AS PER THE NATIONAL FLOOD INSURANCE PROGRAM FIRM MAP ENTITLED "NEW HAVEN COUNTY, CONNECTICUT PANEL 444 OF 635, MAP NUMBER 09009C0444J, EFFECTIVE DATE JULY 8, 2013" THE PROJECT AREA IS PARTIALLY IN ZONE X (UNSHADED), PARTIALLY IN ZONE AE (EL11), PARTIALLY IN ZONE AE (EL12), AND PARTIALLY WITHIN THE LIMITS OF MODERATE WAVE ACTION.
7. UNLESS SPECIFICALLY NOTED HEREON, STORM AND SANITARY SEWER INFORMATION (INCLUDING PIPE INVERT, PIPE MATERIAL, AND PIPE SIZE) WAS OBSERVED AND MEASURED AT FIELD LOCATED STRUCTURES (MANHOLES/CATCH BASINS, ETC.). CONDITIONS CAN VARY FROM THOSE ENCOUNTERED AT THE TIMES WHEN AND LOCATIONS WHERE DATA IS OBTAINED. DESPITE MEETING THE REQUIRED STANDARD OF CARE, THE SURVEYOR CANNOT, AND DOES NOT WARRANT THAT PIPE MATERIAL AND/OR PIPE SIZE THROUGHOUT THE PIPE RUN ARE THE SAME AS THOSE OBSERVED AT EACH STRUCTURE, OR THAT THE PIPE RUN IS STRAIGHT BETWEEN THE LOCATED STRUCTURES.
8. ADDITIONAL UTILITY (WATER, GAS, ELECTRIC ETC.) DATA MAY BE SHOWN FROM FIELD LOCATED SURFACE MARKINGS (BY OTHERS), EXISTING STRUCTURES, AND/OR FROM EXISTING DRAWINGS.
9. UNLESS SPECIFICALLY NOTED HEREON, THE SURVEYOR HAS NOT EXCAVATED TO PHYSICALLY LOCATE THE UNDERGROUND UTILITIES. THE SURVEYOR MAKES NO GUARANTEES THAT THE SHOWN UNDERGROUND UTILITIES ARE EITHER IN SERVICE, ABANDONED OR SUITABLE FOR USE, NOR ARE IN THE EXACT LOCATION OR CONFIGURATION INDICATED HEREON.
10. ALL BUILDINGS AND STRUCTURES WERE LOCATED AND MEASURED AT GROUND LEVEL. THE SURVEYOR MAKES NO DETERMINATIONS OR GUARANTEES AS TO THE ABSENCE, EXISTENCE OR LOCATION OF UNDERGROUND STRUCTURES, FOUNDATIONS, FOOTINGS, PROJECTIONS, WALLS, TANKS, SEPTIC SYSTEMS, ETC. NO TEST PITS, EXCAVATIONS OR GROUND PENETRATING RADAR WERE PERFORMED AS PART OF THIS SURVEY.
11. PRIOR TO ANY DESIGN OR CONSTRUCTION, THE PROPER UTILITY AGENCIES MUST BE CONTACTED FOR VERIFICATION OF UTILITY TYPE AND FOR FIELD LOCATIONS.
12. THIS SURVEY IS NOT VALID WITHOUT THE EMBOSSED OR INKED SEAL OF THE PROFESSIONAL.

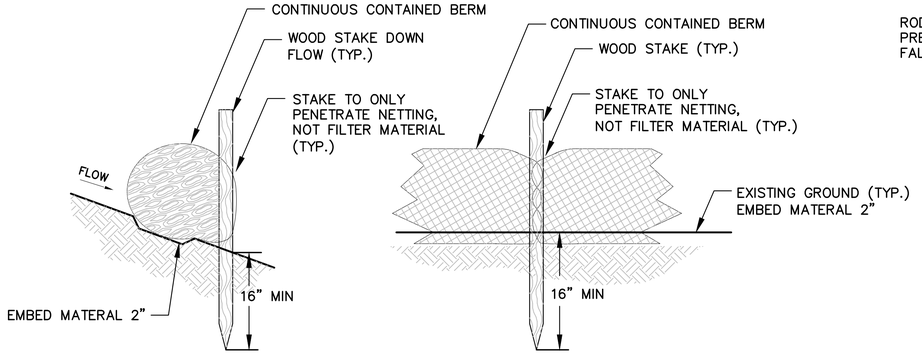
CONTINUOUS CONTAINED BERM INLET PRTECTION AT CATCH BASIN

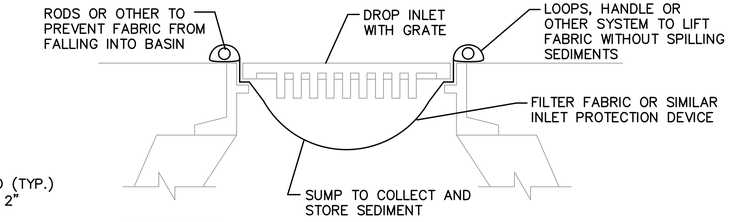
NOT TO SCALE



NOTE:
CONTINUOUS CONTAINED BERMS CONSIST OF A SYNTHETIC TUBULAR NETTING FILLED WITH EROSION CONTROL MIX OR OTHER FILTER MATERIAL AND SHALL BE INSTALLED PER MANUFACTURERS INSTRUCTION.

CONTINUOUS CONTAINED BERM SEDIMENT BARRIER DETAIL

NOT TO SCALE

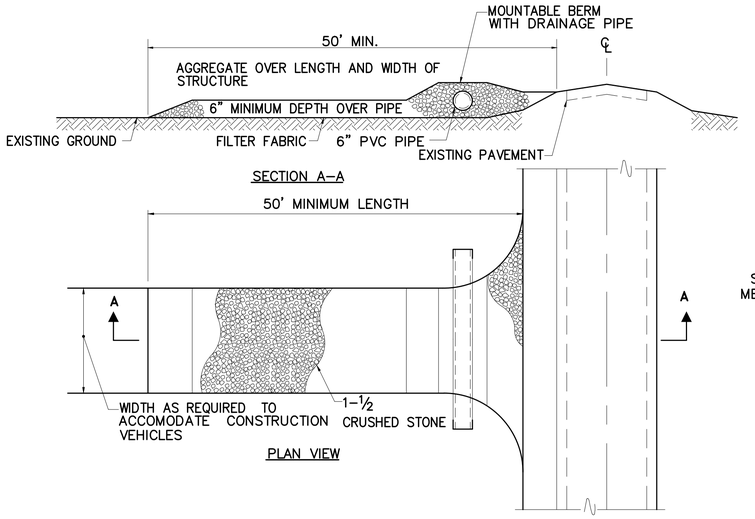


MAINTENANCE:
CONTRACTOR TO CLEAN AFTER EVERY STORM. IF THE BARRIER BECOMES CLOGGED WITH SEDIMENT SO THAT IT NO LONGER ADEQUATELY PASSES FILTERED WATER, THE SEDIMENT SHALL BE REMOVED AND THE BARRIER SHALL BE REPLACED. REMOVED SEDIMENT SHALL BE DEPOSITED IN A SUITABLE AREA AND IN SUCH A MANNER THAT IT WILL NOT ERODE.

THE DEVICE SHALL BE USED FOR IN PAVEMENT CATCH BASINS, AND TRENCH DRAINS AND SHALL BE REMOVED WHEN THE DRAINAGE AREA HAS BEEN ADEQUATELY STABILIZED.

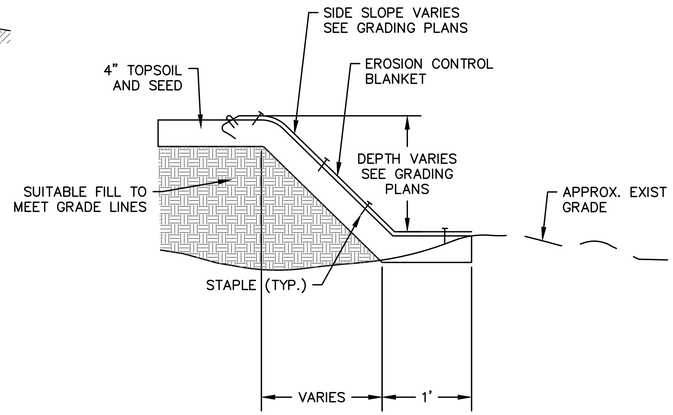
FILTER FABRIC INLET PROTECTION AT CATCH BASIN/TRENCH DRAIN

NOT TO SCALE



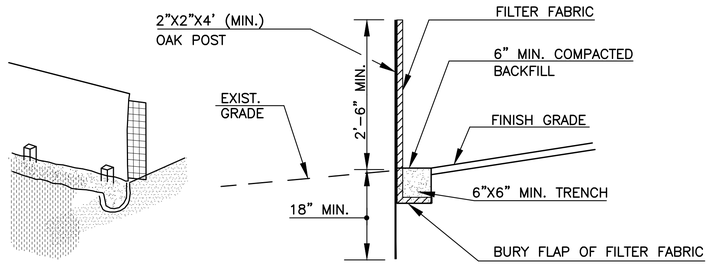
STABILIZED CONSTRUCTION ENTRANCE

NOT TO SCALE



VEGETATED SIDE SLOPE DETAIL

NOT TO SCALE



NOTE:
1. SPACING OF WOOD FENCE POST NOT TO EXCEED 6'–0".
2. SILT FENCE SHALL BE INSTALLED BEFORE ANY EARTH REMOVAL OR EXCAVATION TAKES PLACE.
3. SILT FENCE SHALL BE INSPECTED WEEKLY OR AFTER RAIN. ANY SEDIMENT ACCUMULATED HIGHER THAN 1 FOOT ABOVE EXISTING GRADE SHALL BE REMOVED, ANY DAMAGED SECTIONS SHALL BE REPAIRED OR REPLACED.

SILT FENCE SEDIMENT BARRIER DETAIL

NOT TO SCALE

NOTES:

1. PRIOR TO PLACING EROSION CONTROL BLANKET, PREPARE THE SOIL BY RAKING AREA FREE OF CLODS AND LARGE STONES.
2. SEED, MULCH AND FERTILIZER SHALL BE DISTRIBUTED AS SPECIFIED OVER THE PREPARED SOIL PRIOR TO PLACING THE EROSION CONTROL BLANKET.
3. ALL SEAMS SHALL BE OVERLAPPED A MINIMUM OF 3" AND SECURE WITH STAPLES SPACED 18"–24" ON CENTER.
4. TO SECURE BLANKET TO GROUND, STAPLE PER MANUFACTURERS RECOMMENDATIONS.
5. OVERLAP EROSION CONTROL BLANKET IN DIRECTION OF FLOW ONLY.
6. WHERE SWALE SIDE SLOPES ARE FLATTER THAN 6:1 OR WHERE GRADE BREAKS ARE SUBSTANTIALLY HIGHER THAN THE SWALE BOTTOM, EROSION CONTROL BLANKET MAY BE TUCKED INTO THE SLOPE APPROXIMATELY 1' ABOVE SWALE BOTTOM. OTHERWISE, WELL–DEFINED CHANNELS SHALL BE PROTECTED TO THE TOP OF SLOPE AS SHOWN.

EROSION CONTROL MIX BERMS SEDIMENT BARRIER

EROSION CONTROL MIX CAN BE MANUFACTURED ON OR OFF THE PROJECT SITE. IT MUST CONSIST PRIMARILY OF ORGANIC MATERIAL, SEPARATED AT THE POINT OF GENERATION, AND MAY INCLUDE: SHREDDED BARK, STUMP GRINDINGS, COMPOSTED BARK, OR ACCEPTABLE MANUFACTURED PRODUCTS. WOOD AND BARK CHIPS, GROUND CONSTRUCTION DEBRIS OR REPROCESSED WOOD PRODUCTS WILL NOT BE ACCEPTABLE AS THE ORGANIC COMPONENT OF THE MIX.

COMPOSITION
EROSION CONTROL MIX SHALL CONTAIN A WELL–GRADED MIXTURE OF PARTICLE SIZES AND MAY CONTAIN ROCKS LESS THAN 4" IN DIAMETER. EROSION CONTROL MIX MUST BE FREE OF REFUSE, PHYSICAL CONTAMINANTS, AND MATERIAL TOXIC TO PLANT GROWTH. THE MIX COMPOSITION SHALL MEET THE FOLLOWING STANDARDS (SUBMITTAL REQUIRED):

- THE ORGANIC MATTER CONTENT SHALL BE BETWEEN 80 AND 100%, DRY WEIGHT BASIS.
- PARTICLE SIZE BY WEIGHT SHALL BE 100% PASSING A 6" SCREEN AND A MINIMUM OF 70%, MAXIMUM OF 85%, PASSING A 0.75" SCREEN.
- THE ORGANIC PORTION NEEDS TO BE FIBROUS AND ELONGATED.
- LARGE PORTIONS OF SILTS, CLAYS OR FINE SANDS ARE NOT ACCEPTABLE IN THE MIX.
- SOLUBLE SALTS CONTENT SHALL BE < 4.0 MMHOS/CM.
- THE PH SHOULD FALL BETWEEN 5.0 AND 8.0.

INSTALLATION
THE BARRIER MUST BE PLACED ALONG A RELATIVELY LEVEL CONTOUR. IT MAY BE NECESSARY TO CUT TALL GRASSES OR WOODY VEGETATION TO AVOID CREATING VOIDS AND BRIDGES THAT WOULD ENABLE FINES TO WASH UNDER THE BARRIER THROUGH THE GRASS BLADES OR PLANT STEMS.

ON SLOPES LESS THAN 5% OR AT THE BOTTOM OF STEEPER SLOPES (2:1) UP TO 20 FEET LONG, THE BARRIER MUST BE A MINIMUM OF 12" HIGH, AS MEASURED ON THE UPHILL SIDE OF THE BARRIER, AND A MINIMUM OF TWO FEET WIDE. ON LONGER OR STEEPER SLOPES, THE BARRIER SHOULD BE WIDER TO ACCOMMODATE THE ADDITIONAL RUNOFF.

FROZEN GROUND, OUTCROPS OF BEDROCK AND VERY ROOTED FORESTED AREAS ARE LOCATIONS WHERE BERMS OF EROSION CONTROL MIX ARE MOST PRACTICAL AND EFFECTIVE. OTHER BMPS SHOULD BE USED AT LOW POINTS OF CONCENTRATED RUNOFF, BELOW CULVERT OUTLET APRONS, AROUND CATCH BASINS AND CLOSED STORM SYSTEMS, AND AT THE BOTTOM OF STEEP PERIMETER SLOPES THAT ARE MORE THAN 50 FEET FROM TOP TO BOTTOM (I.E., A LARGE UP GRADIENT CONTRIBUTING WATERSHED).

ER2.1

SHEET 48 OF 174

TOPSOIL AND SEEDING

1. TOPSOIL:

   SEE DEMOLITION PLANS FOR AREAS WHERE TOPSOIL MUST BE RETURNED TO ITS ORIGINAL LOCATION. THE REMAINING AREAS MAY USE SUITABLE TOPSOIL STRIPPED FROM THE SITE, FROM THE AIRPORT STOCKPILE OR FROM OFF-SITE AND SHALL MEET THE REQUIREMENTS OF SPECIFICATION SECTION T-905, TOPSOILING.

2. SEEDING:

   SEE DEMOLITION PLANS FOR AREAS WHERE TOPSOIL MUST BE RETURNED TO ITS ORIGINAL LOCATION AND THE NATIVE SEED BANK UTILIZED. THE REMAINING AREAS SHALL USE PERMANENT SEED MIXES AND RATES BETWEEN 5/15 AND 9/30. USE TEMPORARY SEED FOR PERIODS LESS THAN 12 MONTHS. IF USING TEMPORARY SEED MIXES BETWEEN 10/01 AND 5/15, RE-SEED WITH PERMANENT SEED MIX AFTER 5/15.

   THE AREAS IDENTIFIED TO RETURN TOPSOIL AND UTILIZE THE NATIVE SEED BANK SHALL NOT RECEIVE PERMANENT AND TEMPORARY MIXES

3. REGULAR SEED MIX

KIND OF SEED	LBS PER ACRE	% OF MIX
TALL FESCUE (FESCUE ARUNDINACEA)	325	100

   USE A MINIMUM OF OF 3 VARIETIES OF TALL FESCUE. EACH VARIETY SHOULD CONTAIN A MINIMUM OF 70% VIABLE ENDOPHYTES. VARIETIES SHOULD COME FROM THE FOLLOWING LIST: 2ND MILLENNIUM, BONSAI, CAYENNE, COCHISE III, CONSTITUTION, COVENANT, COYOTE II, CROSSFIRE II, DAKOTA, DYNASTY II, ESCALADE, MUSTANG 3, RENDITION, SR 8600, TAOS, TITAN LTD., TITANIUM, TOMBSTONE, OR AS APPROVED BY THE ENGINEER.

4. TEMPORARY SEED:

KIND OF SEED	LBS PER ACRE	SEEDING DEPTH	RECOMMENDED SEEDING DATES	REMARKS
WINTER RYE	112	1-1.5 IN	8/15-10/1	GOOD FOR FALL SEEDING. SELECT A HARDY SPECIES, SUCH AS AROOSTOOK RYE.
OATS	80	1-1.5 IN	4/1-7/1 8/15-9/15	EARLY FALL SEEDING WILL DIE WHEN WINTER WEATHER MOVES IN, BUT MULCH WILL PROVIDE PROTECTION.
ANNUAL RYEGRASS	40	.25 IN	4/1-7/1	GROWS QUICKLY BUT IS OF SHORT DURATION. USE WHERE APPEARANCE IS IMPORTANT. WITH MULCH, SEEDING MAY BE DONE THROUGHOUT GROWING SEASON.
SUDANGRASS	40	.5-1 IN	5/15-8/15	GOOD GROWTH DURING HOT SUMMER PERIODS.
PERENNIAL	40	.25 IN	8/15-9/15	GOOD COVER, LONGER LASTING THAN ANNUAL RYEGRASS. MULCHING WILL ALLOW SEEDING THROUGHOUT GROWING SEASON.

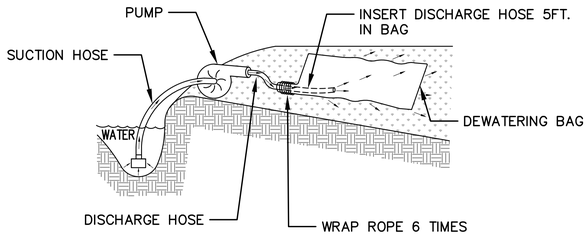
5. LIME AND FERTILIZER:

   SEE DEMOLITION PLANS FOR AREAS WHERE THE TOPSOIL MUST BE RETURNED TO ITS ORIGINAL LOCATION AND THE NATIVE SEED BANK UTILIZED, NO LIME OR FERTILIZER SHALL BE USED IN THESE AREAS. FoR THE REMAINING AREAS APPLY LIME AND FERTILIZER AT THE RATES SPECIFIED IN SECTION T-901, SEEDING.

6. MULCH:

   MULCH AND EROSION CONTROL MATTING SHALL BE AS SPECIFIED IN SECTION C-102 TEMPORARY AIR AND WATER POLLUTION, SOIL EROSION AND SILTATION CONTROL.

STRAW OR HAY (ANCHORED)	70 - 90 LBS	PROTECTED AREAS
STRAW OR HAY (ANCHORED)	185 - 275 LBS	WINDY AREAS
SHREDDED OR CHOPPED	185 - 275 LBS	MODERATE TO HIGH VELOCITY
EROSION CONTROL BLANKET	AS REQUIRED	AREAS AND SLOPES STEEPER THAN 3:1



DEWATERING BAG

NOT TO SCALE

INSTALLATION AND USE:

1. PLACE DEWATERING BAG ON THE GROUND OR ON A TRAILER OVER A RELATIVELY LEVEL, STABILIZED AREA.
2. INSERT DISCHARGE PIPE A MINIMUM OF 5FT. INSIDE DEWATERING BAG AND SECURE WITH A ROPE WRAPPED 6 TIMES AROUND THE SNOUT OVER A 6 INCH WIDTH OF THE BAG.
3. REPLACE DEWATERING BAG WHEN HALF FULL OF SEDIMENT OR WHEN THE SEDIMENT HAS REDUCED THE FLOW RATE OF THE PUMP DISCHARGE TO AN IMPRACTICAL AMOUNT.
4. REMOVE AND DISPOSE OF ACCUMULATED SEDIMENT AWAY FROM WATERWAYS OR ENVIRONMENTALLY SENSITIVE AREAS. SLIT OPEN DEWATERING BAG AND REMOVE ACCUMULATED SEDIMENT. DISPOSE OF BAG AT AN APPROPRIATE RECYCLING OR SOLID WASTE FACILITY.

EROSION CONTROL NOTES

1. ALL EARTHWORK SHALL BE CONFINED TO THE LIMITS OF WORK AS SHOWN ON CONTRACT DRAWINGS.
2. SILT FENCES OR EROSION CONTROL MIX BERMS SHALL BE INSTALLED WHERE SHOWN ON THE PLANS, ON THE DOWNHILL SIDE OF STOCKPILES OF TOPSOIL AND OTHER SOIL MATERIALS AND IN OTHER LOCATIONS AS REQUIRED, TO PREVENT SILT AND SEDIMENTATION FROM ENTERING EXISTING DRAINAGE CHANNELS.
3. ALL TURF AREAS SHALL BE PERMANENTLY STABILIZED WITHIN 15 DAYS OF FINAL GRADING OR TEMPORARILY STABILIZED WITHIN 30 DAYS OF INITIAL DISTURBANCE OF SOIL.
4. DUST CONTROL: ALL VEHICLE TRAFFIC AREAS AND EXPOSED SURFACES SHALL BE MOISTENED PERIODICALLY WITH ADEQUATE WATER TO CONTROL DUST.
5. CONSTRUCTION ROAD: STONE CONSTRUCTION ROAD SHALL BE CONSTRUCTED AFTER ALL SILT FENCING AND OTHER CONTROL MEASURES HAVE BEEN INSTALLED, AND PRIOR TO ANY EXCAVATION ACTIVITIES ON THE SITE.
6. SLOPE STABILITY: ALL SLOPES SHALL BE INSPECTED FREQUENTLY FOR SIGNS OF FAILURE, SLIPPING, AND/OR EROSION. ANY DAMAGE SHALL BE REPAIRED IMMEDIATELY.
7. CONTRACTOR EROSION CONTROL MEASURES ARE NOT LIMITED TO THOSE SHOWN ON THE PLANS. THE CONTRACTOR SHALL PERFORM ANY AND ALL ADDITIONAL MEASURES TO CONTROL EROSION.
8. SEDIMENT CONTROL AROUND CATCH BASINS SHALL BE INSTALLED WHERE INDICATED, AND PER THE DETAIL.
9. CHECK DAMS SHALL BE PLACED AS REQUIRED TO MINIMIZE SEDIMENTATION. ALL CHECK DAMS SHALL BE PERIODICALLY INSPECTED AND MAINTAINED AS DEEMED NECESSARY BY THE ENGINEER.

OVERWINTER CONSTRUCTION AND STABILIZATION

1. THE WINTER CONSTRUCTION PERIOD IS FROM NOV 1 TO APR 15.
2. USE BERMS SEEDED ACCORDING TO TOPSOILING AND SEEDING NOTE 4 FOR SEDIMENT BARRIERS.
3. APPLY TEMPORARY SEED AND MULCH AT TWICE THE NORMAL RATE ACCORDING TO TOPSOILING AND SEEDING NOTES 4 AND 5.
4. MULCH STOCKPILES OF SOIL/SUBSOIL OVER WINTER WITH HAY OR STRAW AT TWICE NORMAL RATE.
5. DO NOT PLACE PERMANENT SEED BETWEEN OCT 16 AND APR 1. PROTECT FINE GRADED AREAS WITH MULCH OR TEMPORARY SEED AND MULCH UNTIL FINAL TREATMENT.
6. CONSTRUCT AND STABILIZE STONE-LINED DITCHES AND CHANNELS BY NOV 15. CONSTRUCT AND STABILIZE GRASS-LINE DITCHES AND CHANNELS BY SEP 1. INSTALL A SOD OR STONE LINER IF DITCHES AND CHANNELS CANNOT BE STABILIZED BY THESE DATES.
7. DISTURBED SOILS WITH SLOPES LESS THAN 15% MUST BE SEEDED AND MULCHED BY SEP 15. IF NOT STABILIZED BY THIS DATE, USE TEMPORARY VEGETATION, SOD, OR MULCH.

HYDRANTS

1. CONTRACTOR MAY USE EXISTING HYDRANT FOR DUST AND MILLING.
2. HYDRANTS ARE LOCATED OUTSIDE AIRPORT SECURED AREA. CONTRACTOR MAY UTILIZE WITH WATER DISTRICT'S PERMISSION. WATER DISTRICT TO INSTALL METER AND PROPER BACKFLOW EQUIPMENT.
3. CONTRACTOR SHALL UTILIZE A WATER TRUCK TO TRANSPORT INTO PROJECT AREA.
4. CONTRACTOR TO PAY FOR FOR WATER USE INCIDENTAL TO THE PROJECT.

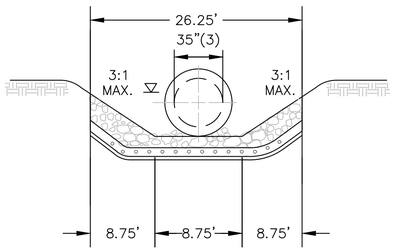
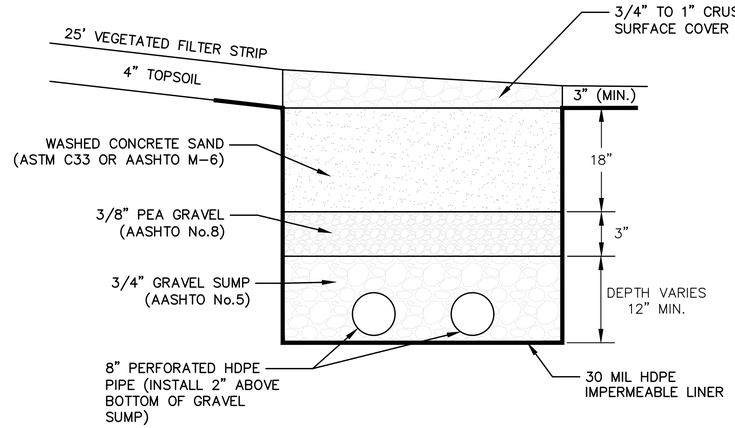
SECTION A–A
CULVERT END AND ENDWALL



SECTION B–B
CULVERT END AND ENDWALL

RIPRAP OUTLET PROTECTION

NOT TO SCALE



SOIL FILTER DIMENSIONS			
SOIL FILTER	LENGTH	WIDTH	PIPE
SF1	944.5'	5'	2x8"
SF2	944.5'	5'	2x8"
SF3	452'	4'	1x8"
SF4	452'	4'	1x8"

RECOMMENDED MAINTENANCE ACTIVITIES

1. INSPECT SAND FILTERS ANNUALLY.
2. REMOVE TRASH AND ORGANIC DEBRIS (LEAVES) IN THE SPRING AND FALL.
3. REMOVE SEDIMENT FROM SAND FILTER WHEN THE SEDIMENT ACCUMULATION EXCEEDS 2 INCHES OR WHEN DRAWDOWN TIME EXCEEDS 48 HOURS AFTER THE END OF A STORM EVENT, INDICATING THAT THE FILTER IS CLOGGED. REPLACE WITH FRESH WASHED CONCRETE SAND THAT CONFORMS TO THE SPECIFICATIONS IN THIS SECTION.
4. PERIODICALLY REMOVE GRASS CLIPPINGS TO PREVENT CLOGGING OF THE SURFACE OF THE SAND FILTER.

SURFACE SAND FILTER WITH UNDERDRAIN AND LINER

GENERAL NOTES:

G–1. GENERAL NOTES SHALL APPLY TO ALL DRAWINGS PREPARED BY HOYLE TANNER, INC. AND THE WORK THEY CONVEY.

G–2. ALL WORK SHALL CONFORM TO ALL FEDERAL, STATE AND LOCAL CODES, REGULATIONS AND STANDARDS, THE MORE STRINGENT SHALL GOVERN.

G–3. THE GENERAL CONTRACTOR SHALL SUPERVISE AND DIRECT THE WORK AND SHALL BE SOLELY RESPONSIBLE FOR ALL CONSTRUCTION MEANS, METHODS AND COORDINATION OF OTHER TRADES.

G–4. THESE DOCUMENTS DO NOT INCLUDE THE NECESSARY COMPONENTS FOR CONSTRUCTION SAFETY. CARE OF ADJACENT PROPERTIES DURING CONSTRUCTION AND COMPLIANCE WITH STATE AND FEDERAL REGULATIONS REGARDING SITE SAFETY SHALL SOLELY BE THE CONTRACTORS RESPONSIBILITY.

G–5. ALL DIMENSIONS, ELEVATIONS AND CONDITIONS MUST BE VERIFIED BY THE GENERAL CONTRACTOR OR RESPONSIBLE TRADES PRIOR TO COMMENCING WITH THE WORK, FABRICATION OR ORDERING MATERIALS. DO NOT SCALE DRAWINGS, USE DIMENSIONS SHOWN.

G–6. ANY DISCREPANCIES BETWEEN THESE DRAWINGS AND AS–BUILT CONDITIONS SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER IMMEDIATELY, BEFORE PROCEEDING WITH THE WORK.

G–7. THE INFORMATION SHOWN ON THESE PLANS CONCERNING THE TYPE AND LOCATION OF UNDERGROUND UTILITIES IS NOT GUARANTEED TO BE ACCURATE OR ALL INCLUSIVE. THE CONTRACTOR IS RESPONSIBLE FOR MAKING THEIR OWN DETERMINATIONS AS TO THE TYPE AND LOCATION OF UNDERGROUND UTILITIES AS MAY BE NECESSARY TO AVOID DAMAGE THERETO.

G–8. ALL APPLICABLE UTILITY DEPARTMENTS AND COMPANIES SHALL BE NOTIFIED BEFORE EXCAVATION IS STARTED. UTILITIES WITHIN 50 FEET OF AN EXCAVATION SHALL BE MARKED IN THE FIELD.

G–9. HOYLE TANNER, INC. WAIVES ANY AND ALL RESPONSIBILITY AND LIABILITY FOR PROBLEMS THAT ARISE DUE TO THE FAILURE OF THE CONTRACTOR:

TO FOLLOW THESE DRAWINGS AND SPECIFICATIONS AND THE DESIGN —INTENT THEY CONVEY.

TO NOTIFY HOYLE TANNER OF ANY DISCREPANCIES, ERRORS, OMISSIONS —OR CONFLICTS AND OBTAIN THEIR GUIDANCE TO RESOLVE.

G–10. DESIGN CRITERIA

A. DESIGN STANDARD: 2021 INTERNATIONAL BUILDING CODE

B. MOTOR DEAD LOAD: 500 LBS.

C. AASHTO ICE LOADING.

DRAWING NO.

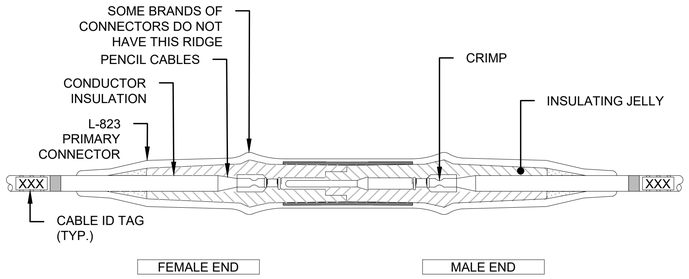
TG1.3

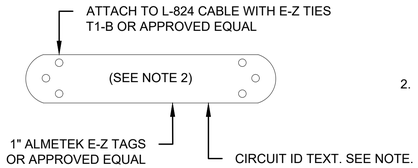
SHEET 99 OF 174



DETAIL NOTES:

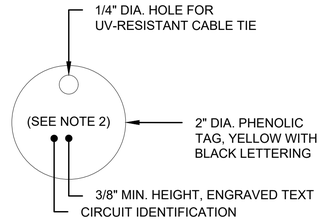
1. CLEAN THE CABLE THOROUGHLY 12" MIN. FROM THE END.
2. REMOVE INSULATION WITH A CABLE END PENCILER TOOL (ADB SAFEGATE # WS 49, CROUSE-HINDS # 10036-36 OR ENGINEER APPROVED EQUAL). DO NOT NICK THE CONDUCTOR.
3. CAREFULLY INSERT CABLE INTO CONNECTOR TO THE PROPER DEPTH. INSTALL PIN AND / OR RECEPTACLE WITH A CRIMPING TOOL WHICH MUST BE COMPLETELY CLOSED BEFORE THE TOOL MAY BE REMOVED. (SIEMENS #TMB25S, CROUSE-HINDS #33228 OR ENGINEER APPROVED EQUAL). CRIMPING DIES SHALL BE PROPER SIZED FOR FOR THE CABLE AND CONNECTOR USED.
4. BE SURE CABLE AND CONNECTOR FITTINGS ARE CLEAN. COAT THE CABLE INSULATION WITH INSULATING JELLY FROM THE CONNECTOR.
5. CLEAN CONNECTOR AND CABLE INSULATION WITH WAX OR GREASE SOLVENT TO REMOVE SURFACE SILICONE JELLY.
6. COMPLETE CONNECTION BY MATING THE PLUG AND RECEPTACLE. CAUTION: BE SURE THE CABLE DOES NOT SLIP OUT WHEN THE CONNECTION IS MADE.
7. ANY CONNECTOR WHICH IS CONTAMINATED BY DIRT OR OTHER DAMAGING MATERIAL SHALL BE REMOVED AND NOT REINSTALLED.
8. PROVIDE L-823 PRIMARY CONNECTOR KITS WITH INTEGRAL WATERTIGHT OVERLAPPING INSULATION FOR ALL 5KV AIRFIELD LIGHTING CIRCUITS MANUFACTURED BY AMERACE "SUPER KIT", INTEGRO "COMPLETE KIT", OR APPROVED EQUAL WHICH DOES NOT REQUIRE TAPE OR HEAT-SHRINK SPLICE TUBING. ALL OTHER TYPES OF CONNECTOR KITS REQUIRE SUPPLEMENTAL TAPE AND HEAT-SHRINK TUBING FOR WATERTIGHT SEAL.

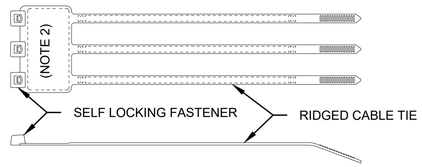
L-823 CONNECTOR INSTALLATION
NOT TO SCALE



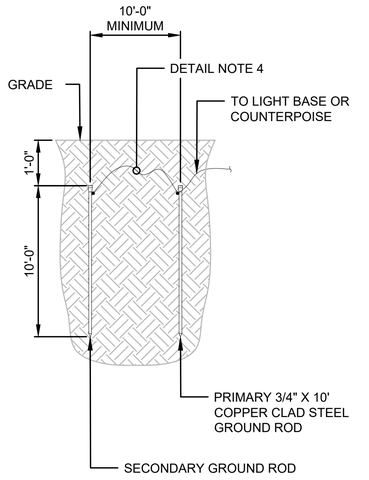
DETAIL NOTES:

1. ALL L-824 CABLES SHALL BE IDENTIFIED WITH A TAG WITH ITS RESPECTIVE CIRCUIT/LOOP NUMBER AT ALL ACCESSIBLE LOCATIONS. ATTACH THE ID TAG 12" FROM THE L-823 CONNECTORS. THE LOOPS SHALL BE IDENTIFIED ON EACH SIDE OF THE CONNECTORS.
2. NUMBERING SYSTEM FOR THE CABLE TAGS SHALL BE COORDINATED WITH ENGINEER PRIOR TO ORDERING TAGS.





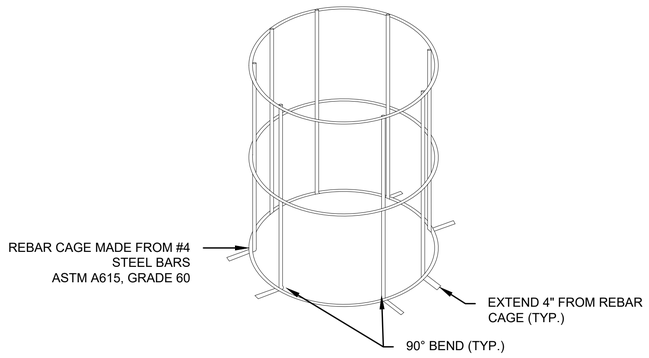
CABLE ID TAG
NOT TO SCALE



DETAIL NOTES:

1. PROVIDE GROUND RODS AT:
   - EVERY 500' OF COUNTERPOISE CABLE OR FRACTION THEREOF
   - EVERY 90' OF COUNTERPOISE (GUARD WIRE) CABLE OR FRACTION THEREOF FOR FAA TRENCHES WITH SPACING VARYING BY 10%-20% TO PREVENT RESONANCE. INSTALL GROUND ROD FOR FAA TRENCHES ON ALTERNATING SIDES OF COUNTERPOISE (GUARD WIRE) APPROX. 6' FROM TRENCH PER FAA STD-019F.
   - CHANGE IN TRENCH / DUCTBANK DIRECTION
   - TRENCH / DUCTBANK INTERSECTIONS
   - EACH END OF TRENCHES / DUCTBANKS
   - PAVEMENT EDGE OF DIRECTIONAL BORE CONDUITS
   - WITHIN 5' OF PULLCAN PLAZAS, MANHOLES, HANDHOLES, AND OTHER UNDERGROUND PULLING STRUCTURES
   - BASE MOUNTED ELEVATED LIGHT FIXTURES
   - AS NOTED ON PLANS
2. THE IMPEDANCE TO GROUND OF EACH GROUND ROD SHALL NOT EXCEED 25 OHMS. SHOULD THE IMPEDANCE EXCEED 25 OHMS THE CONTRACTOR SHALL INSTALL A SECOND GROUND ROD AT LEAST 10 FEET AWAY IN ACCORDANCE WITH THE NATIONAL ELECTRICAL CODE (NEC).
3. THE IMPEDANCE TO GROUND TO THE AIRFIELD ELECTRICAL VAULT GROUNDING SYSTEM WITH THE NEUTRAL DISCONNECTED SHALL NOT EXCEED 10 OHMS.
4. INTERCONNECT GROUND RODS WITH COUNTERPOISE WITH #6 AWG STRANDED COPPER EXOTHERMIC CONNECTION. RETEST AFTER THE SECOND GROUND ROD IS INSTALLED AND NOTIFY ENGINEER IF IMPEDANCE EXCEEDS 25 OHMS.
5. GROUND ELECTRODES SHALL BE INSTALLED IN ACCORDANCE WITH NEC 250.53. TOP OF GROUND ROD SHALL BE A MIN. OF 12□ BELOW FINISHED GRADE. WHERE ROCK PREVENTS VERTICALLY DRIVEN RODS, OBLIQUELY DRIVEN (UP TO 45 DEGREES FROM VERTICAL) OR TRENCHED HORIZONTAL GROUND RODS SHALL BE INSTALLED IN ACCORDANCE WITH NEC 250.53(G).
6. WHERE INSTALLING TRENCHED HORIZONTAL GROUND RODS, INSTALL 30□ DEEP OR BELOW FROST LINE WHICHEVER IS DEEPER. PLACE GROUND ENHANCEMENT MATERIAL (GEM) IN ACCORDANCE WITH MANUFACTURER'S INSTRUCTIONS WITH A MIN. 1□ TOP AND BOTTOM COVER. GEM MUST BE PERMANENT AND MAINTENANCE-FREE AND MAINTAIN ITS EARTH RESISTANCE WITH TIME. GEM MUST SETUP FIRMLY AND NOT DISSOLVE OR DECOMPOSE, OR OTHERWISE POLLUTE THE SOIL OR THE LOCAL WATER TABLE. THE GEM MUST ALSO BE SUITABLE FOR INSTALLATION IN A SLURRY FORM. GEM SHALL NOT DEPEND ON THE CONTINUOUS PRESENCE OF WATER TO MAINTAIN ITS CONDUCTIVITY.
7. FOR SITUATIONS IN WHICH ENCOUNTERING ROCK DOES NOT PERMIT DRIVING A GROUND ROD THE FULL DISTANCE REQUIRED, A GROUNDING PLATE MAY BE SUBSTITUTED AS APPROVED BY THE ENGINEER.
8. GROUND RODS AND OTHER UNDERGROUND GROUNDING CONNECTIONS SHALL BE EXOTHERMICALLY WELDED. EXOTHERMIC CONNECTIONS SHALL BE IN ACCORDANCE WITH MANUFACTURER'S GUIDELINES. CLEAN ALL METAL SURFACES PRIOR TO MAKING CONNECTIONS. SOLDER, BOLT AND WASHER TYPE CONNECTIONS ARE PROHIBITED.

GROUND ROD INSTALLATION
NOT TO SCALE



DETAIL NOTES:

1. EXOTHERMICALLY WELD GROUND TO REBAR CAGE.
2. SECURE INDIVIDUAL REBAR SECTIONS WITH STEEL WIRE TIES TO FORM REBAR CAGE.
3. HEIGHT OF CAGE SHALL BE 3" (MIN.) LESS IN HEIGHT FROM THE TOP OF LIGHT BASE.

IN-PAVEMENT FIXTURE REINFORCEMENT CAGE
NOT TO SCALE

DETAIL NOTES:

1. HAND LETTERING NOT ALLOWED ON MARKERS. LETTERING IS TO BE BOLDLY IMPRESSED. LINE WIDTH MUST BE 1/2" MIN. DEPTH OF IMPRESSION MUST BE 1/4" MIN.
2. ARROW ON MARKER TO INDICATE DIRECTION OF DUCTS OR CABLE RUNS (WHERE APPLICABLE).
3. ALL MARKERS ARE CONCRETE WITH A MIN. OF 4" IN THICKNESS.

NOTES:

1. SEE MK1.8 FOR POINT TABLE INFORMATION
2. TAXIWAY MARKINGS ARE YELLOW.
3. WHITE MARKINGS TAKE PRECEDENCE OVER YELLOW MARKINGS EXCEPT WHERE NOTED. WHEN A YELLOW CENTERLINE MARKING CROSSES WHITE MARKINGS THE YELLOW MARKING IS BROKEN 6" EITHER SIDE OF THE WHITE MARKING.
4. ALL MARKINGS THAT ARE BEING REMOVED SHALL BE REMOVED TO 100%.
5. ALL PAVEMENT SHALL BE CLEAN OF DEBRIS USING A VACUUM SWEEPER, AND IT SHALL BE DRY BEFORE PAINTING.
6. ANY NEWLY PAINTED MARKINGS THAT ARE DAMAGED DUE TO CONSTRUCTION ACTIVITIES SHALL BE REPAINTED AT NO ADDITIONAL CHARGE.
7. ONLY MARKINGS PAINTED ON EXISTING PAVEMENT SHALL BE OUTLINED WITH BLACK PAINT.
8. ALL LEAD-IN LINES ON THE EXISTING RUNWAYS SHALL BE PERMANENT PAINT WITH BEADS ONLY, WHICH SHALL BE OUTLINED IN (6") BLACK PAINT (PERMANENT PAINT WITHOUT BEADS). THESE MARKINGS SHALL BE PAINTED AT THE SAME TIME THE TEMPORARY MARKINGS ARE PAINTED, BEFORE OPENING EACH PHASE.
9. ALL MARKINGS OUTSIDE THE LIMIT OF WORK THAT HAVE BEEN COMPROMISED BY HAULING AND TACK COAT SHALL BE REPAINTED WITH PERMANENT PAINT WITH BEADS. THESE MARKINGS WILL BE IDENTIFIED BY THE ENGINEER/AIRPORT PRIOR TO STARTING PHASE III. THESE MARKINGS WILL NOT BE OUTLINED IN BLACK PAINT. THE CONTRACTOR WILL BE PAID FOR THESE MARKINGS WITH BEADS AT A SF UNIT COST PER CONTRACT. WHILE HAULING, THE CONTRACTOR SHALL TAKE SPECIAL CARE TO NOT HAUL OVER MARKINGS IF AT ALL POSSIBLE.

Boring Log: B-1
Total Depth (ft): 9
Sheet 1 of 1

Project Name: Reconstruct Runway 2-20
RWG&A Project No. 0495-113-23
Location: New Haven, Connecticut
Client: Hoyle, Tanner & Associates, Inc.
RWG&A Representative: Tom Snow
Boring Location: See Exploration Location Plan
Boring Abandonment Method: Backfill with cuttings
Observed Water Depth: 5'

Drilling Co.: Northern Test Boring
Drill Rig: Diedrich D-50
Driller Rep.: Mike Nadeau
Date Started: 01/17/24
Date Completed: 01/17/24
Surface Elevation:
Drilling Method: SSA/ Open Hole
Casing Type: 4" Spin Casing

DEPTH, FT.	SYMBOL	SAMPLES	SAMPLE NUMBER	DESCRIPTION OF MATERIAL	SAMPLE RECOVERY, IN	BLOWS PER 6"	SPT-N VALUE	MOISTURE CONTENT %	LAB TESTS
0			S-1	FILL; Topsoil and organic material (6 inches).	15	3 3 3	6		
				FILL; Silty sand with gravel, dry, coarse to fine sand, little silt, little gravel, red-brown.					
			S-2	SAND (SP); Loose, medium to fine sand, few gravel, red-brown.	5	2 2 2	4		
5			S-3		7	2 1 1	4		
			S-4		10	3 3 3	6		
10				Bottom of exploration at 9.0'; Not refusal.

Boring Log: B-20
Total Depth (ft): 6.2
Sheet 1 of 1

Project Name: Reconstruct Runway 2-20
RWG&A Project No. 0495-113-23
Location: New Haven, Connecticut
Client: Hoyle, Tanner & Associates, Inc.
RWG&A Representative: Tom Snow
Boring Location: See Exploration Location Plan
Boring Abandonment Method: Backfill with cuttings
Observed Water Depth: Not Obs.

Drilling Co.: Northern Test Boring
Drill Rig: Diedrich D-50
Driller Rep.: Mike Nadeau
Date Started: 01/17/24
Date Completed: 01/17/24
Surface Elevation:
Drilling Method: SSA/ Open Hole
Casing Type: N/A

DEPTH, FT.	SYMBOL	SAMPLES	SAMPLE NUMBER	DESCRIPTION OF MATERIAL	SAMPLE RECOVERY, IN	BLOWS PER 6"	SPT-N VALUE	MOISTURE CONTENT %	LAB TESTS
0			S-1	FILL; Topsoil and organic material (6 inches).	15	2 3 5	8		
				FILL; Silty sand, red-brown.		5			
			S-2	SILTY SAND (SM); Loose, moist, coarse to fine sand, some silt, trace organic fibers, gray to dark gray.	15	5 5 5	10		
5			S-3	SILTY SAND WITH GRAVEL (SM); Very dense, wet, coarse to fine sand, little gravel, little silt, brown.	3	50/1" 50/3"	50+		
				Bottom of exploration at 6.2'; Auger refusal on possible bedrock or boulder.

NOTE:

THESE NOTES ARE INTENDED TO HIGHLIGHT THE REQUIREMENTS SET FORTH IN THE PROJECT SPECIFICATIONS, BUT, IN ALL CASES, REQUIREMENTS OF THE PROJECT SPECIFICATIONS SHALL GOVERN.

AIRPORT OPERATIONS COORDINATOR

THE OWNER SHALL PROVIDE AN OPERATIONS COORDINATOR WHO SHALL HAVE THE AUTHORITY TO OPEN AND CLOSE FACILITIES, ISSUE AND REMOVE NOTICE TO AIRMEN (NOTAM'S), AND TO COORDINATE WITH AIRPORT USERS. COORDINATION WITH NOTAM ISSUANCE & CONSTRUCTION ACTIVITIES SHALL BE THROUGH THE ENGINEER.

THE CONTRACTORS ATTENTION IS DIRECTED TO THE CONSTRUCTION SAFETY AND PHASING PLAN REGARDING ACCESS TO THE JOB SITE. THE CONTRACTOR SHALL BE RESPONSIBLE TO ADHERE TO THE REQUIREMENTS OF THE TECHNICAL SPECIFICATIONS REGARDING AIRPORT SECURITY.

PAVEMENTS AND SAFETY AREAS. THE WORK VEHICLES ONCE INSIDE THE PERIMETER FENCING, SHALL REMAIN CLEAR OF THE ACTIVE RUNWAY, TAXIWAY AND SAFETY AREAS. WHEN NECESSARY, THE CONTRACTOR SHALL PROVIDE FLAGPERSONS AND RADIO CONTROL AS REQUIRED BY **X-XXX** OF THE TECHNICAL SPECIFICATIONS. ALL HAUL ROUTES SHALL BE MAINTAINED PER SECTION "**X-XXX** HAUL ROUTES" OF THE TECHNICAL SPECIFICATIONS.

NORMAL AIRPORT OPERATION WILL BE CONDUCTED ON THE AIRFIELD DURING CONSTRUCTION AND THE WORK SHALL BE CARRIED ON IN SUCH A MANNER AS NOT TO INTERFERE WITH THE NECESSARY OPERATION OF THE AIRPORT. THE CONTRACTOR SHALL TAKE ALL PRECAUTIONS NECESSARY TO ENSURE THE SAFETY OF OPERATING AIRCRAFT AS WELL AS HIS OWN EQUIPMENT AND PERSONNEL.

ALL AIRPORT PAVEMENTS SHALL BE KEPT CLEAR AND CLEAN AT ALL TIMES OF ROCKS, DIRT, MUD, AND OTHER DEBRIS CARRIED ONTO THE AIRPORT PAVEMENT. THE CONTRACTOR'S EQUIPMENT MUST BE REPORTED TO THE ENGINEER OR THE AIRPORT OPERATIONS COORDINATOR. THE AIRPORT OPERATIONS COORDINATOR WILL THEN CLOSE THE AFFECTED AREA TO THE SATISFACTION OF THE AIRPORT OPERATIONS COORDINATOR.

AIRPORT SECURITY

THE CONTRACTOR SHALL COMPLY WITH ALL AIRPORT SECURITY REQUIREMENTS AS DIRECTED BY THE AIRPORT OPERATIONS COORDINATOR. WORK IN THE AIRPORT OPERATIONS AREA (AOA) WILL REQUIRE CRIMINAL BACKGROUND CHECKS. PARKING OF PERSONAL CARS AT THE WORK SITES WILL NOT BE PERMITTED. THE CONTRACTOR AS A SUBSIDIARY OBLIGATION, SHALL PROVIDE ADEQUATE AND SAFE TRANSPORTATION TO/FROM THE WORK AREA. EMPLOYEES AND DRIVERS OF WORK VEHICLES WILL BE INSTRUCTED BY HIS/HER EMPLOYER FROM THE AREA WHERE THE CARS ARE PARKED, AS TO PROPER ACCESS ROADS AND WILL BE CAUTIONED THAT UNAUTHORIZED USE OF AIRCRAFT PAVEMENTS OR OTHER AREAS OUTSIDE THE DESIGNATED WORK AREA MAY LEAD TO THEIR ARREST AND SUBSEQUENT PAYMENT OF FINES. ALL ORDERS FOR MATERIAL SHALL INSTRUCT THE SUPPLIER OF THE PROCEDURES TO BE FOLLOWED.

THE CONTRACTOR SHALL SUBMIT TO THE ENGINEER WITHIN 10 DAYS AFTER SIGNING OF THE CONTRACT A WRITTEN METHOD OF OPERATIONS DETAILING THE PRECAUTIONS HE/SHE PROPOSES FOR THE CONTROL OF VEHICLE TRAFFIC INCLUDING FLAGPERSONS, SIGNS, ESCORTS AND ANY OTHER MEASURES HE/SHE PROPOSES. AFTER APPROVAL OF HIS/HER OPERATING SCHEDULE, THE CONTRACTOR SHALL FOLLOW IT EXPLICITLY. THE OWNER MAY CLOSE THE WORK AREA AT ANY TIME THIS SCHEDULE IS VIOLATED SO AS NOT TO ENDANGER AIRPORT OR AIRCRAFT OPERATIONS. SUCH CLOSURE SHALL NOT BE CONSIDERED A VALID REASON FOR EXTENDING THE CONTRACT TIME OR FOR ANY CLAIM FOR EXTRAS BY THE CONTRACTOR. ALL SECURITY ARRANGEMENTS SHALL BE SUBJECT TO THE APPROVAL OF THE OWNER. THE CONTRACTOR'S PERSONNEL AND VEHICLES WILL NOT HAVE ACCESS TO THE ENTIRE AIRPORT, BUT SHALL BE LIMITED TO THE WORK AREA AND THE STAGING AREA.

AIRCRAFT OPERATIONS AREA

THE CONTRACTOR SHALL KEEP HIS/HER PERSONNEL AND EQUIPMENT AT LEAST 250 FEET FROM THE CENTERLINE OF ACTIVE RUNWAYS AND AT LEAST 130 FEET FROM THE CENTERLINE OF ACTIVE TAXIWAYS AND APRONS FOR AIRCRAFT MOVEMENTS UNLESS PRIOR APPROVAL HAS BEEN OBTAINED.

OPEN TRENCHES OR EXCAVATIONS

THE CONTRACTOR WILL NOT BE PERMITTED TO LEAVE ANY TRENCHES OR OTHER EXCAVATIONS OPEN WHEN THE CONTRACTOR IS NOT ON THE SITE. IN ADDITION, NO EXCAVATIONS EXCEEDING 3 INCHES IN DEPTH SHALL BE LEFT OPEN WITHIN THE RUNWAY AND TAXIWAY SAFETY AREAS WHILE THE RUNWAYS, TAXIWAYS, AND APRONS ARE IN USE UNLESS THE EXCAVATIONS ARE COVERED WITH APPROVED PLATES. STEEL PLATES SHALL BE CAPABLE OF BEARING THE HEAVIEST AIRCRAFT/ VEHICLE USING THE AIRPORT/ROADWAY OVER THE SPAN IN WHICH THEY ARE TO BE USED. THE CONTRACTOR SHALL KEEP THE LENGTH OF OPEN TRENCHES COVERED WITH STEEL PLATES TO A MINIMUM, BUT IN NO CASE SHALL THE LENGTH EXCEED THE DISTANCE BETWEEN TWO ADJACENT MANHOLES OR CATCH BASINS.

ALL EXCAVATIONS SHALL BE BACKFILLED AND THE PAVEMENT REPAIRED AND PROPERLY CURED PRIOR TO THE AREA BEING REOPENED TO TRAFFIC.

PRIOR TO THE CLOSE OF WORK EACH NIGHT, THE CONTRACTOR SHALL ENSURE THAT THE WORK AREAS ARE GRADED AWAY FROM THE PAVEMENTS AT A MAXIMUM SLOPE OF 5% AND SHALL BE LEFT IN SUCH A CONDITION THAT IT WILL DRAIN READILY AND EFFECTIVELY AND WILL NOT POSE A HAZARD TO VEHICLES OR AIRCRAFT. NO PILES OF SOIL SHALL BE LEFT UNSPREAD, NO SHARP CHANGES IN GRADE WILL BE PERMITTED, AND THE SURFACE SHALL BE THOROUGHLY COMPACTED.

DISPOSAL OF SURPLUS AND UNSUITABLE MATERIALS

ALL DRAINAGE STRUCTURES AND PIPES, ALL BITUMINOUS CONCRETE PAVEMENT AND ALL PORTLAND CEMENT CONCRETE PAVEMENT SHALL BE LEGALLY DISPOSED OF BY THE CONTRACTOR OFF AIRPORT PROPERTY.

SURPLUS EXCAVATION MATERIALS, SHALL BE INCIDENTAL TO THE COST OF THE ITEM THAT GENERATES THE MATERIAL.

ALL EQUIPMENT, MANPOWER, TRAFFIC CONTROL, FLAGMEN, SIGNS, BARRICADES, GATES, LEGAL POLICE OFFICERS (IF REQUIRED) AND OTHER ITEMS NECESSARY FOR THE SAFE AND EFFICIENT HAULING OF EXCESS MATERIALS IS THE RESPONSIBILITY OF THE CONTRACTOR AND INCIDENTAL TO THE COST OF THE ITEM WHICH GENERATES THE MATERIAL.

ALL UNSUITABLE MATERIALS SHALL BE LEGALLY DISPOSED OF OFF AIRPORT PROPERTY BY THE CONTRACTOR. NO SEPARATE MEASUREMENT AND PAYMENT WILL BE MADE FOR THE DISPOSAL, BUT RATHER THE DISPOSAL SHALL BE INCIDENTAL TO THE ITEM THAT GENERATES THE MATERIAL TO BE DISPOSED OF.

UNDERGROUND UTILITIES AND CABLES

THE APPROXIMATE LOCATIONS OF KNOWN UTILITIES AND UNDERGROUND CABLES ARE SHOWN ON THE CONTRACT DRAWINGS. PRIOR TO COMMENCEMENT OF ANY EXCAVATION THE CONTRACTOR SHALL COORDINATE ALL WORK ON AND IN THE VICINITY OF THE UNDERGROUND UTILITIES AND CABLES WITH THE FOLLOWING AGENCIES AS APPROPRIATE.

CALL BEFORE YOU DIG		(800) 344-7233
SOUTHERN CT GAS		(203) 795-7783
FRONTIER COMMUNICATIONS (TELECOMMUNICATIONS)		(800) 921-8102
UNITED ILLUMINATION, INC. (ELECTRIC)		(203) 843-5708
SOUTH CENTRAL REGIONAL WATER AUTHORITY		(203) 401-2604
GREATER NEW HAVEN REGIONAL WATER		
POLLUTION CONTROL AUTHORITY (GNHWPCA)		(203) 466-5280
NEW HAVEN UTILITIES ENGINEER		(203) 946-8099
NEW HAVEN PUBLIC WORKS DEPT		(203) 946-7700
THE FEDERAL AVIATION ADMINISTRATION AIRWAYS		
FACILITY SECTOR FIELD OFFICE	(203) 464-8897 OR	(203) 605-7512
OPERATIONS AND MAINTENANCE		(203) 469-7773

THE CONTRACTOR SHALL REPAIR, AT HIS/HER OWN EXPENSE, ANY UNDERGROUND CABLES OR UTILITIES DAMAGED BY HIS/HER OPERATIONS INCLUDING ANY DAMAGE DONE BY DRIVING HIS/HER EQUIPMENT OVER EXISTING UNDERGROUND CABLES OR UTILITIES. THE REPAIR OF FAA CABLES SHALL BE INSPECTED AND APPROVED BY THE FAA.

RADIO CONTROL

THE CONTRACTOR SHALL HAVE TWO-WAY RADIO COMMUNICATION BETWEEN THE RADIO CONTROL VEHICLE AND HIS/HER FIELD OFFICE, SUPERINTENDENT'S VEHICLE, FLAGPERSONS, AND ESCORT VEHICLES. NO FAA OR OTHER AIRPORT FREQUENCY WILL BE USED FOR THIS PURPOSE. THESE RADIOS SHALL BE PURCHASED, INSTALLED, MAINTAINED AND OPERATED AT THE CONTRACTOR'S EXPENSE.

RADIO CONTROL WILL BE REQUIRED WHENEVER THE CONTRACTOR IS WORKING IN OR ADJACENT TO THE AIRCRAFT OPERATIONS AREAS. RADIO CONTROL AND FLAGPERSONS WILL BE REQUIRED WHENEVER THE CONTRACTOR'S VEHICLE AND EQUIPMENT ARE ON OR CROSSING ACTIVE RUNWAYS, TAXIWAYS OR APRONS.

FLAG PERSON

THE CONTRACTOR SHALL PROVIDE FLAGPERSONS AT EACH ACTIVE RUNWAY, TAXIWAY AND APRON PAVEMENT BEING CROSSED BY HIS/HER EQUIPMENT TO ASSURE THAT MOVING AIRCRAFT ARE GIVEN THE RIGHT-OF-WAY AT ALL TIMES. FLAG PERSONS AND EQUIPMENT ARE TO MEET CURRENT MUTCD STANDARDS. AIRPORT RESERVES THE RIGHT TO SHUTDOWN WORK ACTIVITIES, WITHOUT PENALTY, FOR NON-CONFORMANCE TO REGULATIONS OR FOR UNSAFE CONTROLS. FLAGPERSONS SHALL ALSO BE REQUIRED WHEN VEHICLES ON A SERVICE ROAD ARE CROSSING THE APPROACH TO AN ACTIVE RUNWAY IN ADDITION TO PREVIOUSLY SPECIFIED RADIO CARS. THE FLAGPERSONS SHALL BE CAREFULLY SELECTED AND FULLY INSTRUCTED AS TO THEIR DUTIES IN REGULATING THE CONTRACTOR'S EQUIPMENT CROSSING THE AIRCRAFT PAVEMENT. THEY SHALL ALSO BE PROVIDED WITH BROOM, SHOVEL, AND BRUSH AND INSTRUCTED TO REMOVE ANY DEBRIS THAT MIGHT BE LEFT BY THE EQUIPMENT ON THE AIRCRAFT PAVEMENT WHERE IT MIGHT BE INGESTED BY AN AIRCRAFT ENGINE. EACH FLAGPERSON SHALL BE PROVIDED WITH, AND SHALL WEAR AT ALL TIMES THEY ARE DIRECTING TRAFFIC, AN APPROVED STRIPED VEST OF A TYPE SPECIFICALLY DESIGNED FOR USE BY TRAFFIC CONTROL PERSONNEL.

BARRICADES

THE CONTRACTOR SHALL FURNISH AND PLACE BARRICADES AS REQUIRED TO CLEARLY DEFINE AND CLOSE WORK AREAS TO AIRCRAFT OPERATIONS, SEE CONSTRUCTION SAFETY AND PHASING PLANS.

THE BARRICADES SHALL BE PLACED AS SHOWN ON THE PLANS OR AS DIRECTED BY THE ENGINEER. THE BARRICADES SHALL BE LOW PROFILE TYPE, AS LOW AS POSSIBLE TO THE GROUND, EASILY COLLAPSIBLE UPON CONTACT WITH AN AIRCRAFT, AND OF LOW MASS. THE BARRICADES SHALL BE BRIGHT ORANGE AND WHITE AND WHEN USED TO DEFINE HAZARDOUS AREAS AT NIGHT SHALL BE LIGHTED IN A MANNER APPROVED BY THE PROGRAM MANAGER AND OWNER. NO OPEN FLAME LIGHTING SHALL BE USED. ALL TEMPORARY LIGHTS AND BARRICADES SHALL BE WEIGHTED AGAINST JET BLASTS (100 MPH).

HAUL ROUTES

PRIOR TO THE START OF CONSTRUCTION, THE CONTRACTOR SHALL PREPARE A PLAN SHOWING PROPOSED HAUL ROUTES FOR THE APPROVAL OF THE ENGINEER. WHEN A PUBLIC HIGHWAY MUST BE USED FOR HAUL ROUTES, IT WILL BECOME THE CONTRACTOR'S RESPONSIBILITY TO OBTAIN THE PROPER PERMITS NEEDED FOR THIS FUNCTION AND TO OBEY RULES AND REGULATIONS PERTINENT TO THE PUBLIC HIGHWAYS.

HAUL ROUTES ON THE AIRPORT SHALL BE AS APPROVED BY THE ENGINEER. THE CONTRACTOR SHALL STAKE OR OTHERWISE DELINEATE THE HAUL ROUTES. THE CONTRACTOR'S VEHICLES AND EQUIPMENT SHALL OPERATE WITHIN THE LIMITS OF THE MARKED HAUL ROUTE. CONTRACTOR'S VEHICLES WILL NOT BE ALLOWED ACCESS TO PORTIONS OF THE AIRPORT OTHER THAN THE WORK AND STAGING AREAS.

ALL PAVED HAUL ROADS OR ACCESS ROADS SHALL BE KEPT CLEAN AT ALL TIMES TO PREVENT THE ACCUMULATION OF DIRT AND MUD AND THE GENERATION OF DUST BY SWEEPING, WASHING OR OTHER METHODS AS DIRECTED BY THE OWNER. UNPAVED HAUL ROADS, IF ANY, SHALL BE MAINTAINED BY BLADING AND FILLING WHEN DIRECTED BY THE OWNER AND DUST SHALL BE CONTROLLED AT ALL TIMES.

PRIOR TO THE START OF WORK, THE CONTRACTOR SHALL TAKE AND DELIVER TO THE OWNER, PHOTOGRAPHS OF ALL PROPOSED HAUL ROUTES. VIEWS SHALL BE RESTORED TO THEIR ORIGINAL CONDITION OR BETTER BEFORE THE CONTRACT WILL BE CONSIDERED COMPLETE. ALL RESTORATION AND DUST CONTROL ON HAUL ROADS SHALL BE AT THE CONTRACTOR'S EXPENSE.

AIRPORT OPERATIONS AND SAFETY REQUIREMENTS

THE CONTRACTOR SHALL STAKE AND PERMANENTLY MARK ON THE GROUND WITH A READILY RECOGNIZABLE MARKING (GRADE STAKES W/YELLOW ROPE, LIT BARRICADES) THE RESTRICTION LINES PARALLEL TO THE TAXIWAYS AND RUNWAYS ADJACENT TO THE WORK AND THE APPROACH ZONE LIMITS SO THAT PERSONNEL CAN READILY RECOGNIZE THE LIMITATIONS.

WHEN PERMISSION HAS BEEN GRANTED TO WORK INSIDE THESE LIMITS, NO EQUIPMENT SHALL BE LEFT WITHIN THE LINES WHEN NOT ACTUALLY WORKING. DURING BREAKS IN THE DAILY WORK SCHEDULE, NIGHTS, WEEKENDS, OR THE DAYS WHEN WORK IS NOT PERMITTED OR IS NOT PROGRESSING, THE EQUIPMENT SHALL BE LOCATED OUTSIDE OF THESE RESTRICTION LINES. ALL BOOMS SHALL BE LOWERED WHEN THE EQUIPMENT IS NOT IN OPERATION. NO CONSTRUCTION OPERATIONS, INCLUDING AN OPEN FLAME SUCH AS WELDING OR BURNING, SHALL BE CARRIED ON NEAR ANY AIRCRAFT.

EACH CONTRACTOR'S MOTORIZED VEHICLE OPERATING IN AN AIRCRAFT MOVEMENT AREA SHALL BE EQUIPPED WITH AN AMBER FLASHING LIGHT AND A 3-FOOT SQUARE FLAG CONSISTING OF INTERNATIONAL ORANGE AND WHITE SQUARES NOT LESS THAN ONE FOOT SQUARE DISPLAYED IN FULL VIEW ABOVE THE VEHICLE.

IN ADDITION, ALL CONTRACTOR'S VEHICLES SHALL HAVE THE COMPANY IDENTIFICATION PLAINLY VISIBLE ON BOTH SIDES OF THE VEHICLE IN ORDER TO IDENTIFY THE VEHICLE.

MAINTENANCE OF THE CONSTRUCTION SITE

THE CONTRACTOR SHALL KEEP THE CONSTRUCTION SITE FREE OF PAPER, BOXES, CLOSED CONTAINERS AND OTHER DEBRIS WHICH COULD BE BLOWN ONTO THE RUNWAYS AND TAXIWAYS. LOOSE TRASH PLACED IN TRUCK BED IS PROHIBITED.

THE CONTRACTOR SHALL MAINTAIN, AT THE CONSTRUCTION SITE, THE EQUIPMENT FOR THE APPLICATION OF WATER TO CONTROL DUST WITHIN THE CONSTRUCTION SITE AND ON HAUL ROADS. THE EQUIPMENT SHALL BE EQUIPPED WITH A SHUT-OFF CONTROL VALVE, WHICH CAN BE OPERATED FROM THE CAB BY THE OPERATOR. THE CONTRACTOR SHALL APPLY WATER FOR DUST CONTROL AS NECESSARY TO PREVENT DUST FROM THE CONSTRUCTION SITE AND/OR HAUL ROADS FROM BEING A HAZARD TO AIRCRAFT AND FROM BEING A NUISANCE TO THE PUBLIC AND AS DIRECTED BY THE ENGINEER.

PHOTOS

THE CONTRACTOR SHALL HAVE TWO HIGH RESOLUTION DIGITAL CAMERAS ON SITE AT ALL TIMES AND SHALL SUPPLY ONE OF THE TWO TO THE ENGINEER. THESE CAMERAS SHALL BE PURCHASED, INSTALLED, MAINTAINED AND OPERATED AT THE CONTRACTOR'S EXPENSE. THE CONTRACTOR SHALL TAKE PHOTOS DURING CONSTRUCTION IN ACCORDANCE WITH SPECIFICATION SECTION **X-XXX**.

SHEET NUMBER

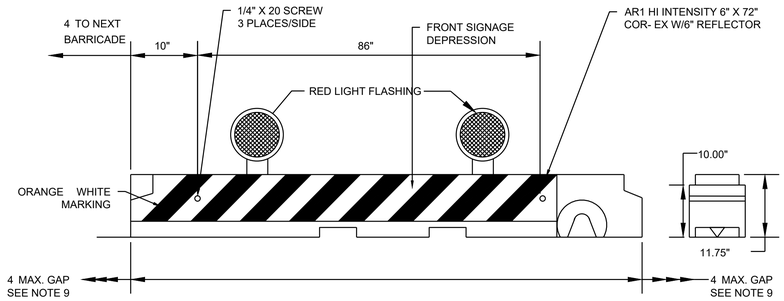
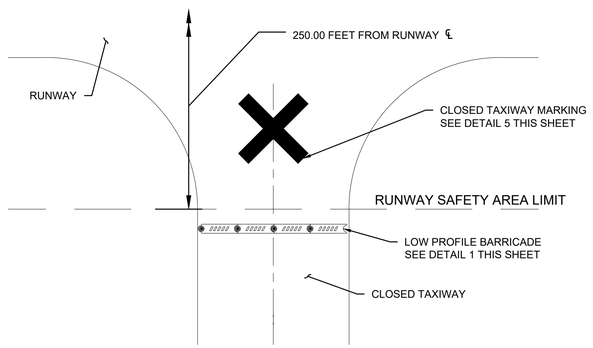
CS1.03B



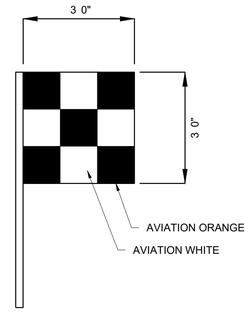
NOTES:

1. CONTRACTOR MUST USE AIRFIELD SOLUTIONS AS 3000 WITH 2 SOLAR LIGHTS.
2. CONTRACTOR MUST UTILI E ALTERNATE ORANGE AND WHITE BARRICADE BODIES.
3. IN THE PRESENCE OF FOOT TRAFFIC, AND WHERE AGREED UPON BY HVN, BARRICADES MUST BE INTERLOCKING AND HAVE NO SPACES BETWEEN THEM. GAPS BETWEEN BARRICADES MUST BE NO MORE THAN 4 FEET.
4. ALL BARRICADES MUST BE MOVED AT LEAST ONCE A WEEK AND THE CONTRACTOR MUST SWEEP ANY DEBRIS THAT HAS ACCUMULATED AND REMOVE THIS DEBRIS FROM SITE. THE BARRICADES MUST THEN BE REPLACED AT THE APPROPRIATE LOCATION.
5. THE CONTRACTOR WILL BE RESPONSIBLE FOR PLACING, MOVING, AND PROTECTING BARRICADES THROUGHOUT THE DURATION OF THE PROJECT. NIGHTLY BARRICADE PLACEMENT WILL BE CONDUCTED PRIOR TO THE START OF NIGHTTIME WORK AND UNDER ESCORT BY HVN.
6. BARRICADES MUST BE PLACED AT LOCATIONS SHOWN ON PLANS OR AS DIRECTED BY HVN.
7. CONTRACTOR WILL BE RESPONSIBLE FOR MAINTAINING BARRICADES (INCLUDING LIGHTS) IN WORKING CONDITION AT ALL TIMES.
8. BARRICADES ARE TO BE SECURED FROM JET BLAST WITH SAND BAGS OR AN E UIVALENT APPROVED METHOD.
9. THE CONTRACTOR WILL ADJUST THE MAX GAP BETWEEN BARRICADES AS APPROVED AND DIRECTED BY HVN IN ORDER TO PERMIT EMERGENCY VEHICLE ACCESS, FACILITATE VEHICULAR TRAFFIC AND OTHER WORK.
10. LOW PROFILE BARRICADES MUST BE PROVIDED BY THE CONTRACTOR. THE CONTRACTOR MUST SUPPLY A SUFFICIENT NUMBER OF BARRICADES FOR THE DURATION OF THE PROJECT. IT IS THE CONTRACTORS RESPONSIBILITY TO DETERMINE THE NUMBER OF BARRICADES FOR THE WORK AREAS AS IT RELATES TO THE CONTRACTOR S WORK PLAN. THE COST FOR FURNISHING THE BARRICADES AS WELL AS MAINTENANCE, PLACEMENT AND SECURING (SEE NOTES 1-9), WILL BE CONSIDERED INCIDENTAL TO SAFETY AND SECURITY. CONTRACTOR TO ASSUME AT LEAST XXX LF OF BARRICADES FOR BIDDING PURPOSES. BARRICADES WILL BE TURNED OVER TO THE AIRPORT AT THE CONCLUSION OF THE PROJECT,

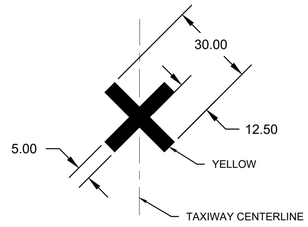
1 / CS0.01 — LOW PROFILE BARRICADE
SCALE: NTS



3 / CS0.01 — CLOSED TAXIWAY DETAIL
SCALE: NTS



2 / CS0.01 — CONSTRUCTION SAFETY FLAG
SCALE: NTS



NOTES:

1. CONTRACTOR TO PLACE TEMPORARY CLOSED TAXIWAY MARKINGS AS SHOWN ON PLANS.
2. HVN TO PROVIDE DIRECTION ON THE SAFEST LOCATION FOR THE PLACEMENT OF THIS MARKING.
3. THE CLOSED TAXIWAY MARKINGS MUST BE IN ACCORDANCE WITH FAA AC 150/5340-1 AND AC 150/5370-2 (LATEST EDITION).
4. CLOSED TAXIWAY MARKINGS MUST CONSIST OF TEMPORARY PAVEMENT MARKINGS.
5. THE COST FOR THE TEMPORARY CLOSED TAXIWAY MARKINGS WILL BE CONSIDERED INCIDENTAL TO SAFETY AND SECURITY.

4 / CS0.01 — TEMPORARY CLOSED TAXIWAY MARKINGS

\ARHELEDP4\STSHEETS\240460169-Cc001-C0002.dwg

GENERAL

1. COASTAL JURISDICTION LINE INFORMATION WAS OBTAINED FROM CTDEEP.
2. WORK UNDER THIS PROJECT SHALL BE PERFORMED IN ACCORDANCE WITH THE "STATE OF CONNECTICUT, DEPARTMENT OF TRANSPORTATION, STANDARD SPECIFICATIONS FOR ROADS, BRIDGES, FACILITIES AND INCIDENTAL CONSTRUCTION, FORM 818, 2020" AS SUPPLEMENTED THROUGH JULY 2023" ("CTDOT FORM 818") AND SPECIAL PROVISIONS.
3. ALL DIMENSIONS AND ELEVATIONS MUST BE VERIFIED IN THE FIELD BY THE CONTRACTOR PRIOR TO THE SUBMISSION OF WORKING DRAWINGS, PROCUREMENT OF MATERIALS AND START OF CONSTRUCTION. ALL ADJUSTMENTS SHALL BE REVIEWED BY THE ENGINEER.
4. THE CONTRACTOR SHALL IDENTIFY, LOCATE, AND PROTECT ALL EXISTING BOUNDS, MONUMENTS, AND BENCHMARKS. THE CONTRACTOR SHALL OBTAIN APPROVAL FROM THE ENGINEER BEFORE ANY DISTURBANCE OR RELOCATION.
5. THE CONTRACTOR SHALL PROVIDE ACCESS TO ALL PROPERTIES AT ALL TIMES DURING CONSTRUCTION. THE CONTRACTOR SHALL PROVIDE ADEQUATE SIGHT DISTANCE FOR ALL DRIVEWAYS AND OTHER ACCESS POINTS DURING CONSTRUCTION.
6. THE CONTRACTOR SHALL PROPOSE CONSTRUCTION ENTRANCES TO THE ENGINEER FOR APPROVAL BEFORE THE START OF ANY CLEARING OPERATION. ANTI-TRACKING PADS IN ACCORDANCE WITH SECTION 2.11 SHALL BE GRADED TO PREVENT RUNOFF FROM ENTERING THE ROADWAY. LOCATION OF ANTI-TRACKING PADS IS SUBJECT TO APPROVAL BY THE ENGINEER. SEE MISCELLANEOUS DETAILS FOR ADDITIONAL INFORMATION.
7. ALL SLOPES, TEMPORARY OR PERMANENT, SHALL RECEIVE TURF ESTABLISHMENT OR EROSION CONTROL MATTING IN ACCORDANCE WITH SECTION 9.50 AND/OR SLOPE PROTECTION IN CONFORMANCE WITH SECTION 2.10 WATER POLLUTION CONTROL (SOIL EROSION) AS STATED IN THE CONTRACT DOCUMENTS.
8. LIMIT OF WORK MAY EXCEED THE LIMIT OF GRADING FOR TOPSOIL AND TURF ESTABLISHMENT.
9. REFER TO SECTION 1.08 "PROSECUTION AND PROGRESS" FOR LIMITATION OF OPERATIONS AND SPECIAL CONDITIONS ON CONTRACTOR'S WORK.
10. ALL BASELINE OFFSETS SHALL BE APPLIED AT THE CENTER OF THE STRUCTURE FOR TYPE C-L CATCH BASINS AND MANHOLES. ALL BASELINE OFFSETS FOR TYPE C CATCH BASINS SHALL BE APPLIED AT THE CURB LINE. THE CONTRACTOR SHALL VERIFY THE LOCATION OF THE CATCH BASINS WITH RESPECT TO THE CURB OR BARRIER LINE.
11. IN ACCORDANCE WITH SECTION 1.05.03, A QUALITY MANAGEMENT PLAN WILL BE REQUIRED TO BE SUBMITTED BY THE CONTRACTOR.
12. ALL EXCAVATION AROUND THE PERIMETER OF THE SITE ABOVE ELEVATION 9 SHALL BE CONSIDERED AS UNCLASSIFIED EXCAVATION.

UTILITIES

1. THE CONTRACTOR SHALL NOTIFY THE LANDSCAPE ARCHITECT OF ANY CONFLICTS BETWEEN UTILITIES AND PROPOSED TREE.
2. THE APPROXIMATE LOCATION OF UNDERGROUND UTILITIES ARE SHOWN ON THE PLANS AND ARE NOT GUARANTEED TO BE CORRECT OR COMPLETE. AT THE DIRECTION OF THE ENGINEER, THE CONTRACTOR SHALL VERIFY THE LOCATION OF UTILITIES WHICH MAY CONFLICT WITH THE WORK BY DIGGING TEST PITS BEFORE COMMENCING WORK. THIS WORK SHALL BE PAID FOR UNDER THE ITEM "TEST PIT".
3. THE CONTRACTOR SHALL MAINTAIN AND PROTECT EXISTING & PROPOSED UTILITIES THROUGHOUT THE DURATION OF THE PROJECT.
4. CONTRACTOR SHALL CONTACT "CALL BEFORE YOU DIG" AT 800-922-4455 AT LEAST 72 HOURS PRIOR TO CONDUCTING WORK.
5. ALL REQUIRED UTILITY RELOCATIONS SHALL BE PERFORMED BY THE RESPECTIVE UTILITY COMPANIES. THE CONTRACTOR SHALL CONTACT THE UTILITY COMPANIES PRIOR TO ANY WORK AND COORDINATE HIS WORK AND PROJECT SCHEDULE WITH THE UTILITY COMPANY WORK. UTILITY COORDINATION MEETINGS SHALL BE SCHEDULED BY THE ENGINEER AS NEEDED. ALL COORDINATION, INCLUDING MEETINGS, SHALL BE PERFORMED IN ACCORDANCE WITH FORM 818, SECTION 1.05.06. THE COST OF ALL COOPERATION WITH UTILITIES, INCLUDING COORDINATION AND MEETINGS, IS INCLUDED IN THE OVERALL COST OF THE PROJECT AND NO ADDITIONAL PAYMENTS WILL BE MADE TO THE CONTRACTOR.

GENERAL PHASING OF SWALES AND EROSION CONTROL MEASURES

1. EXTREME CAUTION MUST BE TAKEN TO LIMIT THE EXTENT OF DISTURBED AREAS. WORK SHALL BE CONDUCTED BY THE CONTRACTOR IN THE FOLLOWING ORDER.

A. INSTALL ANTI-TRACKING PADS AS DIRECTED BY THE ENGINEER.

B. INSTALL SEDIMENTATION CONTROL SYSTEM AT ALL CATCH BASINS AND DRAINS, EACH STOCKPILE AND STORAGE AREA AND IN OTHER AREAS AS INDICATED ON THE PLANS OR AS DIRECTED BY THE ENGINEER.

C. INSTALL MID-SLOPE PROTECTION AS DIRECTED BY THE ENGINEER.

PERMITTING REQUIREMENTS

1. THE CONTRACTOR SHALL BE RESPONSIBLE FOR COMPLIANCE WITH THE EROSION CONTROL PLAN AND ANY ADDITIONAL REQUIREMENTS (INCLUDING INSPECTION AND CERTIFICATION) IMPOSED BY THE U.S. EPA NPDES PERMIT AND ANY OTHER LOCAL, STATE OR FEDERAL REGULATIONS INCLUDING STATE OF CONNECTICUT DEPARTMENT OF ENVIRONMENTAL PROTECTION GENERAL PERMIT DEP-PED-GP-015, "GENERAL PERMIT FOR THE DISCHARGE OF STORMWATER AND DEWATERING WASTEWATER ASSOCIATED WITH CONSTRUCTION ACTIVITIES".
2. IF ADDITIONAL EROSION CONTROL MEASURES ARE REQUIRED DURING OR AFTER CONSTRUCTION, AS DETERMINED BY THE ENGINEER, OR OTHER AUTHORITIES, THE CONTRACTOR SHALL TAKE SUCH ADDITIONAL MEASURES AS THEY MAY DIRECT. THIS WORK SHALL BE PAID FOR UNDER THE APPLICABLE ITEMS.

FLOOD CONTINGENCY

1. THE CONTRACTOR IS HEREBY NOTIFIED THAT THE PROJECT AREA IS WITHIN THE 100 YR AND 500 YR FLOOD ZONE AND IS SUBJECT TO URBAN FLOODING.
2. THE CONTRACTOR IS BOUND BY THE CONDITIONS SET FORTH IN THE CONNECTICUT DEPARTMENT OF TRANSPORTATION "STANDARD SPECIFICATIONS FOR ROADS, BRIDGES, FACILITIES AND INCIDENTAL CONSTRUCTION", FORM 818, 2020, WITH THE JANUARY 2023 SUPPLEMENTAL SPECIFICATIONS. SPECIFICALLY, SECTION 1.10 - ENVIRONMENTAL COMPLIANCE, ADDRESSES THE NEED FOR THE CONTRACTOR TO MAINTAIN A STABLE WORK AREA AND TO COORDINATE WITH THE NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION (NOAA) WEATHER SERVICE FOR INFORMATION PERTAINING TO STORMS. THESE PROVISIONS ARE FULLY DESCRIBED UNDER ITEMS 9 AND 10 OF THE "REQUIRED BEST MANAGEMENT PRACTICES".

DEMOLITION

1. ALL EROSION AND SEDIMENTATION CONTROL SYSTEMS ARE TO BE IN PLACE PRIOR TO THE START OF ANY DEMOLITION WORK.
2. ABANDONMENT OF UTILITIES AS SHOWN IN THESE PLANS IS TO BE INCLUDED IN THE GENERAL COST OF THE WORK. NO SEPARATE PAYMENT WILL BE MADE.
3. ABANDONED MANHOLES AND CATCH BASINS SHALL BE REMOVED TO A DEPTH 2 FEET BELOW THE SUBGRADE. THE FLOOR OF THE STRUCTURE SHALL BE BROKEN AND ALL PIPES SHALL BE PLUGGED WITH CEMENT MASONRY. ALL ABANDONED PIPES SHALL BE PLUGGED AND FILLED WITH CONCRETE LOW STRENGTH MATERIAL, AND IN ACCORDANCE WITH THE SPECIAL PROVISION.
4. THE CONTRACTOR SHALL MEET WITH THE ENGINEER AND THE CITY OF BRIDGEPORT BEFORE REMOVING ANY TREES TO DETERMINE WHICH TREES ARE TO REMAIN AND SHALL BE RESPONSIBLE FOR THE PROTECTION OF ALL EXISTING TREES NOT DESIGNATED FOR REMOVAL IN ACCORDANCE WITH CITY OF BRIDGEPORT REQUIREMENTS. REMOVAL OF EXISTING TREES SHALL BE PAID FOR UNDER ITEM NO. 0201001A CLEARING AND GRUBBING.

SUGGESTED SE UENCE OF CONSTRUCTION PHASE 2B

1. Complete construction o terminal s ell.
2. Complete Pump Station 2 installation and remo e s eeting.
3. Remo e and stockpile sur ace material.
4. Fill site to ottom o ase course.
5. Install drainage and utilities in P ase 2D.
6. Install su ase and ase material.
7. Place pa ement ase course.
8. Place top course o pa ement in entire parking ield.

NOTES:
1. EROSION CONTROL MATTING SHALL CONFORM TO THE RE UIREMENTS OF CLASS I SLOPE PROTECTION, TYPE D MATTING AS LISTED IN THE UALIFIED PRODUCTS LIST PROMULGATED BY THE CONNECTICUT DEPARTMENT OF TRANSPORTATION.

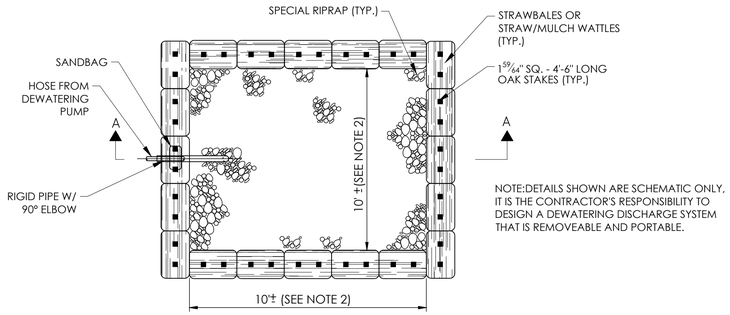
SUGGESTED WATER-HANDLING-COFFERDAM DETAIL - SANDBAGS

NOT TO SCALE



PLAN

NOT TO SCALE

UNCONFINED IN-STREAM WORK BMP:

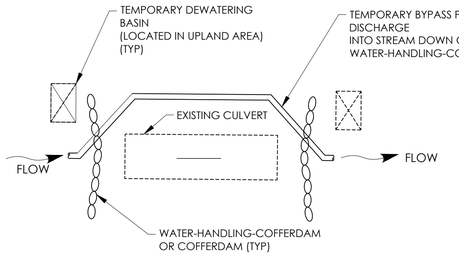
CONFINEMENT OF A WORK AREA BY COFFERDAM TECHNIQUES USING SANDBAG PLACEMENT, SHEET PILE INSTALLATION (VIBRATORY METHOD ONLY), PORTADAM, OR SIMILAR CONFINEMENT DEVICES IS ALLOWED ANY TIME OF THE YEAR. THE REMOVAL OF SUCH CONFINEMENT DEVICES IS ALLOWED ANY TIME OF THE YEAR.

ONCE A WORK AREA HAS BEEN CONFINED, IN-WATER WORK WITHIN THE CONFINED AREA IS ALLOWED ANY TIME OF THE YEAR.

THE CONFINEMENT TECHNIQUE USED SHALL COMPLETELY ISOLATE AND PROTECT THE CONFINED AREA FROM ALL FLOWING WATER. THE USE OF SILT BOOM/CURTAIN OR SIMILAR TECHNIQUE AS A MEANS FOR CONFINEMENT IS PROHIBITED.

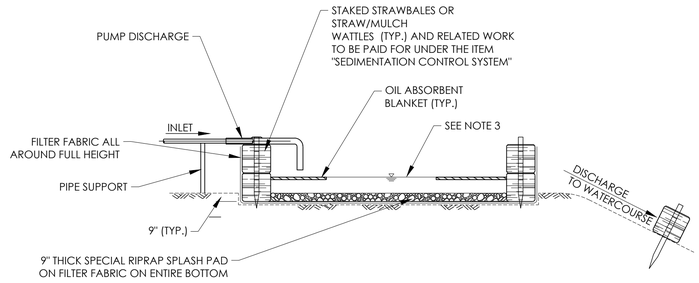
THE ENGINEER WILL REVIEW AND MAY APPROVE THE METHODS OF UNCONFINED IN-WATER WORK WITH CONSIDERATION OF THE FOLLOWING:

- PROPOSED SCHEDULE FOR WORKING OPERATIONS
- ALL UNCONFINED IN-WATER WORK SHALL BE MINOR IN NATURE
- DISTURBANCE SHALL BE LIMITED TO AREAS THAT HAVE BEEN APPROVED FOR TEMPORARY AND PERMANENT IMPACT
- BEST MANAGEMENT PRACTICES SHALL BE UTILIZED WHEREVER POSSIBLE TO MINIMIZE TURBIDITY/SEDIMENT TRANSPORT DOWNSTREAM
- DISTURBED AREAS AND THE DURATION OF DISTURBANCE SHALL BE MINIMIZED TO THE EXTENT POSSIBLE
- IN-STREAM WORK SHALL BE DONE DURING PERIODS OF LOW FLOW



TEMPORARY PUMPING

NOT TO SCALE



SECTION A-A

TEMPORARY SEDIMENT BASIN FOR DEWATERING DISCHARGE

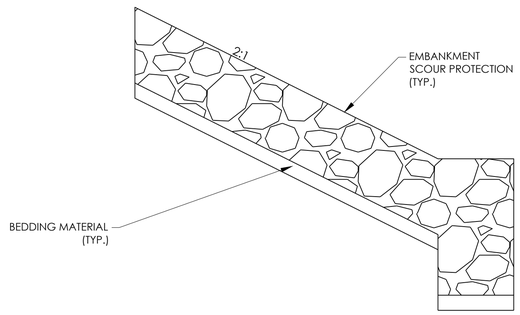
NOT TO SCALE

WATER HANDLING NOTES:

1. THE CONTRACTOR SHALL MAINTAIN WATER THROUGH THE TEMPORARY WATER-HANDLING SYSTEM AS REQUIRED DURING THE CONSTRUCTION OF THE NEW STRUCTURE.
2. EQUIPMENT SHALL NOT BE PERMITTED IN THE WATERCOURSE WHEN TEMPORARY WATER-HANDLING SYSTEM IS NOT IN PLACE WITHOUT APPROVAL FROM THE ENGINEER.
3. DEWATERING BASIN SHALL BE ESTABLISHED OUTSIDE OF THE WETLAND LIMITS. THE EXACT POSITION MAY VARY BASED ON THE PUMPING DESIGN SUBMISSION APPROVED BY THE ENGINEER.
4. WATER-HANDLING MEASURES SHALL NOT EXCEED IMPACT AREAS SHOWN ON THE WETLAND/WATERCOURSE IMPACT PLAN OF THE PERMIT PLANS.

BASIN NOTES:

1. CONTRACTOR TO BRACE STRAWBALES OR STRAW/MULCH WATTLES AS REQUIRED FOR STABILITY.
2. DIMENSIONS TO VARY DEPENDENT UPON DE-WATERING RATE.
3. VOLUME OF BASIN IS EQUAL TO THE MAXIMUM VOLUME OF WATER CAPABLE OF BEING PUMPED.
4. SPECIAL RIPRAP STONE SHALL CONFORM TO NO. 3 STONE AS SHOWN IN SECTION M.01.01 OF CONNDOT FORM 819.
5. AT THE COMPLETION OF THE WORK, THE BASIN AND ALL RELATED MATERIALS SHALL BE REMOVED FROM THE SITE, AND THE AREA SHALL BE RETURNED TO ITS ORIGINAL CONDITION BY THE CONTRACTOR AS DIRECTED BY THE ENGINEER. THE COST OF THIS WORK WILL BE INCLUDED UNDER EACH ITEM, EXCEPT THE CLEAN-UP WHICH WILL NOT BE MEASURED FOR PAYMENT BUT INCLUDED IN THE GENERAL COST OF THE WORK.
6. THE TEMPORARY SEDIMENT BASIN SHALL BE DESIGNED IN ACCORDANCE WITH CONNECTICUT GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL.



PUMP STATION EMBANKMENT PROTECTION

GENERAL NOTES:

1. CONTRACTOR MUST SURVEY AS-BUILT CONDITIONS PRIOR TO COMMENCING PBB AND FIXED WALKWAY MANUFACTURING. THESE CONDITIONS MAY INCLUDE, BUT NOT LIMITED TO, PBB AND FIXED WALKWAY FOUNDATIONS, APRON ELEVATIONS, AND TERMINAL FINISHED FLOOR ELEVATIONS..
2. CONTRACTOR IS RESPONSIBLE TO VERIFY THE PROPOSED PBB MODEL CAN ACCOMMODATE THE AIRCRAFT FLEET MIX AS SPECIFIED ON SHEET C2.63.
3. AIRCRAFT MIX SHOWN BASED ON INFORMATION FROM THE FAA APPROVED EA AND PROVIDED BY HVN AND IS SUBJECT TO CONFIRMATION BY THE CONTRACTOR PRIOR TO MANUFACTURING OF BOARDING BRIDGES AND MARKING OF GATES.
4. MAXIMUM PBB SLOPE FOR ALL AIRCRAFT IS E□UAL TO OR LESS THAN 8.33□ (INCLUDING MISPARKING) UNLESS OTHERWISE NOTED.
5. ALL AIRCRAFT HAVE BEEN MODELED WITH THE PBB DOCKED TO THE L1 DOOR ONLY AND DOCKED 3 INCHES BELOW AIRCRAFT DOOR SILL.
6. AIRCRAFT PARKING LAYOUT BASED ON XXXXXXXX DATED ON XX/XX/XXXX.

SCALE: NTS

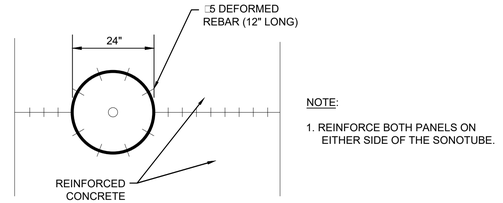
6 C7.22 DETAIL F - HOT POUR JOINT
SCALE: NTS

TABLE 1: DIMENSIONS AND SPACING OF STEEL DOWELS			
SLAB THICKNESS (T)	DIAMETER	LENGTH	SPACING
15	1 1/4"	20"	15"

JOINT DETAIL NOTES:

1. JOINTS MUST NOT INTERSECT THE EDGE OF THE PAVEMENT NOR ANY OTHER JOINT AT AN ANGLE OF LESS THAN 90°.
2. DOWEL BASKETS MUST BE FIRMLY ATTACHED TO THE EXISTING UNDERLYING COURSE PRIOR TO PLACING P.C.C.
3. PAVEMENT AREAS WHERE THICKENED EDGE JOINTS OCCUR MUST BE CONSTRUCTED SO THAT DOWEL BARS ARE PLACED PARALLEL TO THE FINAL SURFACE AND MAINTAIN A MINIMUM DEPTH OF 10" (1.25T/2) FOR 15" PCC, AND 6.25" (1.25T/2) FOR 10.5" PCC - FROM THE FINAL SURFACE.
4. ANY PAVEMENT SHOWN WITH THICKENED EDGE JOINTS WILL BE PAID FOR AS NOMINAL THICKNESS (T) PAVEMENT.
5. DOWEL DRILLING METHOD MUST BE CAPABLE OF MAINTAINING DRILL HOLES PARALLEL TO THE CONCRETE SURFACE AND NORMAL TO THE JOINT LINE WITHIN 1/4"± AT THE END OF THE DOWEL. DRILL HOLES MUST BE ACCURATELY LAID OUT SO THAT THE MAXIMUM DEVIATION DOES NOT EXCEED 1" IN THE HORI□ONTAL DIRECTION AND 1/2" IN THE VERTICAL DIRECTION. DRILL HOLE DIAMETER TO BE APPROXIMATELY 1-3/4" FOR 1-1/4" DOWELS. BAR POSITIONING MUST BE WITHIN A 1/4" TOLERANCE IN HORI□ONTAL AND VERTICAL PLANES.
6. SEALANT DIMENSION H IS BASED ON MANUFACTURE RECOMMENDATIONS.
7. RECOMMEND CONCRETE FACES FOR ALL JOINTS TO BE CONSTRUCTED VERTICAL.
8. THE DOWEL BAR OR TIE BAR SPACING MUST BE STARTED FROM THE INSIDE OF THE JOINT AT 13 INCH TO 15 INCH (12 INCH MIN.) SPACING FROM THE JOINT EDGE. IF THE SPACING DOES NOT ALLOW FOR A 15 INCH SPACING AT THE CENTER OF THE SLAB AND AND THE REMAINING OPENING IS GREATER THAN 15 INCHES THEN A BAR MUST BE PLACED IN THE CENTER OF THE REMAINING SPACE. IF THE REMAINING SPACE IS LESS THAN 15 INCHES, NO ADDITIONAL BAR MUST BE RE□UIRED.
9. FOR TYPES "A" AND "B", THICKENED EDGE SLABS, THE HOT MIX ASPHALT BASE LEVELING COURSES MUST BE CONSTRUCTED TO FULL DEPTHS. COST FOR MODIFYING THESE COURSES MUST BE CONSIDERED INCIDENTAL TO ITEM P-501.



NOTE:
1. REINFORCE BOTH PANELS ON EITHER SIDE OF THE SONOTUBE.

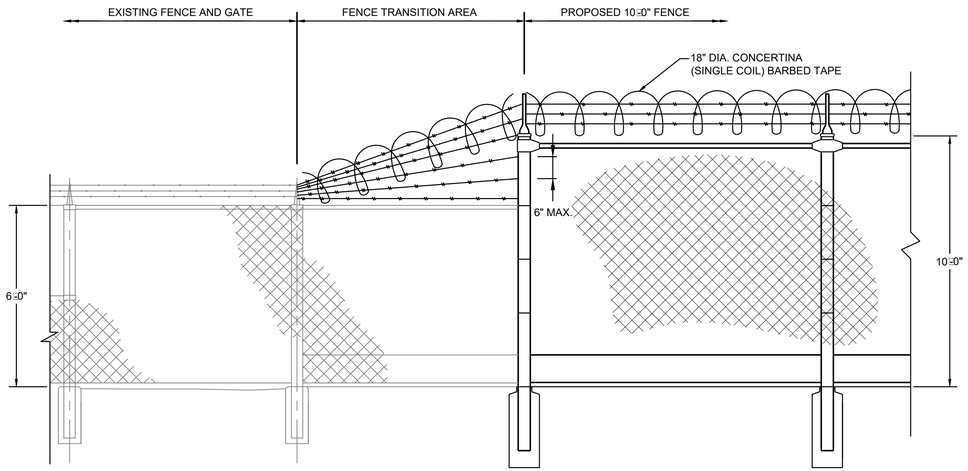
ARHELEVPLOTSHEETS\240248006\9-C7-31_C7.31.dwg

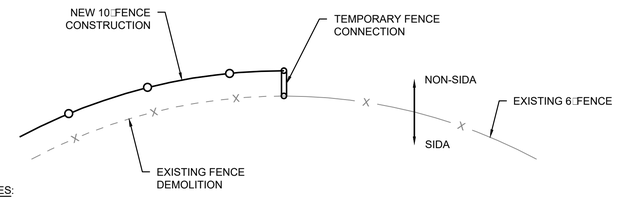
SHEET CONTENT HAS NOT CHANGED SINCE 05/24/2024. SHEET REPRINTED WITH REVISED BORDER.



NOTE:

1. THIS DETAIL IS RE□UIRED PRIMARILY AT LOCATIONS WHERE THE PROPOSED FENCE TIES TO AN EXISTING FENCE THAT IS SHORTER IN HEIGHT BUT IS RELEVANT AT ANY CONNECTION POINT WITH A HEIGHT DISCREPANCY.

1 / C7.32 — EXISTING FENCE TO NEW FENCE TRANSITION ELEVATION
SCALE: NTS



NOTES:

1. THE INFORMATION SHOWN IN THE FENCE LAYOUT PLANS REFLECTS THE LOCATION OF THE EXISTING, 6□TALL FENCE. DUE TO PHASING AND SECURITY RE□UIREMENTS, CONSTRUCTION OF THE PROPOSED FENCE WILL RE□UIRE COORDINATION IN A MANNER THAT ELIMINATES EXPOSURE OF THE EXISTING SIDA/AOA PERIMETER FOR EXTENDED PERIODS OF TIME AND WILL NEVER OCCUR WHEN THE CONTRACTOR IS NOT ON-SITE.
2. THE CONTRACTOR WILL BE RE□UIRED TO SUBMIT A DETAILED FENCE PHASING PLAN, AS IT RELATES TO DAILY SITE CONDITIONS AND PREPARING THE SITE TO LEAVE FOR THE NIGHT. THIS DETAIL REFLECTS A GENERAL PHASING OF THE WORK, AS IT RELATES TO INSTALLATION OF THE NEW FENCE FABRIC.
3. SHOULD THE CONTRACTOR DESIRE TO CONSTRUCT THE NEW FENCE IN CONJUNCTION WITH THE DEMOLITION OF THE EXISTING FENCE, APPLICATION OF THIS TRANSITION DETAIL IS RE□UIRED.
4. THE TEMPORARY FENCE CONNECTION BETWEEN THE EXISTING AND PROPOSED FENCES WILL BE SUBMITTED AS A SHOP DRAWING TO THE ENGINEER FOR REVIEW AND APPROVAL BY HVN AND TSA. THE TEMPORARY CONNECTION WILL CONSIST OF, AT A MINIMUM, 6□FABRIC AND MAY NOT SPAN MORE THAN FIVE FEET (5□) IN LENGTH. THE TEMPORARY CONNECTION WILL BE PROVIDED BETWEEN LINE POSTS AND THE FABRIC WILL BE SECURED ON EACH END WITH STANDARD HOG RINGS, PER THE PROJECT MANUAL.
5. GIVEN THE EXISTING TOPOGRAPHY OF THE AIRFIELD, THE PROPOSED FENCE MAY BE CONSTRUCTED WITHIN THE EXISTING AOA WITH PRIOR APPROVAL AND COORDINATION. THE PROPOSED FENCE LOCATION MUST NOT DEVIATE SIGNIFICANTLY FROM THE EXISTING FENCE LOCATION AND MUST REMAIN FREE FROM EXISTING ROADWAY RIGHTS OF WAY, ROADWAY CLEAR□ONES, RUNWAY/TAXIWAY OBJECT FREE AREAS, AND OTHER AIRFIELD INFRASTRUCTURE. CONTRACTOR IS TO COORDINATE PROPOSED FENCE DEVIATIONS WITH HVN FOR APPROVAL.
6. THE CONTRACTOR MUST MAINTAIN SECURITY DURING THE REMOVAL AND REPLACEMENT OF THE SECURITY FENCING BY PREVENTING ACCESS TO ANIMALS AND UNAUTHORI□ED PERSONNEL. DURING DAYTIME WORK, THE CONTRACTOR IS RE□UIRED TO PROVIDE PROPERLY TRAINED, BADGED PERSONNEL TO MONITOR THE LIMITS OF DOWNED FENCE TO ENSURE AIRPORT SAFETY STANDARDS ARE MAINTAINED. ANY FENCE LINE LEFT DOWNED/DEMOLISHED BETWEEN WORK SHIFTS (OVERNIGHT) WILL RE□UIRE FULL-TIME SITE LIGHTING AND A PROPERLY TRAINED, BADGED PERSONNEL TO MONITOR THE OPEN FENCE AND BE STATIONED EVERY 100 LINEAR FEET OF DOWNED FENCE. THE CONTRACTOR WILL BEAR THE COSTS ASSOCIATED WITH THIS FULL-TIME FENCE MONITORING.

10 C7.34 BLAST FENCE FOUNDATION DETAIL
SCALE: NTS

BLAST FENCE NOTES:

1. BLAST FENCE SHALL WITHSTAND TAXI/BREAKAWAY EXHAUST VELOCITIES OF COMMERCIAL AND MILITARY AIRCRAFT. DESIGN LOADS ARE:
   - 140 MPH JET BLAST PER FAA GUIDELINES — 50.2 PSF (NOM.)
   - 121 MPH (ULT.) WIND PER ASCE 7-16 — 73.2 PSF (ULT.) = 43.9 PSF (NOM.)
2. NO AIRCRAFT SHALL BE OPERATED WITH ENGINE NOZZLE CLOSER THAN 60' AND NO TAIL CLOSER THAN 35' TO THE LEADING EDGE OF THE BLAST FENCE.
3. THE BLAST FENCE HAS A NOMINAL HEIGHT OF 14'.
4. POST ASSEMBLIES SHALL BE FABRICATED FROM ASTM A992 STEEL (SECTION) AND ASTM A572 GRADE 50 STEEL (BASE PLATE). THE ENTIRE ASSEMBLY SHALL BE HOT-DIP GALVANIZED TO 2 OZ/FT² PER ASTM A123.
5. DEFLECTING SURFACES SHALL BE CORRUGATED STEEL SHEETS DESIGNED TO SUPPORT LOADS IN A TWO-SPAN CONDITION. SHEET THICKNESS SHALL BE 16 GA WITH A MINIMUM 2.10 OZ/FT² (G210) HOT-DIP GALVANIZED FINISH PER ASTM A653. SHEET SECTION MODULUS SHALL BE A MINIMUM OF 0.196 IN³/FT.
6. ALL FIELD CONNECTIONS SHALL BE BOLTED (NO FIELD WELDING PERMITTED). FASTENERS SHALL BE SAE J429 GRADE 5, ASTM A449, OR ASTM F593 (ALLOY GROUP 2) WITH AN APPROPRIATE COATING FOR CORROSION RESISTANCE (WHERE APPLICABLE). ADEQUATE LOCKING PROPERTIES SHALL BE PROVIDED TO PREVENT FASTENERS FROM WORKING LOOSE DURING NORMAL OPERATION (SUBJECT TO MANUFACTURER MAINTENANCE GUIDELINES).
7. ALL ANCHORAGE SHALL BE SUPPLIED BY THE BLAST FENCE MANUFACTURER AND SHALL BE CAST-IN-PLACE BY THE GENERAL CONTRACTOR DURING FOUNDATION CONSTRUCTION.
8. NON-SHRINK CEMENTITIOUS OR EPOXY GROUT SHALL BE SUPPLIED BY THE GENERAL CONTRACTOR.
9. BLAST FENCE MANUFACTURER ONSITE SUPERVISION IS REQUIRED DURING INSTALLATION FOR PRODUCT GUARANTEE.
10. ELECTRICAL, LIGHTING, SECURITY ATTACHMENTS, ETC. (IF REQUIRED) SHALL BE BY OTHERS.

FOUNDATION NOTES:

11. FOUNDATION DESIGN SHOWN IS SUGGESTED ONLY. FINAL FOUNDATION/SUBGRADE DESIGN AND APPROVALS ARE BY OTHERS AND SHALL BE BASED ON SERVICE ANCHOR LOADS SHOWN, SITE SOIL CONDITIONS, AND GOVERNING CODES. DESIGN SHOWN CONSIDERS JET EXHAUST CHARACTERISTICS AND INCORPORATES LOAD REDUCTIONS AT FRAMES ADJACENT TO THE ENGINE CENTERLINES. THIS SUGGESTED DESIGN IS BASED ON THE FOLLOWING ASSUMPTIONS:
    - ALLOWABLE SOIL BEARING CAPACITY — 2000 PSF
    - SOIL LATERAL (PASSIVE) PRESSURE — 250 PSF/FT DEPTH
    - STATIC FRICTION COEFFICIENT — 0.40
12. PROJECT DESIGNER SHALL VERIFY FOUNDATION SUITABILITY AND DESIGN BASED ON SITE CONDITIONS AND DETAILS.
13. GENERAL CONTRACTOR SHALL VERIFY CORRECT LOCATION AND ELEVATION OF FOUNDATION.
14. BLAST FENCE MANUFACTURER SHALL FURNISH ALL ANCHORAGE (TO INCLUDE THREADED ROD, FLAT WASHERS, AND HEX NUTS) PRIOR TO FOUNDATION CONSTRUCTION.
15. GENERAL CONTRACTOR SHALL BE RESPONSIBLE FOR THE PLACEMENT OF EMBEDDED ANCHORAGE DURING FOUNDATION CONSTRUCTION. FINISHED FOUNDATION SURFACE SHALL BE A SINGLE PLANE AND MAY SLOPE UP TO 2% IN ANY SINGLE DIRECTION TO ACCOMMODATE DRAINAGE OR TO MATCH EXISTING GRADES. THE FOLLOWING TOLERANCES SHALL APPLY:
    - FINISHED FOUNDATION ELEVATIONS — ±1/4"
    - ANCHORAGE PLUMBNESS (OVER PROJ. HEIGHT) — ±1/16"
    - ANCHORAGE LAYOUT (NON-CUMULATIVE) — ±1/16" O.C.
    - FOUNDATION DIMENSIONS — ±1/2"
16. PORTLAND CEMENT CONCRETE SHALL DEVELOP A MINIMUM COMPRESSIVE STRENGTH OF 4500 PSI IN 28 DAYS (SUBJECT TO CHANGE BASED ON LOCAL REQUIREMENTS).
17. CONSTRUCTION AND CONTRACTION JOINTS SHALL BE PLACED 18' O.C. (MAX.) OR PER APPROVED DESIGN, BUT NOT WITHIN 12" OF ANY BLAST FENCE ANCHOR LOCATION.
18. FOUNDATION CONSTRUCTION, CIVIL WORKS, GROUNDING, AND ELECTRICAL (IF REQUIRED) ARE BY OTHERS.
19. APPROVED BLAST FENCE MANUFACTURER:

PLAN

HALF REDUCER SECTION (TYP.)

GENERAL NOTES:

1. WELDED WIRE FABRIC WITH AN AREA EQUAL TO OR GREATER THAN THE REINFORCING SHOWN MAY BE SUBSTITUTED AS APPROVED BY THE ENGINEER.
2. ALL REINFORCEMENT MUST HAVE A MINIMUM CLEAR COVER OF 2 INCHES, EXCEPT FOR BENEATH BOTTOM REINFORCEMENT IN TOP SLABS, WHERE THE MINIMUM MAY BE 1 1/2 INCHES.
3. WALL THICKNESS OF ALL CATCH BASINS OVER 10 FEET DEEP SHALL BE INCREASED TO 12 INCHES. INSIDE DIMENSIONS SHALL REMAIN THE SAME. THE 12 INCH THICKNESS MUST START AFTER THE FIRST 10 FEET.
4. BASES AND RISERS AT A DEPTH OF 20 FEET AND GREATER MUST BE DESIGNED BY THE CONTRACTOR AND WORKING DRAWINGS MUST BE SUBMITTED TO THE ENGINEER FOR REVIEW.
5. RISERS MAY BE PREFABRICATED WITH PIPE OPENINGS IN ALL FOUR WALLS. ADEQUATE REINFORCING AROUND PIPE OPENINGS MUST BE PROVIDED. RISERS USED WHERE A PIPE OPENING IS TO REMAIN IN PLACE MUST BE FORMED UP WITH BRICK AS DIRECTED BY THE ENGINEER.
6. RISERS MUST NEVER HAVE CORNER PIPE ENTRIES. ROUND STRUCTURES MUST BE USED WHEN PIPES CANNOT ALIGN WITH A RECTANGULAR STRUCTURE KNOCK OUT.
7. FOR CATCH BASIN TOPS, SEE SHEET NO. HW-586_07 FROM CTDOT STANDARD SHEETS.

CONCRETE FOUNDATION NOTES:

1. CONCRETE FOUNDATION TO BE SUPPLIED AND INSTALLED BY OTHERS.
2. CONCRETE STRENGTH @ 28 DAYS, 5%–8% ENTRAINED AIR, 3"–5" MAX SLUMP.
3. NET ALLOWABLE SOIL PRESSURE AS INDICATED ON SHEET 1.1.
4. SOIL CONDITIONS TO BE VERIFIED ON SITE BY OTHERS.
5. REBAR: ASTM A615 GRADE 60, BLACK BAR.
6. DIMENSION OF FOUNDATION MUST HAVE 1'–0" OVERHANG BEYOND EXTERNAL FACE OF MODULE.
7. DIMENSION OF STORMTRAP SYSTEM ALLOW FOR A 3/4" GAP BETWEEN EACH MODULE.
8. ALL DIMENSIONS TO BE VERIFIED IN THE FIELD BY OTHERS.
9. SEE SHEET 3.0 FOR INSTALLATION SPECIFICATIONS.

CONCRETE FOUNDATION NOTES:

1. CONCRETE FOUNDATION TO BE SUPPLIED AND INSTALLED BY OTHERS.
2. CONCRETE STRENGTH @ 28 DAYS, 5%–8% ENTRAINED AIR, 3"–5" MAX SLUMP.
3. NET ALLOWABLE SOIL PRESSURE AS INDICATED ON SHEET 1.1.
4. SOIL CONDITIONS TO BE VERIFIED ON SITE BY OTHERS.
5. REBAR: ASTM A615 GRADE 60, BLACK BAR.
6. DIMENSION OF FOUNDATION MUST HAVE 1'–0" OVERHANG BEYOND EXTERNAL FACE OF MODULE.
7. DIMENSION OF STORMTRAP SYSTEM ALLOW FOR A 3/4" GAP BETWEEN EACH MODULE.
8. ALL DIMENSIONS TO BE VERIFIED IN THE FIELD BY OTHERS.
9. SEE SHEET 3.0 FOR INSTALLATION SPECIFICATIONS.

STORMTRAP INSTALLATION SPECIFICATION

1. STORMTRAP SHALL BE INSTALLED IN ACCORDANCE WITH ASTM C891 (STANDARD PRACTICE FOR INSTALLATION OF UNDERGROUND PRECAST CONCRETE UTILITY STRUCTURES). THE FOLLOWING ADDITIONS AND/OR EXCEPTIONS ARE PROVIDED FOR EMPHASIS. THE MENTION OF THESE ITEMS DOES NOT PRECLUDE THE INSTALLING CONTRACTOR FROM FOLLOWING ASTM C891 IN ITS ENTIRETY AND IMPLEMENTING ALL APPROPRIATE MEASURES. THE INSTALLING CONTRACTOR OWNS AND IS RESPONSIBLE FOR THE STORMTRAP SYSTEM UPON REMOVAL OF THE MODULES FROM THE DELIVERY TRUCK THROUGH 'FINAL CONSTRUCTION'. FINAL CONSTRUCTION IS ACHIEVED WHEN ALL MODULES ARE SET, FULLY BACKFILLED, AND WHEN FINAL FINISHED GRADES ARE REACHED. THE CONTRACTOR IS RESPONSIBLE FOR ANY COUNTERMEASURES NECESSARY TO RESIST UPLIFT/BUOYANCY BEFORE 'FINAL CONSTRUCTION' IS ACHIEVED.

2. IT IS THE RESPONSIBILITY OF THE INSTALLING CONTRACTOR TO ENSURE THAT PROPER/ADEQUATE EQUIPMENT IS USED TO SET/INSTALL THE MODULES.

3. STORMTRAP MODULES SHALL BE PLACED ON A LEVEL CONCRETE FOUNDATION (SEE SHEET 2.1) WITH A 1'–0" OVERHANG ON ALL SIDES THAT SHALL BE POURED IN PLACE BY INSTALLING CONTRACTOR. A QUALIFIED GEOTECHNICAL ENGINEER WILL BE EMPLOYED, BY OWNER, TO PROVIDE ASSISTANCE IN EVALUATING THE EXISTING SOIL CONDITIONS TO ENSURE THAT THE SOIL BEARING PRESSURE MEETS OR EXCEEDS THE STRUCTURAL DESIGN LOADING CRITERIA AS SPECIFIED ON SHEET 1.1.

4. THE STORMTRAP MODULES SHALL BE PLACED SUCH THAT THE MAXIMUM SPACE BETWEEN ADJACENT MODULES DOES NOT EXCEED ¾" (SEE DETAIL 2). IF THE SPACE EXCEEDS ¾", THE MODULES SHALL BE RESET WITH APPROPRIATE ADJUSTMENT MADE TO LINE AND GRADE TO BRING THE SPACE INTO SPECIFICATION.

5. THE PERIMETER HORIZONTAL JOINT BETWEEN THE STORMTRAP MODULES AND THE CONCRETE FOUNDATION SHALL BE SEALED TO THE FOUNDATION WITH PRE–FORMED MASTIC JOINT SEALER ACCORDING TO ASTM C891, 8.8 AND 8.12 (SEE DETAIL 1). THE MASTIC JOINT TAPE DOES NOT PROVIDE A WATERTIGHT SEAL.

6. ALL EXTERIOR ROOF AND EXTERIOR VERTICAL WALL JOINTS BETWEEN ADJACENT STORMTRAP MODULES SHALL BE SEALED WITH 8" WIDE PRE–FORMED, COLD–APPLIED, SELF–ADHERING ELASTOMERIC RESIN, BONDED TO A WOVEN , HIGHLY PUNCTURE RESISTANT POLYMER WRAP, CONFORMING TO ASTM C891 AND SHALL BE INTEGRATED WITH PRIMER SEALANT AS APPROVED BY STORMTRAP (SEE DETAILS 2, 3, & 4). THE JOINT WRAP DOES NOT PROVIDE A WATERTIGHT SEAL. THE SOLE PURPOSE OF THE JOINT WRAP IS TO PROVIDE A SILT AND SOIL TIGHT SYSTEM. THE ADHESIVE EXTERIOR JOINT WRAP SHALL BE INSTALLED ACCORDING TO THE FOLLOWING INSTALLATION INSTRUCTIONS:

   6.1. USE A BRUSH OR WET CLOTH TO THOROUGHLY CLEAN THE OUTSIDE SURFACE AT THE POINT WHERE JOINT WRAP IS TO BE APPLIED.

   6.2. A RELEASE PAPER PROTECTS THE ADHESIVE SIDE OF THE JOINT WRAP. PLACE THE ADHESIVE TAPE (ADHESIVE SIDE DOWN) AROUND THE STRUCTURE, REMOVING THE RELEASE PAPER AS YOU GO. PRESS THE JOINT WRAP FIRMLY AGAINST THE STORMTRAP MODULE SURFACE WHEN APPLYING.

7. IF THE CONTRACTOR NEEDS TO CANCEL ANY SHIPMENTS, THEY MUST DO SO 48 HOURS PRIOR TO THEIR SCHEDULED ARRIVAL AT THE JOB SITE. IF CANCELED AFTER THAT TIME, PLEASE CONTACT THE PROJECT MANAGER.

8. IF THE STORMTRAP MODULE(S) IS DAMAGED IN ANY WAY PRIOR, DURING, OR AFTER INSTALL, STORMTRAP MUST BE CONTACTED IMMEDIATELY TO ASSESS THE DAMAGE AND DETERMINE WHETHER OR NOT THE MODULE(S) WILL NEED TO BE REPLACED. IF ANY MODULE ARRIVES AT THE JOBSITE DAMAGED DO NOT UNLOAD IT; CONTACT STORMTRAP IMMEDIATELY. ANY DAMAGE NOT REPORTED BEFORE THE TRUCK IS UNLOADED WILL BE THE CONTRACTOR'S RESPONSIBILITY.

9. STORMTRAP MODULES CANNOT BE ALTERED IN ANY WAY AFTER MANUFACTURING WITHOUT WRITTEN CONSENT FROM STORMTRAP.

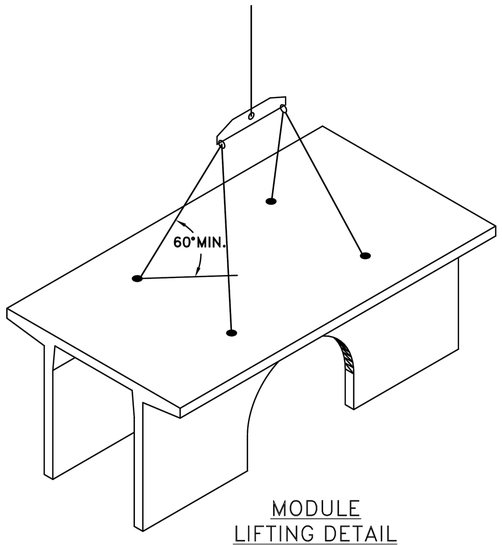
STORMTRAP MODULE LIFTING SPECIFICATION

1. IT IS THE CONTRACTOR'S RESPONSIBILITY TO ENSURE THAT ALL (4) CHAINS/CABLES ARE SECURED PROPERLY TO THE LIFTING ANCHORS AND IN EQUAL TENSION WHEN LIFTING THE STORMTRAP MODULE.
2. MINIMUM 7'-0" CHAIN/CABLE LENGTH TO BE USED TO LIFT STORMTRAP MODULES (SUPPLIED BY CONTRACTOR).
3. CONTRACTOR TO ENSURE MINIMUM LIFTING ANGLE IS 60° FROM TOP SURFACE OF STORMTRAP MODULE. SEE DETAIL.
4. IT IS UNDERSTOOD AND AGREED THAT AT ALL TIMES DURING WHICH HOISTING AND RIGGING EQUIPMENT IS BEING SUPPLIED TO THE PURCHASER, OPERATOR OF SUCH EQUIPMENT SHALL BE IN CHARGE OF HIS ENTIRE EQUIPMENT AND SHALL AT ALL TIMES BE THE JUDGE OF THE SAFETY AND PROPERTY OF ANY SUGGESTION TO HIM FROM THE SELLER, ITS AGENTS OR EMPLOYEES. PURCHASER AGREES TO SAVE, INDEMNIFY AND HOLD HARMLESS SELLER FROM ALL LOSS, CLAIMS, DEMANDS OR CAUSES OF ACTION, WHICH MAY ARISE FROM THE EXISTENCE OR OPERATION OF SAID EQUIPMENT.



MODULE

ZONE CHART		
ZONES	ZONE DESCRIPTIONS	REMARKS
ZONE 1	FOUNDATION AGGREGATE	#5 (¾") STONE ANGULAR AGGREGATE (SEE NOTE 4)
ZONE 2	BACKFILL	UNIFIED SOILS CLASSIFICATION (GW, GP, SW, SP) OR SEE BELOW FOR APPROVED BACKFILL OPTIONS
ZONE 3	FINAL COVER OVERTOP	MATERIALS NOT TO EXCEED 120 PCF

APPROVED ZONE 2 BACKFILL OPTIONS	
OPTION	REMARKS
¾" STONE AGGREGATE	THE STONE AGGREGATE SHALL CONSIST OF CLEAN AND FREE DRAINING ANGULAR MATERIAL. THE SIZE OF THIS MATERIAL SHALL HAVE 100% PASSING THE 1" SIEVE WITH 0% TO 5% PASSING THE #8 SIEVE. THIS MATERIAL SHALL BE SEPARATED FROM NATIVE MATERIAL USING GEOFABRIC AROUND THE PERIMETER OF THE BACKFILL (ASTM SIZE #57) AS DETERMINED BY THE GEOTECHNICAL ENGINEER.
SAND	IMPORTED PURE SAND IS PERMITTED TO BE USED AS BACKFILL IF IT IS CLEAN AND FREE DRAINING. THE SAND USED FOR BACKFILLING SHALL HAVE LESS THAN 40% PASSING #40 SIEVE AND LESS THAN 5% PASSING #200 SIEVE. THIS MATERIAL SHALL BE SEPARATED FROM NATIVE MATERIAL USING GEOFABRIC AROUND THE PERIMETER OF THE SAND BACKFILL.
CRUSHED CONCRETE AGGREGATE	CLEAN, FREE DRAINING CRUSHED CONCRETE AGGREGATE MATERIAL CAN BE USED AS BACKFILL FOR STORMTRAP'S MODULES. THE SIZE OF THIS MATERIAL SHALL HAVE 100% PASSING THE 1" SIEVE WITH 0% TO 5% PASSING THE #8 SIEVE. THIS MATERIAL SHALL BE SEPARATED FROM NATIVE MATERIAL USING GEOFABRIC AROUND THE PERIMETER OF THE BACKFILL.
ROAD PACK	STONE AGGREGATE 100% PASSING THE 1-1/2" SIEVE WITH LESS THAN 12% PASSING THE #200 SIEVE (ASTM SIZE #467). GEOFABRIC AS PER GEOTECHNICAL ENGINEER RECOMMENDATION.

STORMTRAP ZONE INSTALLATION SPECIFICATION/PROCEDURE

1. THE FILL PLACED AROUND THE STORMTRAP MODULES MUST BE DEPOSITED ON BOTH SIDES AT THE SAME TIME AND TO APPROXIMATELY THE SAME ELEVATION. AT NO TIME SHALL THE FILL BEHIND ONE SIDE WALL BE MORE THAN 2'-0" HIGHER THAN THE FILL ON THE OPPOSITE SIDE. BACKFILL SHALL EITHER BE COMPACTED AND/OR VIBRATED TO ENSURE THAT BACKFILL AGGREGATE/STONE MATERIAL IS WELL SEATED AND PROPERLY INTER LOCKED. CARE SHALL BE TAKEN TO PREVENT ANY WEDGING ACTION AGAINST THE STRUCTURE, AND ALL SLOPES WITHIN THE AREA TO BE BACKFILLED MUST BE STEPPED OR SERRATED TO PREVENT WEDGING ACTION. CARE SHALL ALSO BE TAKEN AS NOT TO DISRUPT THE JOINT WRAP FROM THE JOINT DURING THE BACKFILL PROCESS. BACKFILL MUST BE FREE-DRAINING MATERIAL. SEE ZONE 2 BACKFILL CHART ON THIS PAGE FOR APPROVED BACKFILL OPTIONS. IF NATIVE EARTH IS SUSCEPTIBLE TO MIGRATION, CONFIRM WITH GEOTECHNICAL ENGINEER AND PROVIDE PROTECTION AS REQUIRED (PROVIDED BY OTHERS). ALL MODULES MUST BE SET AND ALL SIDES MUST BE FULLY BACKFILLED BEFORE TRAVEL OVERTOP THE SYSTEM IS PERMITTED. SEE NOTE 2 FOR EXCEPTIONS AND LIMITATIONS.
2. THE FILL PLACED OVERTOP THE SYSTEM SHALL BE PLACED IN MINIMUM 6" LIFTS. AT NO TIME SHALL MACHINERY OR VEHICLES GREATER THAN THE DESIGN LIVE LOAD LISTED ON SHEET 1.0 TRAVEL OVERTOP THE SYSTEM. IF TRAVEL OVER THE SYSTEM OCCURS BEFORE THE MINIMUM DESIGN COVER IS ACHIEVED, IT MAY BE NECESSARY TO REDUCE THE ULTIMATE LOAD/BURDEN OF THE OPERATING MACHINERY SO AS TO NOT EXCEED THE DESIGN CAPACITY OF THE SYSTEM. VEHICLES AND MACHINERY USED TO PLACE FILL MATERIAL ON TOP OF THE SYSTEM SHALL TRAVEL PARALLEL TO THE LONGITUDINAL AXIS OF THE STORMTRAP MODULES WHENEVER POSSIBLE.
3. THE VIBRATORY FUNCTION OF ANY ROLLER, COMPACTOR, VEHICLE, ETC. SHALL NOT BE USED OVERTOP THE SYSTEM WITHOUT PRIOR APPROVAL FROM STORMTRAP. IN SOME CASES, HAND COMPACTION MAY BE NECESSARY TO ENSURE THAT THE ALLOWABLE DESIGN LOADING IS NOT EXCEEDED.
4. STONE AGGREGATE FOUNDATION IN ZONE 1 IS RECOMMENDED FOR LEVELING PURPOSES ONLY (OPTIONAL).

ACCESS OPENING SPECIFICATION

1. A TYPICAL ACCESS OPENING FOR THE STORMTRAP SYSTEM ARE 2'–0" IN DIAMETER. ACCESS OPENINGS LARGER THAN 4'–0" IN DIAMETER NEED TO BE APPROVED BY STORMTRAP. ALL OPENINGS MUST RETAIN AT LEAST 2'–0" OF CLEARANCE FROM THE END OF THE STORMTRAP MODULE UNLESS NOTED OTHERWISE. ALL ACCESS OPENINGS TO BE LOCATED ON INSIDE LEG UNLESS OTHERWISE SPECIFIED. SEE SHEET 2.0 FOR SIZES AND LOCATIONS.

2. UNLESS OTHERWISE SPECIFIED, PLASTIC COATED STEEL STEPS PRODUCED BY M.A. INDUSTRIES PART #PS3–PFC OR APPROVED EQUAL (SEE STEP DETAIL) ARE PROVIDED INSIDE ANY MODULE WHERE DEEMED NECESSARY. THE HIGHEST STEP IN THE MODULE IS TO BE PLACED A DISTANCE OF 1'–0" FROM THE INSIDE EDGE OF THE STORMTRAP MODULES. ALL ENSUING STEPS SHALL BE PLACED AT A DISTANCE BETWEEN 10" MIN AND 14" MAX BETWEEN THEM. STEPS MAY BE MOVED OR ALTERED TO AVOID OPENINGS OR OTHER IRREGULARITIES IN THE MODULE.

3. STORMTRAP LIFTING INSERTS MAY BE RELOCATED TO AVOID INTERFERENCE WITH ACCESS OPENINGS OR THE CENTER OF GRAVITY OF THE MODULE AS NEEDED.

4. STORMTRAP ACCESS OPENINGS MAY BE RELOCATED TO AVOID INTERFERENCE WITH INLET AND/OR OUTLET PIPE OPENINGS SO PLACEMENT OF STEPS IS ATTAINABLE.

5. ACCESS OPENINGS SHOULD BE LOCATED IN ORDER TO MEET THE APPROPRIATE MUNICIPAL REQUIREMENTS. STORMTRAP RECOMMENDS AT LEAST TWO ACCESS OPENINGS PER SYSTEM FOR ACCESS AND INSPECTION.

6. USE PRECAST ADJUSTING RINGS AS NEEDED TO MEET GRADE. STORMTRAP RECOMMENDS FOR COVER OVER 2' TO USE PRECAST BARREL OR CONE SECTIONS. (PROVIDED BY OTHERS)

PIPE OPENING SPECIFICATION

1. MINIMUM EDGE DISTANCE FOR AN OPENING ON THE OUTSIDE WALL SHALL BE NO LESS THAN 1'–0".

2. CONNECTING PIPES MAY BE INSTALLED WITH A 1'–0" CONCRETE COLLAR AND AN AGGREGATE CRADLE (AS REQUIRED) FOR AT LEAST ONE PIPE LENGTH (SEE PIPE CONNECTION DETAIL). A STRUCTURAL GRADE CONCRETE OR HIGH STRENGTH, NON–SHRINK GROUT WITH A MINIMUM 28 DAY COMPRESSIVE STRENGTH OF 3000 PSI MAY BE USED.

3. THE ANNULAR SPACE BETWEEN THE PIPE AND THE HOLE SHALL BE FILLED WITH HIGH STRENGTH NON–SHRINK GROUT.

PIPE INSTALLATION INSTRUCTIONS

1. CLEAN AND LIGHTLY LUBRICATE ALL OF THE PIPE TO BE INSERTED INTO STORMTRAP.

2. IF PIPE IS CUT, CARE SHOULD BE TAKEN TO ALLOW NO SHARP EDGES. BEVEL AND LUBRICATE LEAD END OF PIPE.

3. ALIGN CENTER OF PIPE TO CORRECT ELEVATION AND INSERT INTO OPENING.

NOTE: ALL ANCILLARY PRODUCTS/SPECIFICATIONS RECOMMENDED AND SHOWN ON THIS SHEET INCLUDING BUT NOT LIMITED TO CONCRETE COLLARS, AGGREGATE CRADLES, GRADE RINGS, RISER SECTIONS, ETC., ARE RECOMMENDATIONS ONLY AND SUBJECT TO CHANGE PER THE INSTALLING CONTRACTOR AND/OR PER LOCAL MUNICIPAL CODE/REQUIREMENTS.

CULVERT GENERAL NOTES

1. SPECIFICATIONS: WORK UNDER THIS PROJECT SHALL BE PERFORMED IN ACCORDANCE WITH THE PROJECT SPECIFICATIONS.

2. DESIGN SPECIFICATIONS: *AASHTO LRFD BRIDGE DESIGN SPECIFICATIONS* (9TH EDITION -2020), AS SUPPLEMENTED BY THE CONNECTICUT DEPARTMENT OF TRANSPORTATION *BRIDGE AND ROADWAY STRUCTURES DESIGN MANUAL* (2025).

3. MATERIAL STRENGTHS:

   CONCRETE:
   FOOTING CONCRETE.....F□ □3,000 PSI
   HEADWALL AND WINGWALL CONCRETE.....F□ □4,000 PSI
   CULVERT CONCRETE.....F□ □5,000 PSI

   REINFORCEMENT:
   (ASTM A615 GRADE 60).....F□□60,000 PSI

4. LIVE LOAD: HL-93, LEGAL AND PERMIT VEHICLES

5. FUTURE PAVING ALLOWANCE: NONE.

6. DIMENSIONS: WHEN DECIMAL DIMENSIONS ARE GIVEN TO LESS THAN THREE DECIMAL PLACES, THE OMITTED DIGITS SHALL BE ASSUMED TO BE □EROS.

7. EXISTING DIMENSIONS: DIMENSIONS OF THE EXISTING STRUCTURES SHOWN ON THESE PLANS ARE FOR GENERAL REFERENCE ONLY. THEY HAVE BEEN TAKEN FROM THE ORIGINAL DESIGN DRAWINGS AND ARE NOT GUARANTEED. THE CONTRACTOR SHALL TAKE ALL FIELD MEASUREMENTS NECESSARY TO ASSURE PROPER FIT OF THE FINISHED WORK AND SHALL ASSUME FULL RESPONSIBILITY FOR THEIR ACCURACY. WHEN SHOP DRAWINGS BASED ON FIELD MEASUREMENTS ARE SUBMITTED FOR REVIEW, THE FIELD MEASUREMENTS SHALL ALSO BE SUBMITTED FOR REFERENCE BY THE REVIEWER.

8. EXPOSED EDGES: EXPOSED EDGES OF CONCRETE SHALL BE BEVELED 1"X1" UNLESS DIMENSIONED OTHERWISE.

9. CONCRETE COVER: ALL REINFORCEMENT SHALL HAVE TWO INCHES COVER UNLESS DIMENSIONED OTHERWISE.

10. REINFORCEMENT: ALL PROPOSED REINFORCEMENT SHALL BE GALVANI□ED AFTER FABRICATION UNLESS NOTED OTHERWISE. REINFORCEMENT GALVANI□ING SHALL CONFORM TO THE RE□UIREMENTS OF ASTM A767, CLASS 1 INCLUDING SUPPLEMENTAL RE□UIREMENTS.

11. CONSTRUCTION JOINTS: CONSTRUCTION JOINTS, OTHER THAN THOSE SHOWN ON THE PLANS, WILL NOT BE PERMITTED WITHOUT THE PRIOR APPROVAL OF THE ENGINEER.

12. MASH TEST LEVEL: THE PROPOSED PARAPET MEETS THE TL-4 CRITERIA FOR MASH 2016.

CULVERT AND ACCESS ROAD CONSTRUCTION AND GROUND IMPROVEMENT NOTES:

1. DUE TO SOFT COMPRESSIBLE SOIL IN THE SUBSURFACE, TO MITIGATE POST-CONSTRUCTION CONSOLIDATION SETTLEMENT, THE FOLLOWING CONSTRUCTION SE□UENCE IS CURRENTLY PROPOSED.

   A. REMOVE SURFICIAL MARSH SOILS (ESTIMATED TO BE 5□0" THICK).

   B. BUILD THE ACCESS ROADWAY EMBANKMENT WITH TEMPORARY DRAINAGE AT INVERT EL. 3.0 (4 - 36" DIA. RCP OR 5 - 42" DIA. CMP).

   C. UTILI□E ACCESS ROADWAY FOR CONSTRUCTION ACCESS AND ALLOW SETTLEMENT FOR MINIMUM 18 MONTHS. SETTLEMENT SHALL BE MONITORED PERIODICALLY.

   D. AFTER COMPLETION OF SETTLEMENT PERIOD, SUBJECT TO VERIFICATION OF THE SETTLEMENT MONITORING DATA, COMPLETE FINAL GRADING, FINAL CULVERT CONSTRUCTION, AND FINAL ACCESS ROADWAY CONSTRUCTION.

2. IN THE CASE THAT THE CONSTRUCTION SCHEDULE DOES NOT ALLOW FOR THE RE□UIRED SETTLEMENT PERIOD, ONE OF THE FOLLOWING ALTERNATIVE GROUND IMPROVEMENT METHODS SHALL BE PERFORMED.

   A. INSTALL WICK DRAINS ACROSS THE ROADWAY FOOTPRINT TO ACCELERATE CONSOLIDATION SETTLEMENT.

   B. INSTALL RIGID INCLUSIONS SUCH AS TIMBER PILES OR AGGREGATE PIERS THROUGH THE BOTTOM OF THE COMPRESSIBLE SOILS, THEN INSTALL A LOAD TRANSFER PLATFORM OVER THE RIGID INCLUSIONS BEFORE FINISHING ROADWAY SURFACE.

TWEED NEW HAVEN REGIONAL AIRPORT (HVN) RUNWAY EXTENSION AND TERMINAL EXPANSION PROJECT - INLAND WETLANDS/WATERCOURSES AND WQC & TIDAL WETLANDS AND WQC APPLICATION

ATTACHMENT 15 – WETLAND REPORTS

The existing wetlands at the Project Site were delineated and characterized by FHI Studio in 2021 (FHI 2021), McCue Environmental (McCue 2024). Reports are attached.

Subject: Wetland Delineation Report for Tweed New Haven Regional Airport
Runway Extension and Terminal Expansion
New Haven and East Haven, Connecticut

I. INTRODUCTION

This letter presents my findings regarding wetlands investigation at the Tweed New Haven Regional Airport in New Haven and East Haven, Connecticut (Figures 1 & 2). The purpose of this work was to field delineate all wetland edges in those areas being assessed for mitigation, which are the eastern, western and southern portions of the property, and property owned by Town Fair Tire, south of Uriah Street. This report is submitted to Hoyle, Tanner & Associates, Inc. for the proposed new terminal and runway extension project to accommodate existing and growing aircraft operations and passenger volumes.

McCue Environmental, LLC (McCue) conducted the site reconnaissance for wetlands on April 24, April 25, May 2, June 10, June 20, November 1 and 18, 2024. At these times, McCue delineated several areas of wetlands within the subject areas. Web Soil Survey available online at http://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx, the Connecticut DEEP Geographic Information System (CTGIS) data and the National Wetlands Inventory (NWI) mapper (fws.gov/program/national-wetlands-inventory/wetlands-mapper) were consulted as a part of this effort. Figures 2A through 2F show the delineated wetlands at 1" = 300' and 1' = 400'scales, and mapped wetland types.

NWI mapping was used as a baseline by McCue Environmental with field observations editing, where needed. A combination of aerial photograph review and interpretation, and field observations were used in identifying habitat changes where lines were not laid. It should be noted that areas well interior of each delineated wetland were not accessed directly, therefore, smaller areas of differing subtypes may be present.

RELEVANT SITE HSTORY

The emergence of an airport in New Haven began in 1922 when mayor David E. Fitzgerald initiated the purchase of 220 acres of land situated on the New Haven-East Haven municipal boundary in a rural area of the community. In 1929, a ground-breaking ceremony occurred and on September 29, 1931, New Haven Municipal Airport celebrated its opening day. There has been intermittent scheduled commercial air service at HVN as early as 1934 when passenger and

mail flights were operated by American Airlines. The Airport is a non-hub, commercial service primary airport located in the both the City of New Haven and Town of East Haven, New Haven County, Connecticut approximately three miles southeast of the central business district of New Haven. The Airport has one paved asphalt runway: Runway 2-20, which is 5,600 feet long by 150 feet wide. Runway 14-32 is not eligible for federal funding as a crosswind runway and will remain closed permanently. Runway 2-20 has two partial parallel taxiways, one supporting each runway end. The Airport has an Airport Traffic Control Tower (ATCT) that provides guidance to the Airport and the Airport's airspace. HVN occupies approximately 437 acres of and. Presently, airlines operate out of the Airport terminal building. This building, originally constructed as a conventional hangar, was built in 1930 and then converted into the terminal building in 1995.

II. METHODOLOGY

These delineations were done in accordance with the Connecticut Department of Energy and Environmental Protection (DEEP) Inland Wetlands and Watercourses Act (Connecticut General Statutes Sections 22a-36 through 22a-45), and the US Army Corps of Engineers Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region (Version 2), January 2012. A hand Dutch auger was used in observing soil profiles, and data collected included characteristics of soil horizons, soil color using a Munsell soil color chart, and documentation of site features such as topography, hydrology and vegetation types and density.

The wetland functional assessments were performed using the US Army Corps of Engineers Highway Methodology Workbook and associated Wetland Function-Value Evaluation Form.

III. RESULTS

PROJECT AREAS

(please note there is no WF-200 series flagging)

Tweed New Haven Regional Airport North Area Delineations (Figure 2A and P-1)

The identified wetland, represented by flag series WF100 – WF194, is a wooded swamp in the areas of the delineation; there are common reed (*Phragmites australis*, further referred to as *Phragmites*) dominated areas well interior of the flagged wetland edge. Vegetation observed in the delineated wetlands include red maple (*Acer rubrum*), green ash (*Fraxinus pennsylvanica*), highbush blueberry (*Vaccinium corymbosum*), sweet pepperbush (*Clethra alnifolia*), multiflora rose, royal fern (*Osmunda regalis*), cinnamon fern (*Osmundastrum cinnamomeum*), skunk cabbage (*Symplocarpus foetidus*), sphagnum moss (*Sphagnum* sp.) and common greenbrier (*Smilax rotundifolia*).

The area of upland is forest habitat. Vegetation observed includes red maple, Norway maple (*Acer platanoides*), red oak (*Quercus rubra*), black cherry (*Prunus serotina*), sassafras trees and saplings (*Sassafras albidum*), Russian olive (*Elaeagnus angustifolia*), multiflora rose, privet (*Ligustrum vulgare*), eastern burning bush (*Euonymus atropurpureus*), Japanese honeysuckle

(*Lonicera japonica*), Canada mayflower (*Maianthemum canadense*), poison ivy (*Toxicodendron radicans*), garlic mustard (*Alliaria petiolate*) and Asiatic bittersweet (*Celastrus orbiculatus*).

The NWI mapper classifies the swamp as PFO1E: Palustrine (P), Forested (FO), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E). As noted, there are areas of *Phragmites* dominated marsh habitat well interior of the wetland, which are mapped as PEM1/5F: Palustrine (P), Emergent persistent (EM1), Phragmites australis (5), Semi permanently Flooded (F). These map classifications would be consistent with the McCue site investigations, however, based on the detailed delineation, the PFO1E extent is broader than what is shown on the NWI Mapper as it coincides with the actual field delineation.

Tweed New Haven Regional Airport Central Area Delineations (Figure 2B and P-2)

North of Pig Farm Road

The identified wetland north of Pig Farm Road is represented by flag series WF300 – WF384. This wetland consists of several classifications, including a very dense *Phragmites* community. The delineated edge is mostly adjacent to areas of prior disturbances, including a former storage ground and Pig Farm Road. Vegetation observed in the delineated wetland includes red maple (*Acer rubrum*), black gum (*Nyssa sylvatica*), white birch (*Betula papyrifera*), arrowwood (*Viburnum dentatum*), pussy willow (*Salix discolor*), swamp azalea (*Rhododendron viscosum*), multiflora rose, *Phragmites*, common greenbrier and fox grape (*Vitis labrusca*).

As noted, the area of upland generally consists of disturbed areas associated with former and current airport operations. Vegetation in the upland areas include big-tooth aspen (*Populus grandidentata*), black locust (*Robinia pseudoacacia*), privet, multiflora rose, glossy buckthorn (*Frangula alnus*), staghorn sumac (*Rhus typhina*), poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier and garlic mustard.

The NWI mapper classifies the portion of the wetland along flags WF300 to Pig Farm Road as PSS1E: Palustrine (P), Scrub-Shrub (SS), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E). The common reed dominated area of the wetland north of Pig Farm Road is classified as PEM1/5F: Palustrine (P), Emergent persistent (EM1), Phragmites australis (5), Semi permanently Flooded (F). These classifications would be consistent with the McCue site investigations; however, it should be noted that the NWI mapper erroneously includes the upland area west of flags WF300 to Pig Farm Road as the scrub-shrub classification.

Additionally, there are areas I have mapped separately from what the NWI mapper depicts. These are the areas of open water within the *Phragmites* dominated area, and the portion of the wetland that occurs in the maintained area south of the east terminal runway. The open water areas are classified as PUBH: Palustrine (P), Unconsolidated Bottom (UB), Permanently Flooded (H), and the maintained wetland area as PEM1E: Palustrine (P), Emergent (EM), persistent (1), Seasonally Flooded/Saturated (E).

South of Pig Farm Road

The identified wetland south of Pig Farm Road is represented by flag series WF400 – WF459. This wetland also consists of several classifications, including a very dense *Phragmites* community. Again, the delineated edge is entirely adjacent to areas of prior disturbances,

including a former storage ground and Pig Farm Road. Vegetation observed in the delineated wetland includes black gum, arrowwood, highbush blueberry, multiflora rose, *Phragmites*, common greenbrier and fox grape.

Vegetation in the upland areas include blackberry (*Rubus allegheniensis*), black locust, multiflora rose, arrowwood, sassafras, staghorn sumac, poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier, fox grape, goldenrod species and a dense stand of Japanese knotweed (*Reynoutria japonica*).

The NWI mapper primarily only maps the wetland area south of Pig Farm Road as E2EM1Pd: Estuarine (E), Intertidal (2), Emergent persistent (EM1), Irregularly Flooded (P), Partially Drained/Ditched (d). In performing the field delineations, McCue observed two additional classifications that are depicted on Figure 2B: narrow bands of PFO1E: Palustrine (P), Forested (FO), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E), and areas of PSS1E: Palustrine (P), Scrub-Shrub (SS), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E). It is also noted that the mapped E2EM1Pd should also have the *Phragmites* qualifier (5) as much of this area is dominated by *Phragmites.*

In addition, in interior portions of the E2EM1Pd area, there are created channels that have been classified here as E1UBLx: Estuarine (E), Subtidal (1), Unconsolidated Bottom (UB), Subtidal (L) excavated (x). It is noted that these water areas were mapped based on the CAD data from the prior restoration project and that these channels (e.g. Ordinary High Water (OHW) or Mean High Water (MHW)) were not field delineated.

Tweed New Haven Regional Airport: Uriah Street Area and Town Fair Tire Delineations (Figure 2C and P-3)

The identified wetland in this area has been represented by flag series WF800 – WF941. This wetland consists of several classifications, including a very dense *Phragmites* community. The beginning of the WF-800 series is the southern portion of the WF-400 series wetland complex. Vegetation observed in the delineated wetlands include red maple, gray birch (*Betula populifolia*), black gum, pussy willow, arrowwood, elderberry (*Sambucus canadensis*), black raspberry, multiflora rose, *Phragmites*, water purslane (*Ludwigia palustris*), lurid sedge (*Carex lurida*), Canada rush (*Juncus canadensis*), swamp milkweed (*Asclepias incarnata*), soft rush (*Juncus effusus*), several goldenrod species, common greenbrier and fox grape (*Vitis labrusca*).

The upland area consists primarily of previously disturbed areas and a large upland forested area. Vegetation in the upland areas include big-tooth aspen, trembling aspen (*Populus tremuloides*), black locust, red oak, privet, multiflora rose, glossy buckthorn, staghorn sumac, ragweed (*Ambrosia artemisiifolia*), poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier and garlic mustard.

The NWI mapper classifies the entire flagged wetland series as E2EM1/5Pd: Estuarine (E), Intertidal (2), Emergent persistent (EM1), Phragmites australis (5), Irregularly Flooded (P), Partially Drained/Ditched (d). Based on my observations in the field, I further mapped additional and separate classifications from what the NWI mapper depicts, including areas of PFO, PSS, and PEM (freshwater). It is also the opinion of McCue that the dense Phragmites area on the

Town Fair Tire property is likely not affected by tidal water regimes; therefore, this area of Phragmites is mapped as PEM.

Tweed New Haven Regional Airport South Area Delineations (Figure 2D and P-4)

The identified wetland in this area has been represented by flag series WF500 – WF530, WF600 – WF648 and WF700 – WF714. This wetland consists of several classifications: see the NWI mapper section below and Figure 2D. Vegetation observed in each corresponding classification is very consistent with the vegetation listed in this report. The more dominant species observed in each classification includes *Phragmites* in the E2EM and PEM Phrag type; pussy willow, alder (*Alnus incana*) and red maple in the PSS type; and various freshwater emergent species in the PEM type, including soft rush, goldenrod species, jewelweed (*Impatiens capensis*) and sensitive fern (*Onoclea sensibilis*).

The upland areas consist primarily of dense scrub-shrub habitat. The upland area in the vicinity of the WF-600 series consists of a former stone and mortar structure on an area that includes exposed ledge. Vegetation in the upland areas include trembling aspen, black locust, red oak, privet, multiflora rose, glossy buckthorn, staghorn sumac, Russian olive, black raspberry, ragweed, poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier and garlic mustard.

The NWI mapper classifies some of this area as both E2EM1/5Pd: Estuarine (E), Intertidal (2), Emergent persistent (EM1), Phragmites australis (5), Irregularly Flooded (P), Partially Drained/Ditched (d) and E2EM5/1P: Estuarine (E), Intertidal (2), Emergent (EM), Phragmites australis (5), Persistent (1), Irregularly Flooded (P).

Based on the McCue observations in the field, areas of PSS and PEM (freshwater) are further mapped. It is the opinion of McCue that these PSS and PEM areas are not likely not affected by tidal water regimes, in addition to the PEM Phrag area that is mapped south of the airport fence. Further salinity testing results may affect the opined mapped areas.

In addition, the tidal channel classified here as E1UBLx: Estuarine (E), Subtidal (1), Unconsolidated Bottom (UB), Subtidal (L) excavated (x), again based on the CAD data from the prior restoration project and field observations. However, the OHM and/or MHW were not specifically field delineated.

Tweed Airport West Area Delineations (Figures 2E & 2F, and P-5 & P-6)

The identified wetland in this location is represented by flag series WF1000 – WF1020, WF1100 – WF1114, WF1200 – WF1284 and WF1300 – WF1347. This wetland area consists of several classifications, including a very dense *Phragmites* community. The delineated edge is entirely adjacent to areas of prior disturbances, including maintained airport grounds and steep, previously excavated banks or fill slopes. Vegetation observed in the WF1000, 1200 and 1300 series delineated wetlands include black gum, arrowwood, highbush blueberry, multiflora rose, *Phragmites*, common greenbrier, seaside goldenrod (*Solidago sempervirens*), Asiatic bittersweet and fox grape. The WF-1100 series wetland and the areas along the WF1200-series that are mapped as E2EM contain hightide bush (*Iva frutescens*), saltmeadow cordgrass (*Spartina*

patens), saltwater cordgrass (*Spartina alterniflora*) (at the channel banks), panic grass (*Panicum* sp.) and seaside goldenrod.

Vegetation in the upland areas include black oak (*Quercus velutina*), gray birch, barberry (*Berberis thunbergii*), blackberry, black locust, multiflora rose, tree-of-heaven, staghorn sumac, poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier, fox grape, goldenrod species, Japanese knotweed and mugwort.

The NWI mapper classifies the following wetland classifications in this delineated area: E2EM1/5Pd: Estuarine (E), Intertidal (2), Emergent persistent (EM1), Phragmites australis (5), Irregularly Flooded (P), Partially Drained/Ditched (d), and PFO1E: Palustrine (P), Forested (FO), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E). In addition, the main channel east of Dean Street is classified as Riverine (R), Unknown Perennial (5), Unconsolidated Bottom (UB), Semipermanently Flooded (F), Excavated (x). Field observations during the delineation effort confirmed tidal influence north of the classified E1UBLx: Estuarine (E), Subtidal (1), Unconsolidated Bottom (UB), Subtidal (L) excavated (x) that is mapped west of the terminus of runway 2. The channels north of this classified area have therefore been classified as E1UBLx and mapped based on the CAD data from the prior restoration project; the channels (e.g. Ordinary High Water (OHW) or Mean High Water (MHW)) were not field delineated.

Additionally, one additional type has been mapped than what the NWI mapper depicts. This area is consistent with the areas delineated with the WF-1100 series and the area of approximate flag numbers WF1200 through WF1220 and is classified as E2EM1P: Estuarine (E), Intertidal (2), Emergent (EM), Persistent (1), Irregularly flooded (P); more saltwater species were present in these areas.

SOILS (Figure 3)

Multiple, detailed soil profiles were not investigated throughout the entire project area extent; however, random plots were examined throughout the wetland delineation process and wetland delineation data forms are provided. The Web Soil Survey (State of Connecticut, Western Part (CT601)) was reviewed; it is my opinion that the Web Soil Survey is generally consistent with the wetland delineations, however, some observations are noted below. The following is a list of the delineated wetland flag series and soils mapped within each area; the full Web Soil Survey map and descriptions are found in Appendix E:

WF100 – WF194:
Hydric soils: Walpole sandy loam (13) and Westbrook mucky peat (99)

Adjacent upland soils: Deerfield loamy fine sand (24A) and Udorthents-Urban Land Complex (306)

WF300 – WF384:
Hydric soils: Westbrook mucky peat (99)

Adjacent upland soils: Udorthents-Urban Land Complex (306); this soil series is mapped too broadly into the delineated wetland in the area east of flags WF300 – WF340 and south of the runway

WF400 – WF459:
Hydric soils: Westbrook mucky peat (99) (tidally influenced in interior sections)

Adjacent upland soils: Udorthents-Urban Land Complex (306) and Udorthents, smoothed (308)

WF500 – WF530, WF600 – WF648, WF700 – WF714:
Hydric soils: Sulfaquents (947); the majority of these delineations are mapped as non-hydric soils (see below). In the opinion of McCue, soils underlying the delineated wetlands most closely resemble the Westbrook mucky peat (99)

Adjacent upland soils: Deerfield loamy fine sand (24A), Penwood loamy sand (35B), Cheshire-Holyoke complex (77C), Penwood-Urban Land Complex (235B) and Udorthents, smoothed (308)

WF800/WF900:
Hydric soils: Sulfaquents (947); in the opinion of McCue, the Sulfaquents should be mapped to the delineated wetlands edge

Adjacent upland soils: Holyoke rock-outcrop complex (78E) and Udorthents, smoothed (308)

WF1000, WF1100, WF1200 and WF1300 series:
Hydric soils: Westbrook mucky peat (99) and Gales Ferry silt loam, intertidal (917)

Adjacent upland soils: Udorthents-Urban Land Complex (306)

The delineations were performed by Joseph P. McCue, PWS, whose qualifications include over 28 years' experience in the practice of wetland science, is a Professional Soil Scientist with the Society of Soil Scientists of Southern New England (SSSSNE), and a Professional Wetland Scientist (#2010) certified by the Society of Wetland Scientists (SWS).

Please note that the information provided herein represents the best professional judgment of McCue Environmental, LLC, and should not be construed to represent the finding of any regulatory agency.

Thank you for the opportunity to work with you on this project. Please contact me at (401) 595-4276 if you have any questions regarding this work, or if you require additional information.

Sincerely yours,
MCCUE ENVIRONMENTAL, LLC

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ✓ Surface Water (A1)
- ✓ High Water Table (A2)
- ✓ Saturation (A3)
- ✓ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ✓ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ✓ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ✓ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ✓	No _____	Depth (inches):	to 6" deep
Water Table Present?	Yes ✓	No _____	Depth (inches):	_____
Saturation Present? (includes capillary fringe)	Yes ✓	No _____	Depth (inches):	_____

Wetland Hydrology Present? Yes ✓ No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Prevalence Index = B/A = 3.03

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

✓ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ✓ No ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: WF175wet

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Type[1]	Loc[2]	Texture	Remarks
0 - 3	7.5YR 2/1	100					SL	
3 - 20	7.5YR 4/6	90	7.5YR 5/3	10			LS	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

[2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)

- ___ Thin Dark Surface (S9) (**LRR K, L**)
- ___ Iron-Manganese Masses (F12) (**LRR K, L, R**)
- ___ Piedmont Floodplain Soils (F19) (**MLRA 149B**)
- ___ Mesic Spodic (TA6) (**MLRA 144A, 145, 149B**)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (TF12)
- ✓ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes _____ No ✓

Remarks:

This is a shallow depression that drains southward to the primary wetland area. Soils in this specific location may not make hydric soil criteria, however, it is this biologists' opinion that this area should be considered wetland because up to 6" of standing water was present, Acer rubrum dominates the wetland, buttressed tree roots are present with other water marks, and green frogs were observed in the wetland.

Remarks: (Explain alternative procedures here or in a separate report.)

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes _____	No ✓	Depth (inches): _____
Water Table Present?	Yes _____	No ✓	Depth (inches): _____
Saturation Present? (includes capillary fringe)	Yes _____	No ✓	Depth (inches): _____

Wetland Hydrology Present? Yes _____ No ✓

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

		= Total Cover	

Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 7 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 14.3% (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x 1 =	0
FACW species	0	x 2 =	0
FAC species	13.5	x 3 =	40.5
FACU species	176.5	x 4 =	706
UPL species	38	x 5 =	190
Column Totals:	228 (A)		936.5 (B)

Prevalence Index = B/A = 4.11

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes _____ No ✓

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: WF175upl

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks

Total Number of Dominant Species Across All Strata: 1 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100 (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x 1 =	0
FACW species	98	x 2 =	196
FAC species	0	x 3 =	0
FACU species	0	x 4 =	0
UPL species	0	x 5 =	0
Column Totals:	98 (A)		196 (B)

Prevalence Index = B/A = 2.0

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

✓ 2 - Dominance Test is >50%

✓ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ✓ No ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: WF435wet

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0 - 20	7.5YR 3/1	100					hemic	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

[2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ✓ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)

- ___ Dark Surface (S7) (**LRR K, L**)
- ___ Polyvalue Below Surface (S8) (**LRR K, L**)
- ___ Thin Dark Surface (S9) (**LRR K, L**)
- ___ Iron-Manganese Masses (F12) (**LRR K, L, R**)
- ___ Piedmont Floodplain Soils (F19) (**MLRA 149B**)
- ___ Mesic Spodic (TA6) (**MLRA 144A, 145, 149B**)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (TF12)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes ✓ No _____

Remarks:

The specific location of this data plot is mapped as Udorthents-Urban Land Complex, but the soil was observed to be characteristic of the Westbrook mucky peat (98) of which the remainder of this marsh complex is mapped as.

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven Airport City/County: New Haven & East Haven Sampling Date: 4/25/2024

Applicant/Owner: _____ State: CT Sampling Point: WF435upl

Investigator(s): J. McCue (McCue Environmental, LLC) Section, Township, Range: _____

Landform (hillslope, terrace, etc.): small terrace, shrub dom. Local relief (concave, convex, none): none Slope (%): 1%

Subregion (LRR or MLRA): LRR R Lat: 41.259 Long: -72.8835 Datum: CT State Plane

Soil Map Unit Name: Udorthents-Urban Land Complex (306) NWI classification: _____

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✓ No _____ (If no, explain in Remarks.)

Are Vegetation _____, Soil _____, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes _____ No ✓

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No ✓	**Is the Sampled Area within a Wetland?** Yes _____ No ✓
Hydric Soil Present?	Yes _____	No ✓	
Wetland Hydrology Present?	Yes _____	No ✓	If yes, optional Wetland Site ID: _____

Remarks: (Explain alternative procedures here or in a separate report.)

This is an area subject to prior disturbances which have established with shrub and tree species.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)

Number of Dominant Species That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 0 (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x 1 =	0
FACW species	0	x 2 =	0
FAC species	3	x 3 =	9
FACU species	160.5	x 4 =	642
UPL species	0	x 5 =	0
Column Totals:	163.5 (A)		642 (B)

Prevalence Index = B/A = 3.93

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes _____ No ✓

Remarks: (Include photo numbers here or on a separate sheet.)

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ✓ Surface Water (A1)
- ✓ High Water Table (A2)
- ✓ Saturation (A3)
- ✓ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ✓ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ✓ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ✓	No _____	Depth (inches): 0"
Water Table Present?	Yes ✓	No _____	Depth (inches): 0"
Saturation Present? (includes capillary fringe)	Yes ✓	No _____	Depth (inches): 0"

Wetland Hydrology Present? Yes ✓ No _____

Applicant/Owner: _____ State: CT Sampling Point: WF814upl

Investigator(s): J. McCue (McCue Environmental, LLC) Section, Township, Range: _____

Landform (hillslope, terrace, etc.): scrub-shrub, slight slope Local relief (concave, convex, none): none Slope (%): 1%

Subregion (LRR or MLRA): LRR R Lat: 41.255 Long: -72.8867 Datum: CT State Plane

Soil Map Unit Name: Udorthents smoothed (308) NWI classification: _____

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✓ No _____ (If no, explain in Remarks.)

Are Vegetation _____, Soil _____, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes _____ No ✓

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No ✓	**Is the Sampled Area within a Wetland?** Yes _____ No ✓
Hydric Soil Present?	Yes _____	No ✓	
Wetland Hydrology Present?	Yes _____	No ✓	If yes, optional Wetland Site ID: _____

Remarks: (Explain alternative procedures here or in a separate report.)

This is an area subject to prior disturbances which have established with shrub and sapling species.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes _____	No ✓	Depth (inches): _____
Water Table Present?	Yes _____	No ✓	Depth (inches): _____
Saturation Present? (includes capillary fringe)	Yes _____	No ✓	Depth (inches): _____

Wetland Hydrology Present? Yes _____ No ✓

- ___ Redox Depressions (F8)

Indicators for Problematic Hydric Soils[3]:

- ___ 2 cm Muck (A10) (**LRR K, L, MLRA 149B**)
- ___ Coast Prairie Redox (A16) (**LRR K, L, R**)
- ___ 5 cm Mucky Peat or Peat (S3) (**LRR K, L, R**)
- ___ Dark Surface (S7) (**LRR K, L**)
- ___ Polyvalue Below Surface (S8) (**LRR K, L**)
- ___ Thin Dark Surface (S9) (**LRR K, L**)
- ___ Iron-Manganese Masses (F12) (**LRR K, L, R**)
- ___ Piedmont Floodplain Soils (F19) (**MLRA 149B**)
- ___ Mesic Spodic (TA6) (**MLRA 144A, 145, 149B**)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (TF12)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes _____ No ✓

Remarks:

Unable to obtain soil data due to fill edge.

ACOE Wetland Function-Value Evaluation Forms

McCue Environmental, LLC
Lafayette Mill, 650 Ten Rod Road
North Kingstown, RI 02852

Wetland Function-Value Evaluation Form

Total area of wetland *>50 ac.* Human made?_____ Is wetland part of a wildlife corridor? *yes* or a "habitat island"?_____

Adjacent land use *Dense residential, commercial and industrial* Distance to nearest roadway or other development *270 ft. North*

Dominant wetland systems present *PFO1E* Contiguous undeveloped buffer zone present *Yes*

Is the wetland a separate hydraulic system? *No* If not, where does the wetland lie in the drainage basin? *Lower portion*

How many tributaries contribute to the wetland? *1* Wildlife & vegetation diversity/abundance (see attached list)

Wetland I.D. *WF100 - WF194*

Latitude *41.2633* Longitude *-72.8804*

Prepared by: *McCue* Date *4/24/24*

Wetland Impact:
Type_____ Area_____

Evaluation based on:
Office ✓ Field ✓

Corps manual wetland delineation completed? Y ✓ N_____

Function/Value	Suitability Y	Suitability N	Rationale (Reference #)*	Principal Function(s)/Value(s)	Comments
Groundwater Recharge/Discharge	✓		*1 (very few), 2, 4, 5, 7, 15*	✓	*pr.well: https://portal.ct.gov/dph/drinking-water/dws/public-water-supply-map*
Floodflow Alteration	✓		*1, 3, 4, 5, 6, 7, 8, 9, 10, 11, 13*	✓	*Rationale cont.: 15, 17, 18 (12 unknown)*

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:12,000.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: State of Connecticut, Western Part
Survey Area Data: Version 2, Aug 30, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jun 14, 2022—Oct 6, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
6	Wilbraham and Menlo soils, 0 to 8 percent slopes, extremely stony	2.0	0.2%
13	Walpole sandy loam, 0 to 3 percent slopes	22.2	1.9%
24A	Deerfield loamy fine sand, 0 to 3 percent slopes	61.5	5.2%
35B	Penwood loamy sand, 3 to 8 percent slopes	27.1	2.3%
37C	Manchester gravelly sandy loam, 3 to 15 percent slopes	9.0	0.8%
55B	Watchaug fine sandy loam, 3 to 8 percent slopes	0.5	0.0%
63B	Cheshire fine sandy loam, 3 to 8 percent slopes	0.1	0.0%
70C	Branford-Holyoke complex, 3 to 15 percent slopes, very rocky	5.0	0.4%
77C	Cheshire-Holyoke complex, 3 to 15 percent slopes, very rocky	19.1	1.6%
78C	Holyoke-Rock outcrop complex, 3 to 15 percent slopes	3.4	0.3%
78E	Holyoke-Rock outcrop complex, 15 to 45 percent slopes	16.6	1.4%
87C	Wethersfield loam, 8 to 15 percent slopes	1.6	0.1%
87D	Wethersfield loam, 15 to 25 percent slopes	0.0	0.0%
98	Westbrook mucky peat, 0 to 2 percent slopes, very frequently flooded	7.5	0.6%
99	Westbrook mucky peat, 0 to 2 percent slopes, very frequently flooded, low halinity	95.2	8.0%
224A	Deerfield-Urban land complex, 0 to 3 percent slopes	30.6	2.6%
230C	Branford-Urban land complex, 8 to 15 percent slopes	18.4	1.5%
235B	Penwood-Urban land complex, 0 to 8 percent slopes	276.9	23.2%

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI

INTRODUCTION

Tweed New Haven Regional Airport (the "Airport") is a public airport located in the City of New Haven and Town of East Haven, CT, owned and operated by the City of New Haven (see **Figure 1, Overview Map** and **Figure 2, USGS Map** in **Appendix A**). The property is located along the New Haven-East Haven town-line with Long Island Sound approximately ¾-mile to the south, New Haven Harbor ¼ mile to the west, and Morris Cove approximately ¼-mile to the southwest. The Airport has two asphalt runways, Runway 2-20 which is approximately 5,200 feet long by approximately 150 feet wide oriented north-south, and Runway 14-32 (currently not in use) which is approximately 3,600 feet long by 100 feet wide with a northwest – southeast orientation.

According to field observations and a review of recent aerial photographs of the area, the Airport is set within a mixed residential, commercial, and industrial area. To the west of the Airport (between Dean Street and Townsend Avenue), land use is mostly residential whereas to the east (along Proto Drive and Commerce Street), it is mostly industrial. There is undeveloped land (wetlands) to the south of Runway 2-20 and to the southeast of the HVN property boundary.

Taxiways, aprons, parking lots and access driveways comprise the other paved areas on the airport property. Buildings include a terminal building and hangars housing planes and offices for private air carriers and other airport related businesses along with airport maintenance and operations structures including a fire and rescue building. Areas interior to and surrounding the runways and taxiways are comprised of mowed/maintained grasslands. Along the southwestern, southern, and southeastern perimeter of the airport are extensive vegetated tidal wetland systems with constructed channels and areas of open water. Inland wetlands occur at the northwestern, northern, northeastern, and eastern edges of the runway and taxiway areas. Some of the inland wetland areas appear to have been constructed as drainage features as they do not appear on United States Fish and Wildlife Service (USFWS) National Wetland Inventory (NWI) or CT Department of Energy and Environmental Protection (CTDEEP) wetland mapping. Previous wetland delineations by others did not identity wetland resources within these infield areas (ie where Wetlands 4 and 5 and a portion of Wetland 6 were delineated under this field survey). Wetlands 4 and 5 may be viewed by the USACE as isolated and thus may not be subject to USACE jurisdiction. A request for a jurisdictional determination is recommended for these wetlands.

HVN proposes multiple projects to continue advancing the Airport Master Plan Update, including the development of a new terminal area and a runway extension. The Tweed New Haven Airport Authority is preparing an Environmental Assessment for the project in accordance with the National Environmental Policy Act (NEPA) to implement elements of its Airport Master Plan. The wetland and watercourse delineation will be used to inform the NEPA process and permitting requirements.

METHODOLOGY

Historically impacted inland wetlands (some presumably man-made and offering limited functions and values) and one tidal wetland were delineated by FHI Studio soil scientists within the project areas in accordance with State and federal definitions and guidelines.

Tidal wetland limits were delineated in accordance with the State of Connecticut General Statutes (CGS) Section 22a-29 (Tidal Wetlands). Tidal wetlands are "…those areas which border on or lie beneath tidal waters, such as, but not limited to banks, bogs, salt marsh, swamps, meadows, flats, or other lowlands subject to tidal action, including those areas now or formerly connected to tidal waters, and whose surface is at or below an elevation of one foot above local extreme high water; and upon which may grow or be capable of growing…" tidal vegetation.

In 2012, the Connecticut General Assembly passed Public Act No. 12-101, which included a revision to the State's regulatory jurisdiction under CGS Section 22a-359. This revision changed the regulatory jurisdiction limit from the "high tide line" to the area up to and including the elevation of the "coastal jurisdiction line" (CJL) as determined for the State's major tidal waterbodies. The CJL is not delineated in the field, but is a set elevation for each municipality. It also states under CGS Section 22a-359, "For any tidal, coastal or navigable waters of the state located upstream of a tide gate, weir, or other device that modifies the flow of tidal waters, the coastal jurisdiction line for such tidal, coastal or navigable waters shall be the elevation of mean high water as found at the downstream location of such device".

Under CGS Section 22a-39 the identification of Connecticut-regulated inland wetlands is determined by the limit of any of the soil types designated as poorly drained, very poorly drained, alluvial, or floodplain by the National Cooperative Soils Survey, of the Natural Resources Conservation Service (NRCS) of the United States Department of Agriculture (USDA) (§22a-38-15) that are not subject to CGS Section 22a-29 as defined above. NRCS soil surveys were consulted to compare observed soil types to those mapped in the project area. The *Field Indicators for Identifying Hydric Soils in New England Version 4* (2018) and *Field Indicators of Hydric Soils in the United States, Version 8.2* (2018) were used to identify hydric soils, which include both poorly and very poorly drained soils.

Identification of watercourses, as regulated by Connecticut, was based upon the definitions contained in Section 22a-38 of Chapter 440 of the Connecticut General Statutes of Connecticut; including the following hydrological systems under the term "watercourse": rivers, streams, brooks, waterways, lakes, ponds, marshes, swamps, bogs, and all other bodies of water, natural or artificial, vernal or intermittent, public or private.

The Ordinary High Water (OHW) mark as defined by the USACE for the purposes of the Clean Water Act (CWA) lateral jurisdiction at 33 CFR 328.3€ is the "line on the shore established by the fluctuations of water and indicated by physical characteristics such as clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial

vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas". The OHW mark was flagged with sequentially labeled blue flagging and is considered the lateral extent of Federal jurisdiction over non-tidal Waters of the United States (US) in the absence of adjacent wetlands.

Federal wetlands, both tidal and inland, were delineated based on the United States Army Corps of Engineers (USACE) 1987 *Wetland Delineation Manual* and the USACE 2012 *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region – Version 2.0*. Federal wetland boundaries were determined by the presence of dominant hydrophytic vegetation, presence of hydric soils, and evidence of wetland hydrology. In tidally influenced areas, the USACE regulates up to the high tide line (HTL) elevation. USACE Wetland Determination Data Forms were not completed for tidal resource delineations, since the wetlands are tidal, and jurisdiction is defined by the HTL elevation. USACE Field Documentation Forms for the delineated inland wetlands are provided in **Appendix C**.

The limit of the wetland delineation fieldwork was confined to distinct project areas where activities are likely to be proposed at the Airport (see Figures 1 and 2). Field work was conducted over several site visits conducted between August and October 2021. The wetland/upland boundary was marked in the field using consecutively numbered flags, and the locations of the flags were recorded by FHI Studio using a GPS unit capable of achieving sub-meter accuracy (note that FHI Studio is not a licensed surveyor) and subsequently located and documented by a licensed land surveyor. Wetland functions and values were documented in accordance with the USACE *Highway Methodology Supplement* (1999) guidelines (see **Appendix B**). Photographs were taken at representative locations in the wetlands and are included in **Appendix D**.

RESULTS

Seven wetland systems were delineated in the field, numbered 1 to 7 from north to south, within the areas of investigation (see **Figure 3, Wetland Map** in **Appendix A**). Wetlands 1 – 6 are inland wetlands. Wetland 7 is a tidal wetland - a good portion of which, within the project area, has been subject to past alterations and disturbance related to the relocation of Morris Creek sometime prior to 2010. A tide gate is located southwest of Wetland 7, which likely regulates the amount of tidal flow to wetlands upstream of the tide gate.

All wetlands lie within the Southcentral Coast Major Basin No. 5, regional basin 50 and subregional basin 5000 and drain ultimately to Long Island Sound via Morris Creek. Wetland System No. 1 drains west to Tuttle Creek (a tributary of Morris Creek) in Local Basin Number 5000-45 (CT Environmental Conditions Online, Advanced Viewer, 2021). Wetland 7 and a portion of the southwestern limits of Wetland 6 drains to this same basin series. Wetlands 2-5 and a majority of Wetland 6 drain to the east and southeast to Morris Creek in Local Basin Number 5000-46 (CT Environmental Conditions Online, Advanced Viewer, 2021). The confluence of these two drainages lies immediately south of the Airport. The CJL elevation for New Haven is 4.6 feet

NAVD88, while that of East Haven is 4.5 feet NAVD88. According to information provided in an Environmental Assessment for the Taxiway and Drainage Improvement Project, "the CJL for the wetland within the Tweed Airport boundary above the tide gate on Morris Creek is 3.5' NGVD. All wetlands below this elevation for the purpose of the project are considered tidal, and they are therefore under the jurisdiction of CTDEEP.

General descriptions of these seven wetlands are provided below, with additional detailed information for each wetland in **Table 1**.

Wetland 1 is located at the northwestern limit of the airport. It contains a reach of Tuttle Brook and associated bordering vegetated wetlands. The reach of Tuttle Brook originates at a double box culvert (through which Tuttle Brook is conveyed underneath Dodge Avenue) and extends approximately 1,200 linear feet southerly downstream before entering another double box culvert underneath a service road to the airport that is accessed off Dodge Avenue in New Haven. The reach of Tuttle Brook within the project area is best classified as a Riverine Lower Perennial Watercourse characterized by an unconsolidated bottom dominated by sand and organic matter substrate(R2UB2/4). Only the northern-most reach of Tuttle Brook was delineated within the airport boundary. OHW flags were hung in the field to demarcate the limits of Tuttle Brook. The bordering vegetated wetlands along Tuttle Brook consists largely of stands of palustrine emergent persistent vegetation (e.g., Broad-leaved Cattail and Common Reed *Phragmites australis*-dominated stands - PEM1/5. Woody shrubs consisting primarily of American Black Elderberry and an alder sp., occur sporadically.

Wetland 2 is located at the northeastern limit of the airport in the area between the General Aviation Parking and the East Ramp. It consists of a palustrine forested, broad-leaved deciduous, seasonally flooded/saturated, and ditched wetland system (PFO1Ed) with a small palustrine emergent *Phragmites australis*-dominated inclusion that appears to be permanently flooded (PEM5H). Characteristic vegetation includes Red Maple, Black Gum, and Pin Oak in the tree layer, Northern Spicebush and Sweet Pepperbush in the shrub layer. *Phragmites* flanks most of the ditched portion of the wetland in the herbaceous layer.

Wetland 3 is located adjacent to the mowed areas between the Air Traffic Control Tower and the East Ramp's tarmac. It consists of a palustrine emergent, nonpersistent, intermittently flooded/saturated (PEM2J) wetland that collects sheet flow runoff and direct precipitation. It is characterized by Soft Rush, Water Purslane, Broom Sedge, a spike rush sp., and various other rushes, sedges, and hydrophytic grasses (incl. the state-threatened *Paspalum laeve*).

Wetland 4 is a shallow drainage area located north of Runway 32 which forms its southwestern boundary. It is bounded by Taxiway C on the northeast side, and Taxiway H on the southwest side. Wetland 4 consists of a palustrine emergent, nonpersistent, intermittently flooded/saturated (PEM2J) wetland. It is dominated by various species of hydrophytic plant species such as Soft Rush, Straw-colored Sedge, Curly Dock, Calico Aster, and the state-threatened Field Beadgrass. This wetland receives sheet flow runoff from the surrounding

impervious runways and tarmacs. A catch basin serves as the outlet that regulates the surface water level of the wetland when it receives collected stormflows. Based upon its morphology and drainage structures, it appears that this wetland has formed within a drainage area that was constructed with the adjacent Runway 14/32 and Taxiways Band C were built. While it is a routinely mowed lawn, since Runway 14/32 has not been used for years, routine maintenance of the basin has waned which may have allowed for the development of hydrophytic plant community. A suspected high groundwater table in this area may support these hydrophytes. Functions and values are low for this wetland.

Wetland 5 is a similar shallow drainage area bounded by Taxiway C on the northeast and southeast sides, Taxiway H on the northwest side and former Runway 32 on the southwest side. It consists of a palustrine emergent, nonpersistent, intermittently flooded (PEM2J) wetland that also collects sheet flow runoff and direct precipitation. Hydrophytic vegetation observed within this wetland included the following: Soft Rush, Strawcolored Flatsedge, Field Beadgrass, Long-leaved Redtop Panicgrass, Rough Barnyardgrass, Spike Rush, Sharp-fruit Rush, Marsh Seedbox, Swamp Smartweed, Common Threesquare, Yellow Bristlegrass, and Calico aster. A catch basin serves as the outlet that regulates the surface water level of the wetland when it receives stormflows. Based upon its morphology and drainage structures, it appears that this wetland may have also formed within a drainage area that was constructed with the adjacent Runway 14/32 and Taxiways Band C were built, similar to Wetland 4. Similarly, while it is a routinely mowed lawn, since Runway 14/32 has not been used for years, routine maintenance of the basin has waned which may have allowed for the development of a hydrophytic plant community. During field work, high levels of standing water were observed in this catch basin, which may indicate high groundwater levels in this area. Functions and values are low for this wetland.

Although a contiguous wetland system, Wetland 6 is characterized by two different wetland types. Wetland 6A consists of palustrine emergent wetlands within a mowed lawn airfield. Wetland 6B consists of a palustrine forested broad-leaved deciduous, seasonally saturated, wetland (PFO1E), and bordering palustrine emergent wetlands (PEM2) containing non-persistent, persistent and Phragmites-dominated subclasses. An upper reach of Morris Creek bisects the PFO portion of this wetland east of Taxiway C and Runway 32. Sheet flow runoff from the adjacent runways and taxiways and direct precipitation contribute to the hydrology of this wetland, however portions of the wetland are transected by permanently flooded / excavated channels lending evidence of a suspected high groundwater elevation. Seasonal flooding along Morris Creek also likely contributes to the sustaining hydrology of the wetland. Red Maple dominates the PFO portion, while *Phragmites* has significant cover in the PEM portion. Other hydrophytes noted included the following: Northern Spicebush, Highbush Blueberry, Winterberry, Northern Arrowwood, Sweet Pepperbush, Common Reed, Purple Loosestrife, Steeplebush, Spotted Joe Pye-weed, Flat-top Goldenrod, Boneset, and Spike Rush east of Taxiway C (Wetland 6B). To the west of the former runway 14/32 within the mowed portion of the RSA (Wetland 6A), the wetland is dominated by Field Beadgrass, Spike Rush, Brownish Beakrush, and

Yellow Bristlegrass. Functions and values are low for the 6A portion of the wetland due to its maintained nature. Functions and values are slightly higher for the 6B portion of the wetland.

Wetland 7 consists of an estuarine intertidal emergent persistent / *Phragmites*-dominated system (E2EM1/5) bordering estuarine subtidal creeks (Morris Creek and Tuttle Brook) with unconsolidated bottoms and irregularly flooded tidal regimes E1UBL. The tidally influenced dominant vegetation of this wetland includes *Phragmites australis* (an invasive plant species) and several halophytic grasses (e.g., *Spartina alterniflora, Spartina patens, Distichlis spicata,* etc.). The wetland is bordered by a zone of *Baccharis halimifolia* shrubs.

The wetland ID/flagging sequence, wetland type, soil type and characteristic vegetation of each of the seven delineated wetlands is summarized in **Table 1**. Additionally, the United States Fish and Wildlife Service (USFWS), National Wetland Inventory (NWI) map is provided as **Figure 4 in Appendix A**, and the United States Department of Agriculture's Natural Resource Conservation Service (NRCS) Soils Map is provided as **Figure 5 in Appendix A.** Most of the project area is located within the 100-year floodplain limits. The Federal Emergency Management Agency (FEMA) floodplain map is provided as **Figure 6** in **Appendix A**.

NRCS MAPPED AND OBSERVED SOILS

The mapped NRCS soils and observed soils on, and in the vicinity of, the study area are depicted by their soil number on **Figure 5** in **Appendix A**. The mapped NRCS soils and observed soils within the study area are listed in **Table 2** along with their drainage class and NRCS official soil series description.

CONCLUSION

Six of the seven wetlands (Wetland Nos. 1 through 6) delineated among the various project areas on the site are considered inland wetlands and watercourses and were delineated accordingly. The state and federal jurisdictional limits of these six wetlands are coincident. One wetland system (Wetland No. 7) is subject to tidal influence and contains one or more species of tidal wetland vegetation. Thus, Wetland No. 7 is considered a tidal wetland in accordance with the State of Connecticut definition and, as such, is regulated under CGS Section 22a-29 (Tidal Wetlands). These tidal wetlands are also regulated by the USACE. Wetland 1, Wetland 7, and a portion of Wetland 6 drain to the south to Tuttle Brook, a tributary to Morris Creek, which in turn drains to Long Island Sound south of Morris Cove in New Haven, CT. Wetland 3 appears to be an isolated wetland with no apparent direct hydrologic connection to other site wetlands unless it connects through a submerged culvert that was not readily observable at the time of our delineation. Wetlands 4, 5 and a portion of Wetland 6 drain to the southeast – either directly (i.e., via excavated channel) or indirectly (via groundwater discharge) – to an extensive interspersed wetland transected by Morris Creek. In regards to Wetlands 3, 4, and 5, which are

presumed to be constructed drainage areas, one or more of these wetlands may be viewed by the USACE as isolated and thus may not be subject to USACE jurisdiction. A request for a jurisdictional determination is recommended for these wetlands.

Table 1: Wetlands Within the Limit of Wetland Delineation Fieldwork

Wetland ID (flagging sequence)	Wetland Type [a]	General Description	Soil Type (drainage class)	Principal Functions and Values of the Wetland	Characteristic Vegetation (indicator status) [b]
Wetland 1 (OHWA1-A33; OHWB1-B11; E1-E48)	R2UB2/4 and PEM1/5	A relocated reach of Tuttle Brook flanked by bordering vegetated wetland dominated by emergent persistent vegetation.	Walpole (Poorly Drained) and Scarboro (Very Poorly Drained)	Sediment/Toxicant Retention Nutrient Removal Production Export	*Sambucus nigra* (FACW) *Alnus sp.* *Phragmites australis* (FACW) *Typha latifolia* (OBL) *Onoclea sensibilis* (FACW)
Wetland 2 (H1-H32)	PFO1Ed and PEM5H	Red Maple swamp adjacent to an excavated channel that drains easterly and is flanked by stands of Phragmites	Walpole (Poorly drained) and Aquents (poorly drained fill materials)	Sediment/Toxicant Retention Nutrient Removal	*Acer rubrum* (FAC) *Nyssa sylvatica* (FAC) *Quercus palustris* (FACW) *Clethra alnifolia* (FAC) *Lindera benzoin* (FACW) *Vaccinium corymbosum* (FACW) *Phragmites australis* (FACW)

Wetland 7 (C1-C104)	E2EM1/5 P and E1UBL	The majority of this wetland system consists of a *Phragmites australis*-dominated tidal wetland bordered by a zone of *Baccharis halimifolia* landward.	Aquents (poorly drained fill materials)	Floodflow Alteration Fish and Shellfish Habitat Wildlife Habitat Uniqueness/Heritage	*Phragmites australis* (FACW) *Spartina alterniflora* (OBL) *Spartina patens* (FACW) *Distichlis spicata* (FACW) *Juncus gerardii* (OBL) *Baccharis halimifolia* (FACW) *Iva frutescens* (FACW)

Notes:

(a) Wetland Type (Cowardin, et. al., 1979 and Federal Geographic Data Committee, 2013)
R3UB2/4 – Riverine lower perennial unconsolidated bottom (sand/mud) watercourse
PFO1E – Palustrine Forested Broad-leaved Deciduous seasonally flooded/saturated wetland
PEM5H – Palustrine Emergent *Phragmites australis*-dominated permanently flooded wetland
PEM2 – Palustrine Emergent, non-persistent wetland
PEM2J – Palustrine Emergent, non-persistent intermittently-flooded wetland
E2EM1/5P – Estuarine intertidal emergent, persistent/*Phragmites australis*, irregularly flooded wetland

Wetland ID (flagging sequence)	Wetland Type [a]	General Description	Soil Type (drainage class)	Principal Functions and Values of the Wetland	Characteristic Vegetation (indicator status) [b]
		E1UBL – Estuarine subtidal, unconsolidated bottom, subtidal deepwater habitat (b) Wetland Indicator Status: OBL (Obligate): Almost always occur in wetland FACW (Facultative Wetland): Usually occur in wetland, but may occur in non-wetland FAC (Facultative): Occur in wetland or non-wetland **Bold text** = State listed plant species			

Table 2: NRCS Mapped Soils in the Vicinity of the Project Area

Soil ID	Soil Name	Drainage Class	Official NRCS Soil Series Description
24	Deerfield Loamy Sand	Moderately well-drained	Soils belonging to the Deerfield series consists of loamy sands of glaciofluvial deposits. They are derived from acidic crystalline rocks such as granite, gneiss, and schist. They are recognized as farmland soils of statewide importance.
37	Manchester gravelly sandy loam	Excessively-drained	The soils of the Manchester series consists of gravelly sandy loam that originated from glaciofluvial deposits. They are derived from acidic red sandstone, shale, and conglomerate bedrocks. They are recognized as farmland soils of statewide importance.
98	Westbrook mucky peat	Very poorly drained	The Westbrook series consists of very deep soils formed in organic deposits over loamy mineral material. They are in tidal marshes subject to inundation by salt water twice daily.
306	Udorthents-Urban Land complex	Well drained	This complex consists of soils that have been disturbed by cutting or filling, and areas that are covered by buildings and pavement.
308	Udorthents, smoothed	Moderately well drained	Udorthents, smoothed, consists of areas from which soil material has been excavated, and nearby areas in which this material has been deposited. The original soil material is generally excessively drained to moderately well drained, and ranges from nearly level to very steep.
	Aquents (un-mapped)	Poorly to very poorly drained	Aquents are soils formed in human transported material or on excavated (cut) landscapes. They typically exist as smaller units within Udorthent soil materials.

The larger wetland complexes that are not within the maintained areas around the runways form important habitat systems and wildlife corridors that provide resources for various fish and wildlife species known to occur in tidal marshes and tidal creeks. The tidal wetlands within the maintained areas around the runways provide limited habitat for various wildlife species of conservation concern. *Paspalum laeve*, a characteristic wetland plant of the herbaceous layer in multiple PEM wetlands on the site, is listed in the State of Connecticut Endangered Species Act as Threatened. A "Threatened" designation is given to plants that have been documented by research and scientific inventory to occur at only six to nine locations in the state. Field Beadgrass is primarily restricted to sites within CT's coastal zone such as Old Lyme, East Haddam, Groton

(W. Moorhead, personal communication), in undisclosed sites in New Haven County (Magee and Ahles, 1999); and in a similar biogeographic zone in NY (e.g., on Fisher's Island and in various municipalities of Long Island, based upon FHI's review of New York State Museum specimen labels). The density and distribution of this species on the Airport has not yet been determined. It is recommended that these metrics be completed during the permitting stage of the project.

Appendix C - USACE Wetland Documentation Dataforms

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven (HVN) Airport City/County: New Haven/New Haven Sampling Date: 10-29-21

Applicant/Owner: City of New Haven State: CT Sampling Point: E36U

Investigator(s): AJZ/JJW Section, Township, Range:

Landform (hillside, terrace, etc.): Local relief (concave, convex, none): Slope (%):

Subregion (LRR or MLRA): LRR R Lat: -41.27178354 Long: -72.88871735 Datum:

Soil Map Unit Name: Deerfield Loamy fine sand NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No (If no, explain in Remarks.)

Are Vegetation Y, Soil Y, or Hydrology Y significantly disturbed? Are "Normal Circumstances" present? Yes No X

Are Vegetation N, Soil N, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes	No X	**Is the Sampled Area**		
Hydric Soil Present?	Yes	No X	**within a Wetland?**	**Yes**	**No** X
Wetland Hydrology Present?	Yes	No X	If yes, optional Wetland Site ID:		

Remarks: (Explain alternative procedures here or in a separate report.)
Much of the upland vegetation was mowed;.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes	No X	Depth (inches):
Water Table Present?	Yes	No X	Depth (inches):
Saturation Present? (includes capillary fringe)	Yes	No X	Depth (inches):

Wetland Hydrology Present? **Yes** **No** X

Number of Dominant Species That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 0.0% (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x 1 =	0
FACW species	0	x 2 =	0
FAC species	0	x 3 =	0
FACU species	79	x 4 =	316
UPL species	3	x 5 =	15
Column Totals:	82 (A)		331 (B)
Prevalence Index = B/A =			4.04

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** ___ **No** X

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: E36U

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-8	7.5YR 2.5/1						Sandy	
8-12	5YR 4/4						Sandy	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Dark Surface (S7)
- ___ Polyvalue Below Surface (S8) (**LRR R, MLRA 149B**)

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven (HVN) Airport City/County: New Haven/New Haven Sampling Date: 10-29-21

Applicant/Owner: City of New Haven State: CT Sampling Point: E36W

Investigator(s): AJZ/JJW Section, Township, Range:

Landform (hillside, terrace, etc.): river terrace Local relief (concave, convex, none): concave Slope (%):

Subregion (LRR or MLRA): LRR R Lat: 41.27177811 Long: -72.88867746 Datum:

Soil Map Unit Name: Deerfield Loamy fine sand NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No (If no, explain in Remarks.)

Are Vegetation Y, Soil N, or Hydrology Y significantly disturbed? Are "Normal Circumstances" present? Yes No X

Are Vegetation N, Soil N, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes X	No	**Is the Sampled Area**
Hydric Soil Present?	Yes X	No	**within a Wetland?** **Yes** X **No**
Wetland Hydrology Present?	Yes X	No	If yes, optional Wetland Site ID:

Remarks: (Explain alternative procedures here or in a separate report.)

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- X High Water Table (A2)
- X Saturation (A3)
- ___ Water Marks (B1)
- X Sediment Deposits (B2)
- X Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- X Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- X FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes	No X	Depth (inches):
Water Table Present?	Yes X	No	Depth (inches): 6
Saturation Present? (includes capillary fringe)	Yes X	No	Depth (inches): 0

Wetland Hydrology Present? **Yes** X **No**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** X **No** ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: H19W

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-3	7.5YR 2.5/1	100					Mucky Sand	
3-12	7.5YR 4/2	85	5YR 3/4	15	C	M	Sandy	Distinct redox concentrations

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ___ Histosol (A1)

Hydric Soil Present? **Yes** X **No** ___

Remarks:

This data form is revised from Northcentral and Northeast Regional Supplement Version 2.0 to reflect the NRCS Field Indicators of Hydric Soils version 7.0 March 2013 Errata. (http://www.nrcs.usda.gov/Internet/FSE_DOCUMENTS/nrcs142p2_051293.docx)

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven Airport (HVN) City/County: East Haven/New Haven Sampling Date: 10-29-21

Applicant/Owner: City of New Haven State: CT Sampling Point: B7U

Investigator(s): Anthony Zemba; Josh Weiss Section, Township, Range:

Landform (hillside, terrace, etc.): Local relief (concave, convex, none): convex Slope (%):

Subregion (LRR or MLRA): LRR R Lat: 41.26613223 Long: -72.88470274 Datum:

Soil Map Unit Name: Udorthents NWI classification: n/a

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No (If no, explain in Remarks.)

Are Vegetation Y, Soil Y, or Hydrology Y significantly disturbed? Are "Normal Circumstances" present? Yes No X

Are Vegetation N, Soil Y, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes	No X	**Is the Sampled Area**
Hydric Soil Present?	Yes	No X	**within a Wetland?** **Yes** **No** X
Wetland Hydrology Present?	Yes	No X	If yes, optional Wetland Site ID:

Remarks: (Explain alternative procedures here or in a separate report.)
Area augmented with historical fill material?

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)
- Water-Stained Leaves (B9)
- Aquatic Fauna (B13)
- Marl Deposits (B15)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres on Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Drainage Patterns (B10)
- Moss Trim Lines (B16)
- Dry-Season Water Table (C2)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Stunted or Stressed Plants (D1)
- Geomorphic Position (D2)
- Shallow Aquitard (D3)
- Microtopographic Relief (D4)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes	No X	Depth (inches):
Water Table Present?	Yes	No X	Depth (inches):
Saturation Present? (includes capillary fringe)	Yes	No X	Depth (inches):

Wetland Hydrology Present? **Yes** **No** X

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven Airport (HVN) City/County: East Haven / New Haven Sampling Date: 10-29-21

Applicant/Owner: City of New Haven State: CT Sampling Point: F19W

Investigator(s): Anthony Zemba; Josh Weiss Section, Township, Range:

Landform (hillside, terrace, etc.): Local relief (concave, convex, none): convex Slope (%):

Subregion (LRR or MLRA): LRR R Lat: 41.26247437 Long: -72.88275629 Datum:

Soil Map Unit Name: Udorthents NWI classification: n/a

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No (If no, explain in Remarks.)

Are Vegetation Y, Soil Y, or Hydrology Y significantly disturbed? Are "Normal Circumstances" present? Yes No X

Are Vegetation N, Soil Y, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes X	No	**Is the Sampled Area**
Hydric Soil Present?	Yes X	No	**within a Wetland?** **Yes** X **No**
Wetland Hydrology Present?	Yes X	No	If yes, optional Wetland Site ID:

Remarks: (Explain alternative procedures here or in a separate report.)
Area augmented with historical fill material?

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- Surface Water (A1)
- X High Water Table (A2)
- X Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- X Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)
- Water-Stained Leaves (B9)
- Aquatic Fauna (B13)
- Marl Deposits (B15)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres on Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Drainage Patterns (B10)
- Moss Trim Lines (B16)
- Dry-Season Water Table (C2)
- Crayfish Burrows (C8)
- X Saturation Visible on Aerial Imagery (C9)
- Stunted or Stressed Plants (D1)
- X Geomorphic Position (D2)
- Shallow Aquitard (D3)
- Microtopographic Relief (D4)
- X FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes	No X	Depth (inches):
Water Table Present?	Yes X	No	Depth (inches): 8
Saturation Present? (includes capillary fringe)	Yes X	No	Depth (inches): 5

Wetland Hydrology Present? **Yes** X **No**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:
Topgraphic depression. Outlet controlled by drop inlet elevation?

VEGETATION – Use scientific names of plants.

Sampling Point: F19W

Remarks: (Explain alternative procedures here or in a separate report.)
Area contains historical fill material. Located in Wetland 6.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- Surface Water (A1)
- High Water Table (A2)
- Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)
- Water-Stained Leaves (B9)
- Aquatic Fauna (B13)
- Marl Deposits (B15)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres on Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Drainage Patterns (B10)
- Moss Trim Lines (B16)
- Dry-Season Water Table (C2)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Stunted or Stressed Plants (D1)
- Geomorphic Position (D2)
- Shallow Aquitard (D3)
- Microtopographic Relief (D4)
- FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes	No X	Depth (inches):
Water Table Present?	Yes	No X	Depth (inches):
Saturation Present? (includes capillary fringe)	Yes	No X	Depth (inches):

Wetland Hydrology Present? **Yes** **No** X

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Column Totals:	70 (A)		280 (B)

Prevalence Index = B/A = 4.00

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** ___ **No** X

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: A100U

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-3	7.5YR 2.5/1						Sandy	
3-8	5YR 3/3						Sandy	
8-13	5YR 4/4						Sandy	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Dark Surface (S7)
- ___ Polyvalue Below Surface (S8) (**LRR R, MLRA 149B**)
- ___ Thin Dark Surface (S9) (**LRR R, MLRA 149B**)

UPL species	15	x 5 =	75
Column Totals:	135 (A)		360 (B)

Prevalence Index = B/A = 2.67

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

X 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** X **No** ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: D84W

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

*CT defines inland wetlands as "land, including submerged land, which consists of any of the soil types designated as poorly drained, very poorly drained, alluvial, and floodplain" per the United States Department of Agriculture's Natural Resources Conservation Service Soil Survey. [CGS 22a-38(15)]

[1]Identify Direct Fill activity; examples may include use of timber mats, construction of a structure, road, trail, parking lot, etc.

[2]Identify Additional Impact activity; examples may include vegetation clearing, vegetation conversion, excavation/dredging, draining/dewatering/drawdown, inundation/flooding, grading, etc.

[3]CT defines intermittent watercourse as: "delineated by a defined permanent channel and bank and *the occurrence of two or more of the following* : (A) Evidence of scour or deposits of recent alluvium or detritus, (B) the presence of standing or flowing water for a duration longer than a storm incident, and (C) the presence of hydrophytic vegetation." [CGS 22a-38(16)]

[4]Watercourse flow characteristics include pools, runs, and/or riffles. If intermittent, write NA

[5]Watercourse substrates include silt/clay, sand, gravel, cobble, boulder, and/or bedrock.

[6]CT Water Quality Classification information is located on the DEEP website at https://www.ct.gov/deep/cwp/view.asp?a=2719&q=325618&deepNav_GID=1654

Executive Summary

Introduction

This Compensatory Mitigation Plan (the Mitigation Plan) is submitted in support of the proposed Tweed New Haven Regional Airport Runway Extension and Terminal Expansion (the Proposed Project) on behalf of the Tweed New Haven Airport Authority and The New HVN, LLC. The design of the Proposed Project reflects an extensive effort to avoid or, when avoidance is not possible, minimize impacts to wetlands. Despite this effort, the Proposed Project will result in unavoidable impacts to regulated natural resource areas.

The applicants are entering into Permittee Responsible Mitigation with the goal of creating new salt marsh habitat and enhancing the existing salt marsh habitat surrounding the Tweed New Haven Airport. The enhancement will focus on reducing the dominance of *Phragmites australis* (common reed) and promoting native *Spartina alterniflora* (saltmarsh cordgrass) communities, to mitigate for unavoidable impacts as a result of the Proposed Project activities. The primary mitigation strategy is to increase the duration of inundation under highly saline conditions, which deters growth of *Phragmites.* The proposed mitigation uses the existing tide gate controls to alter the hydrology within the intertidal mitigation wetlands. The proposed mitigation includes increasing the duration of brackish water inundation within the mitigation wetlands by initially increasing the inundation time from four hours to six hours per tidal cycle, and with monitoring throughout the first growing season following commencement of the Mitigation Work Plan to adjust the inundation duration as needed in response to *Phragmites* growth. By adjusting the hydrological conditions, the aim is to reduce the competitive advantage of *Phragmites,* which thrives in lower salinity environments, and promote *Spartina* as an intertidal marsh species that is better adapted to higher salinity and more frequent tidal inundation.

In addition to enhancement efforts, the mitigation project will create new intertidal salt marsh habitat at the Tweed New Haven Airport property. Three upland areas have been identified where existing soil will be removed, and a clean, sandy planting medium will be placed at a one-foot depth with final grades being within the upper quarter of the tidal range. These areas will be planted with native vegetation, including *Spartina alterniflora* in the low marsh zones.

With the benefit of regulatory agency guidance, on behalf of the Tweed New Haven Airport Authority and The New HVN, LLC (the Applicants), has arrived at a Mitigation Plan that would meet the requirements of federal, state and city law. This Mitigation Plan provides a summary of the Applicants' efforts to date and the critical features of its proposed compensatory mitigation.

Project Impact

The Proposed Project Site is located at the Tweed New Haven Airport (Airport), which is on the boundary between the City of New Haven and the Town of East Haven, Connecticut. The Airport is situated approximately ¾-mile north of Long Island Sound, ¼-mile east of New Haven Harbor, and ¼-mile from Morris Cove.

The Proposed Project activities consist of extension of the main Runway 02-20, construction of a new terminal building on the east side of the Airport, construction of an associated taxi lane and apron,

construction of approximately 4,000 new parking spaces, construction of an access road and causeway connecting the new terminal to Proto Drive and associated ancillary grading and drainage. The increased runway length and terminal are necessary to increase the operational efficiency of the Airport while complying with the federal Aviation Administration (FAA) safety and design standards.

The unavoidable direct and indirect impacts that are under the jurisdiction of the State of Connecticut per Connecticut General Statutes Sections 22a-36 through Sec. 22a-45 and would result from the construction of the Proposed Project are as follows:

Table 1 Summary of Wetland Impacts

Wetland #	NWI Classification Code	Impacts CTDEEP (acre)	Impacts USACE (acres)
Wetlands 4, 5 and 6	PEM2J	8.74	4.94
Wetland 6	PSS	0.02	0.01
	PEM Phragmites	0.54	0.54
	PFO1E	0.01	0.01
Total		9.31	5.50

*Because the US Army Corps of Engineers (USACE) has determined that wetlands 4 and 5, which are PEM wetlands, are not Waters of the United States, the wetland impact that will require permitting under the USACE Individual Permit is 5.50 acres.

In its design the Applicants have sought to avoid, or when avoidance is not possible, minimize impacts to regulated natural resource areas resulting from the Proposed Project to the maximum extent practicable.

Tidal Water Surface Elevation and Salinity Data Collection

Tidal water surface elevation and salinity data were collected from the Tweed New Haven Airport proposed marsh mitigation areas from July to September 2024. The results of the data collection effort support that water surface elevations upstream of the tide gate structure are regulated to stay at or below elevation 2.0 feet NAVD88 during periods of normal operation. The results indicate that the tidal column may not fully penetrate into the dense stands of *Phragmites* within the marsh mitigation areas, potentially limiting the benefits of tidal exchange in these areas. The tidal prism does not fully extend to the upstream extents of the marsh as managed under normal operational procedure. Freshwater inputs appear to be lowering salinity levels in the upper regions of the northwest marsh. It was determined from the collected

data that the current duration of inundation within the existing stands of *Spartina* is six hours; this duration has been set as the initial target duration for enhancement activities at elevation 2.5 feet NAVD88.

Assessment of Mitigation Alternatives in Accordance with USACE Hierarchy

The 2020 USACE Mitigation SOP for New England establishes a preference hierarchy for compensatory mitigation, ranking mitigation bank credits as the highest priority, followed by In-Lieu Fee (ILF) mitigation, and Permittee-Responsible Mitigation (PRM). The first preferred option is not available as no tidal wetland mitigation banks exist within the service area. In this case, ILF would be the second in the hierarchy. However, federal regulations under 33 CFR Part 332 allow PRM to be selected over ILF if it can be demonstrated to be more ecologically appropriate, sustainable, and likely to succeed in replacing lost aquatic resource functions. The mitigation proposed in this plan provides stronger ecological benefits tailored to the affected watershed by the enhancement of 28.5 acres of tidal salt marsh complex and the creation of 3.61 acres of tidal salt marsh complex. The work directly addresses the specific resource needs of the historically impacted ecosystem and includes a robust long-term financial and site protection strategy that ensures the mitigation's enforceability and sustainability.

The enhancement and creation of tidal wetlands at the Airport is designed to restore the Morris Creek and Tuttle Brook tidal wetland system, a watershed that has been significantly degraded by altered hydrology, freshwater intrusion, and invasive species encroachment. ILF mitigation does not ensure that compensatory restoration will occur within the same hydrologic subunit, meaning that mitigation efforts could be implemented elsewhere within the ILF service area, potentially in a location that does not share the same functional deficiencies as the impacted wetlands. By contrast, the 28.5-acre enhancement and 3.61-acre creation of tidal wetlands specifically targets the hydrological imbalances in this tidal marsh system through controlled inundation, the removal of invasive *Phragmites australis*, and the promotion of native *Spartina alterniflora*. The planned tide gate modifications will increase tidal flushing, increase salinity levels, and improve conditions for estuarine-dependent species. These targeted hydrologic interventions are critical to ensuring the long-term resilience of the wetland system. Connecticut DEEP and other state and regional conservation agencies have long identified the restoration of tidal marsh function as a priority for coastal resilience, and this project aligns directly with those restoration goals.

In-Lieu Fee mitigation presents additional concerns regarding the reliability and timeliness of functional replacement. ILF programs operate by aggregating funds from multiple permittees before identifying and implementing restoration projects, which can create a functional lag where wetland losses remain uncompensated for years before a mitigation project is executed. This delay is particularly concerning for tidal wetlands, which are already among the most vulnerable ecosystems due to climate change and sea level rise. By contrast the proposed enhancement and creation of tidal wetlands at Tweed New Haven Airport ensures that mitigation actions commence concurrently with project impacts, eliminating the risk of prolonged ecological deficits. The proposed approach also includes monitoring of site-specific tidal hydrology, allowing for adaptive management that responds in real-time to observed ecological changes. The restoration strategy is based on direct, quantitative measurements of salinity levels, tidal exchange, and vegetation response, ensuring that the mitigation meets its performance standards and remains functionally successful over time. These detailed hydrologic assessments provide a higher level of scientific certainty than ILF mitigation, where functional equivalency to the impacted wetlands may not be directly measured or managed.

One of the primary advantages of ILF mitigation from a regulatory standpoint is that it shifts long-term responsibility for mitigation success to a third-party provider, reducing the administrative burden on the permittee. However, the Tweed New Haven project has been structured to address these concerns by including dedicated financial assurances, legal site protections, and a rigorous performance monitoring framework that meet or exceed USACE's requirements for long-term enforceability. The project will include secured funding mechanisms to support ongoing invasive species management, vegetation monitoring, and adaptive management measures for a period of no less than five years, ensuring sustained ecological function. In addition, the mitigation site will be legally protected in perpetuity through a recorded deed restriction, preventing future land conversion and securing the site's ecological integrity over the long term. The monitoring plan requires annual performance assessments, with specific ecological success criteria such as achieving a minimum of 85% *Spartina alterniflora* cover and no more than 15% *Phragmites australis* presence, ensuring that restoration goals are met through proactive corrective actions if necessary. Hydrological monitoring of water levels, salinity, and tidal connectivity will further support compliance with the plan objectives, providing a level of regulatory oversight and accountability equivalent to or exceeding that of an ILF program.

Proposed Mitigation Work Plan

The Mitigation Project will enhance 28.5 acres of tidal salt marsh complex within existing *Phragmites*-dominated marsh areas by increasing the depth and duration of inundation of tidal water within these marshes. The enhancement objectives will be primarily achieved by modifying the operational procedure of the existing tide gate. By increasing the sluice gate opening height during normal conditions and adjusting the timing of gate closures, the tide gate will allow for greater tidal exchange and prolonged inundation of brackish water upstream. This change will create favorable conditions for *Spartina alterniflora* growth while suppressing *Phragmites australis*. The storm event / wet weather operations procedure of the tide gate will remain unchanged, ensuring flood prevention through the use of the Watershed Drain Mode when severe weather is forecast. Opportunities to reduce drawdown timing and enhance tidal exchange 24 to 48 hours prior to forecasted wet weather events may also be evaluated, as conditions allow. This operational approach balances habitat enhancement goals with ongoing flood control requirements.

The Mitigation Project will also include the creation of 3.61 acres of tidal salt marsh complex within upland areas of the Airport property. This process will involve excavating existing upland material, ensuring tidal flow through the creation of tidal channels that connect with existing channels, placing a clean, sandy planting medium, and grading the site to appropriate elevations for tidal inundation—the upper quarter of the tidal cycle. The newly created marsh will be planted with native salt marsh vegetation, including *Spartina alterniflora* in low marsh zones, to support habitat function and ecological resilience.

Mitigation Monitoring

Mitigation project monitoring will be completed to determine if the project meets its Performance Standards and if measures are necessary to ensure that the Project accomplishes its objectives, according to the requirements of 33 C.F.R. § 332.6. Refer to the Section 5 Monitoring Plan for more information.

Mitigation Performance Standards – Enhancement Areas

The proposed Performance Standard is 85% coverage by *Spartina alterniflora* within the vegetated portions of the marsh complex. The proposed mitigation focuses on enhancing a tidal low marsh complex, comprised mostly of areas vegetated by *Spartina alterniflora,* with the remainder of the mitigation wetlands being comprised of mudflats and tidal channels.

Ideal low marsh systems in New England typically feature at least 70% *Spartina alterniflora* coverage (Association to Preserve Cape Cod (APCC), 2024). Given that the proposed mitigation wetland system experiences shorter durations of inundation than would a natural system due to regulation of water levels by the tide gate, it is anticipated that 50% of the total low marsh system will be capable of maintaining vegetation under these conditions. Mudflats and tidal channels will make up the remainder of the low marsh system and will remain essential components within the marsh complex by supporting habitat diversity and ecological function.

The following Performance Standards define the success criteria for the enhancement of **28.5 acres** of the tidal wetland Mitigation Project area:

- At least 85% coverage by *Spartina alterniflora* throughout the vegetated areas within the tidal low marsh complex.

- No greater than 15% coverage of *Phragmites australis* (common reed) within the 28.5 acres of salt marsh complex, requiring elimination of small patches and aggressive treatment of larger infestations, with progress documented throughout the monitoring period.

Mitigation Performance Standards – Creation Areas

Similar to the Enhancement Areas, the Performance Standard for the Creation Areas is 85% coverage by *Spartina alterniflora* within the vegetated portions of the low marsh complex. Given that the created marsh will be constructed within formerly upland areas, the site will be graded to be within the upper quarter of the tidal cycle to facilitate tidal inundation and support the establishment of *Spartina alterniflora*. To ensure tidal flow, tidal channels will be incorporated throughout the newly created salt marsh areas, enhancing habitat complexity and supporting the ecological function of the marsh complex.

The following Performance Standards define the success criteria for the **3.61 acres** of created salt marsh complex:

- At least 85% coverage by *Spartina alterniflora* within the vegetated areas of the created low salt marsh areas.

- No greater than 15% coverage of *Phragmites australis* within the created salt marsh areas, with targeted removal and management strategies to ensure long-term suppression.

1. Introduction

1.1 Project Information

The Applicants are entering into Permittee Responsible Mitigation to mitigate for the impact of proposed activities as a result of improvements at the Tweed New Haven Airport. This Mitigation Plan has been prepared in accordance with the New England District Compensatory Mitigation Standard Operating Procedures dated December 29, 2020 (USACE, 2020) and in accordance with the requirements of 33 C.F.R. Parts 325 and 332, inclusive.

The Proposed Project activities will impact 9.31 acres of inland freshwater wetlands jurisdictional for the State of Connecticut and 5.50 acres per USACE. The Applicants propose to enhance **28.5 acres** of intertidal wetland enhancement and **3.61 acres** of intertidal wetland creation within the Project Site through Permittee Responsible Mitigation. The mitigation ratio for the enhancement work is 5:1 and the ratio for the creation work is 1:1 based on communication with the CT Department of Energy and Environmental Protection (CT DEEP) and the US Army Corps of Engineers (USACE), refer to correspondence in Appendix C.

The Mitigation Site wetlands for enhancement are tidal wetlands located to the north, south, east and west of the proposed Project Site. As the existing wetlands on the Project Site are significantly degraded, being stormwater fed and dominated by invasive species, it is reasonable to conclude that the enhanced tidal wetlands will have improved functions and values as compared to the existing wetlands.

The proposed Mitigation Project will increase the depth and duration of saline conditions within the Mitigation Site enhancement wetlands, with the goal of encouraging growth of *Spartina alterniflora* within the low marsh, and concurrent reduction or eradication of the dense stands of *Phragmites* that are present. A more saline environment encourages long-term salt marsh enhancement by fostering the recovery of low salt marsh intertidal habitats, promoting the growth of *Spartina alterniflora*, and providing greater resilience against invasive species encroachment than freshwater wetlands. *Phragmites* is less tolerant of prolonged flooding and increased salinity, which inhibits its growth, while *Spartina alterniflora* is more tolerant of these conditions (Chambers et al., 1999).

In addition to the **28.5 acres** of enhanced intertidal wetlands, the Proposed Project will create **3.61 acres** of new salt marsh complex within previously upland areas. This newly created marsh will further support the overall mitigation strategy by increasing the extent of functional tidal wetland habitat within the site. Designed to integrate with the surrounding enhanced wetlands, the created marsh will be graded to within the upper quarter of the tidal cycle, planted with native salt marsh vegetation, and connected to existing tidal channels to ensure proper hydrology.

The following sources were used to map the existing wetlands at the site to inform this Mitigation Plan: an FHI Studio 2021 delineation (FHI 2021) and a McCue Environmental 2024 delineation (McCue 2024). The existing Proposed Project site information pertains to the wetland areas impacted by the Proposed Project activities and was primarily informed by the FHI Studio 2021 delineation report (see Appendix B1). The Mitigation Project site information pertains to the wetland areas to be restored and was primarily informed by the McCue Environmental 2024 delineation report (see Appendix B2). The FHI Studio 2021 delineation report offers a comprehensive investigation of the existing conditions, while the McCue Environmental 2024 delineation report reflects the mitigation project wetlands. The Proposed Project Site

and Mitigation Project Site wetlands are shown on Figure 1 Project Site wetlands mapped by FHI Studio and Figure 2 Mitigation Site wetlands mapped by McCue Environmental respectively.

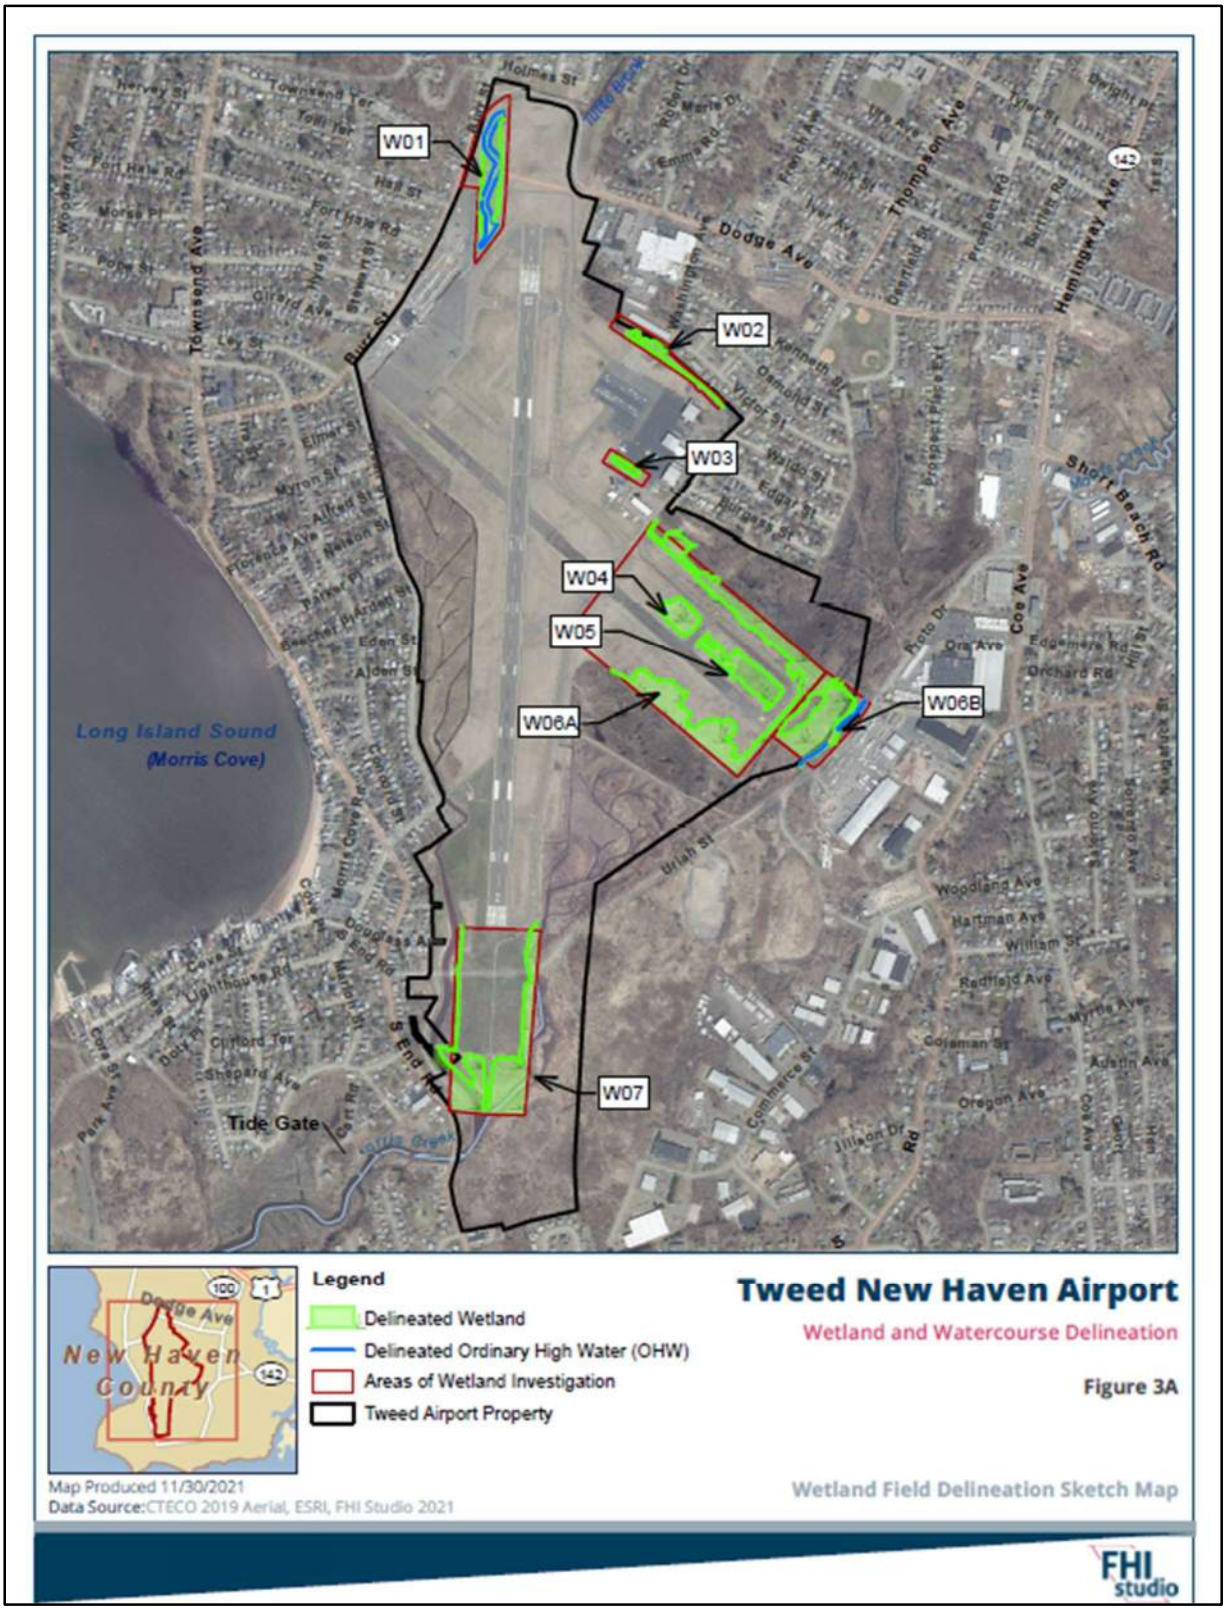

Figure 1 Project Site wetlands mapped by FHI Studio

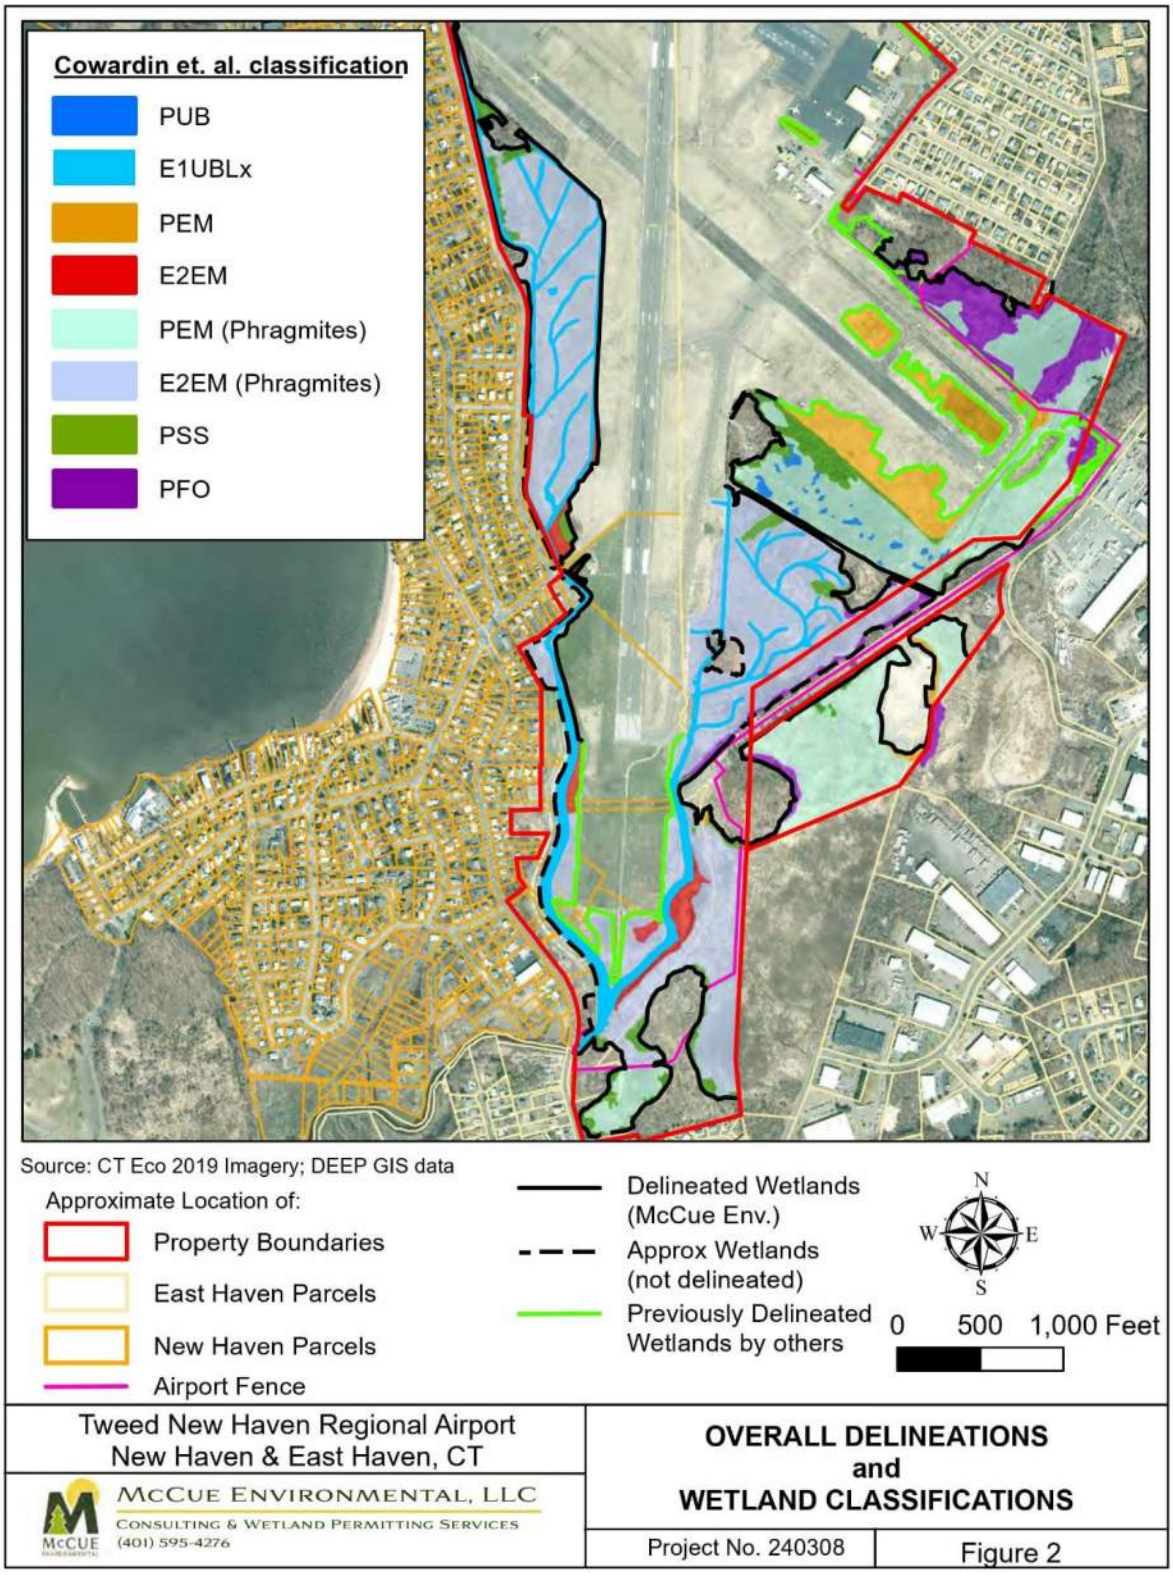

Figure 2 Mitigation Site wetlands mapped by McCue Environmental

1.2 Applicants' Efforts to Date

The Tweed New Haven Airport and FAA issued an Environmental Assessment for the Runway 02-20 Extension and Terminal Expansion Program in December 2023. During development of that NEPA analysis document, initial coordination with respective agencies regarding wetland impacts associated with the project resulted in the acknowledged need for wetland mitigation to offset the proposed unavoidable freshwater wetland impacts. There was agreement during those discussions that tidal wetland mitigation to enhance the historically altered tidal marsh areas within the airport property boundary would be acceptable as mitigation to offset freshwater wetland impacts. As continuation of that coordination, monthly meetings with representatives from USACE, CT DEEP and FAA began in February 2024 to provide updates on impact minimization and Mitigation Plan development- refer to Appendix C for relevant regulatory communication.

Wetlands that were identified for potential impact and to be potentially used for mitigation were delineated by McCue Environmental to supplement the delineations done by FHI Studios during the NEPA EA development, with functions and values assessments also completed, such that all wetlands within the airport boundary have been field delineated, assessed and assigned a Cowardin classification. See Appendix B and the design plans attached.

An extensive data collection effort was conducted within the salt marsh that will be targeted for enhancement to provide quantitative support for the proposed Mitigation Plan- refer to Sections 3 and 7 and Appendix D for additional information on that effort.

1.3 Prior Mitigation On-Site

Historically, mitigation has occurred within the airport boundary to address permit conditions from CTDEEP/OLISP permits #200003049-KZ, IW-2000-116, DIV-200003052 and WQC-20000305 within approximately 57 acres of tidal marsh on the west side of the airport along Dean Street and the east side of the airport south of Pig Farm Road as depicted on Figure 3, that consisted of:

- Installation of approximately 6,700 linear feet of tidal channels that increased the functions of the restoration areas;
- Modification of the tide gate to allow for tidal flows up to 3.5' NGVD; and
- Spraying, cutting and mulching of *Phragmites* within the tidal restoration areas.

Figure 3 Prior Mitigation On-Site

In 2013, to address impacts to freshwater and tidal wetlands due to installation of a wildlife fence and installation of cross-culverts under Pig Farm Road, CTDEEP/OLISP Certificate of Permission (COP) #201304084-KZ included mitigation within the east side tidal wetland south of Pig farm Road by:

- Installing 1,560 linear feet of new approximately 10’ wide tidal finger channels; and
- Tidal wetland enhancement and restoration of 3.8 acres of existing tidal wetlands by spraying, cutting and mulching *Phragmites.*

After reviewing the site’s permitting history, CT DEEP determined that the proposed 28.5 acres of tidal wetland enhancement may be credited toward mitigation at a 5:1 ratio, offsetting 5.7 acres of impact. CT DEEP also determined that any remaining impact areas must be addressed through tidal wetland creation at a 1:1 ratio, resulting in an overall increase in wetland area. Additional details can be found in the CT DEEP memo dated February 21, 2025, included in Appendix C: Regulatory Communication.

2. Proposed Project (Impact Site) Information

2.1 Existing Watershed & Hydrology

The proposed activities lie within Connecticut's South Central Shoreline watershed, specifically in the Farm River local basin subregion.[1] The surrounding water bodies include Morris Creek and Tuttle Brook. Morris Creek flows through a tide gate downstream of the Proposed Project Site before draining into Long Island Sound. The hydrology at the Proposed Project Site is affected by the existing tide gate, which regulates flow both into and out of the Airport's intertidal wetlands.

According to the CT DEEP Eco Viewer,[2] the 12-digit Hydrologic Unit for the Watershed Boundary Dataset for the Proposed Project is: HUC12: 020302030000; Name: Long Island Sound Deep.

2.1.1 Wetlands

The existing salt marsh complex at the Proposed Project site includes a wetland system with a network of excavated channels and marsh vegetation that is predominantly dominated by *Phragmites australis* (common reed), an invasive species that thrives in altered and low-salinity conditions. There is a limited expanse of mudflat habitat within the existing marsh complex.

The existing wetlands at the Project Site were delineated and characterized by FHI Studio in 2021 (FHI 2021), McCue Environmental (McCue 2024), and supplemented with information publicly available from the U.S. Fish and Wildlife Service (USFWS) National Wetlands Inventory mapper (NWI). The Cowardin classification system for wetland and deepwater habitats in the United States was used to characterize the wetlands.

According to the FHI 2021 delineation, seven wetlands were delineated within the Project Site at the Airport, six of which were determined to be inland wetlands, and one which is tidal, as depicted in Figure 1 and Figure 2. These wetlands provide various functions, including sediment retention, nutrient removal, and flood flow alteration. Some of the inland wetlands within the Proposed Project Site are constructed and linked to the Airport's drainage systems.

The wetland systems primarily drain as follows:

- Wetland 1 drains into Tuttle Brook, a tributary to Morris Creek, which ultimately leads to Long Island Sound.
- Wetlands 2-5 drain into Morris Creek, either through direct surface water or groundwater discharge, similarly leading to Long Island Sound.
- Wetland 7 is tidally influenced and drains directly into Morris Creek and Tuttle Brook, both of which are connected to Long Island Sound.

[1] CT DEEP Subregional Drainage Basin Set, https://geodata.ct.gov/maps/66de3e3bf63e456ba32c12643f0d8bdc/about

[2] CT Environmental Conditions Online, https://cteco.uconn.edu/viewer/index.html?viewer=advanced

The following is a summary of the observed Proposed Project Site wetland systems:

1. **Wetland 1**:

    - Located at the northwestern limit of the Airport, Wetland 1 includes a reach of Tuttle Brook and associated vegetated wetlands. The brook runs through culverts under roads and service areas, and the surrounding wetlands are dominated by persistent emergent vegetation like broadleaf cattail (*Typha latifolia*) and common reed (*Phragmites australis*). It provides functions such as sediment retention, nutrient removal, and wildlife habitat.

2. **Wetland 2**:

    - Situated at the northeastern boundary of the Airport near the General Aviation parking area. This wetland includes a red maple swamp adjacent to a ditched wetland system. It is seasonally flooded and dominated by stands of *Phragmites*. Functions include sediment retention and nutrient removal.

3. **Wetland 3**:

    - A small, shallow basin wetland located between the Air Traffic Control Tower and the East Ramp. It mainly consists of palustrine emergent vegetation and collects runoff. The vegetation includes rushes and grasses, providing limited habitat but retaining water and sediments.

4. **Wetland 4**:

    - This is a constructed shallow drainage area located near Runway 32 and Taxiways C and H. It consists of palustrine emergent vegetation and is primarily maintained as a mowed area. Its primary hydrological function is collecting runoff from the surrounding impervious surfaces. The wetland has limited ecological value.

5. **Wetland 5**:

    - Similar to Wetland 4, Wetland 5 is also a shallow drainage area collecting sheet flow runoff. It is dominated by emergent vegetation and maintained as a lawn. Functions include stormwater retention and sediment control.

6. **Wetland 6**:

    - This wetland has two distinct portions: 6A is a mowed palustrine emergent wetland, while 6B is a forested wetland bisected by Morris Creek. Wetland 6A has low ecological value due to regular mowing, while 6B, which includes more diverse vegetation and hydrology, has slightly higher ecological value.

7. **Wetland 7**:

- A large tidal wetland dominated by *Phragmites*. It is influenced by tidal waters from Morris Creek and Tuttle Brook and provides significant habitat for estuarine species. This wetland also serves important functions in flood flow alteration and fish/shellfish habitat.

In general, these wetlands provide various ecological functions within the salt marsh complex including water retention, nutrient removal, and wildlife habitat, although the more disturbed wetlands (such as Wetlands 4 and 5) have compromised ecological value.

2.1.2 Tide Gates

The tide gate structure, located along a portion of Morris Creek approximately ¼ mile downstream of the airport, consists of two sluice gates and a flap gate. The sluice gates are situated on either side of the flap gate. The sluice gates are set into a concrete frame with 10' x 6' openings in the concrete face on the downstream ocean side, and 10' x 6' openings in the concrete face on the upstream side. The flap gate consists of a timber frame gate with three flexible rubber flap openings with a combined 10' x 6' opening that allows flow from upstream to pass freely and inhibits flow from the downstream ocean side. Refer to Figure 4 Tidal and tide gate elevation.

The inverts of the sluice gates are at -5.4' NAVD88, the inside top of frame on the ocean side is at elevation 0.2' NAVD88. The tidal cycle in this location ranges from -3.4' NAVD88 at Mean Low Water (MLW) to elevation 2.8 NAVD88 at Mean High Water (MHW).

The sluice gates are equipped with an automated SCADA system that allows for both automated and manual remote operation of the tide gates. The tide gates are currently operated to preemptively prepare for storm events to avoid flooding in the Morris Creek area under Watershed Drain Mode. The tide gate is operated in AUTO Mode during periods of normal operation, and Watershed Drain Mode in advance of a storm event.

During AUTO Mode, the left and right sluice gates are kept open to a fixed height at elevation -4.4 feet NAVD88, twelve (12) inches above the invert elevation of -5.4' NAVD88. This allows the tidal wetland systems to outlet freely during low tide conditions and prevents excessive rise in water surface elevations in the tidal wetland systems during the rising tidal cycle. Under normal operational procedures, water levels are managed to reach elevations of approximately 2.1 feet NAVD88 at a monitoring station located immediately upstream of the tide gate structure.

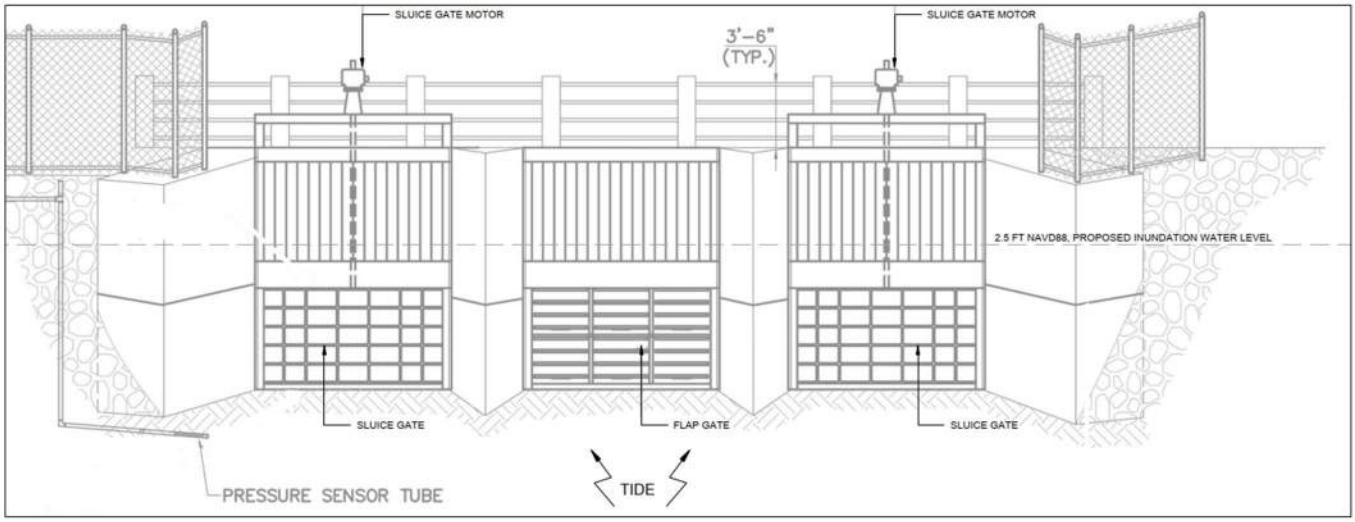

Figure 4 Tidal and tide gate elevation.

During periods of severe weather, particularly when heavy rain events are forecasted, the sluice gates are operated in Watershed Drain Mode. Watershed Drain Mode is typically initiated at least 48 hours before the onset of the severe weather event. Opportunities to reduce drawdown timing and enhance tidal exchange 24 to 48 hours prior to forecasted wet weather events may also be evaluated, as conditions allow. During this time, the Watershed Drain Mode is activated by operational staff to effectively reduce the risk of flooding by preemptively lowering the water levels upstream of the tide gate. To accomplish this, the gate is opened to 1.5 feet above the invert, or elevation -3.9 feet NAVD88, allowing the creek to drain excess water to Long Island Sound. A crucial step is to subsequently close the sluice gates before the next tidal cycle begins to rise to prevent seawater from flowing upstream into the creek.

If the tide gate system fails to operate remotely or if any faults occur that prevent automated operation either before, during, or after a storm event, manual drainage procedures must be implemented to ensure water management continues.

Once the storm event has subsided and water levels begin to stabilize, the tide gate system is returned to AUTO Mode to restore normal operations. In some cases, it is necessary to manually deactivate Watershed Drain Mode if it does not automatically revert to normal function.

2.2 Existing Soils

The soils at the Proposed Project Site were determined using the USDA Web Soil Survey[3] (WSS), as depicted in Figure 5 Soil map of Proposed Project Site.

The soils are predominantly poorly to very poorly drained, which is typical of wetland environments that support hydrophytic vegetation and have limited drainage capacity. Soils such as Walpole sandy loam, Scarboro muck, and (disturbed soils with fill materials) dominate the Airport site, indicating a history of human alteration and natural wetland conditions. These soils are indicative of saturated conditions that support wetland ecosystems making them highly suitable for salt marsh habitat enhancement. The

[3] USDA NRCS, Web Soil Survey, https://websoilsurvey.nrcs.usda.gov/app/

majority of the site is comprised of Udorthents Urban Land, indicating that the area has been highly disturbed and filled. The following is a summary of the predominant soils found in each wetland area.

- **Wetland 1**: Walpole sandy loam and Scarboro muck, classified as poorly to very poorly drained soils.
- **Wetland 2**: Walpole and Aquents soils with poorly drained fill materials.
- **Wetland 3**: Aquents, poorly drained fill materials supporting hydrophytic vegetation.
- **Wetland 4 and 5**: Aquents, similarly consisting of poorly drained fill materials.
- **Wetland 6**: Forested and scrub-shrub wetland with a combination of poorly drained fill materials.
- **Wetland 7**: Aquents, with tidal influence and poorly drained materials.

Figure 5 Soil map of Proposed Project Site.

2.3 Existing Vegetation

Existing vegetation at the Proposed Project Site was evaluated during the wetland delineation and ecological community mapping activities completed by FHI Studios in 2021, with information presented in FHI Studio's Wetland Delineation Report dated January 2022. The following vegetation was observed within the wetlands at the Proposed Project Site.

- **Wetland 1**: Dominated by persistent emergent vegetation such as *Phragmites australis*, *Typha latifolia* (broadleaf cattail), and *Onoclea sensibilis* (sensitive fern).
- **Wetland 2**: Characterized by a mix of *Acer rubrum* (red maple), *Nyssa sylvatica* (black gum), and *Quercus palustris* (pin oak), with stands of *Phragmites australis* dominating the emergent wetland portions.
- **Wetland 3**: Dominated by grasses and sedges such as *Juncus effusus* (soft rush), *Paspalum laeve* (field beadgrass, a native, CT state-threatened species), and *Ludwigia palustris* (water purslane).
- **Wetland 4 and 5**: These wetlands are composed of grasses, rushes, and sedges such as *Juncus effusus* (soft rush), *Paspalum leave* (field beadgrass), and other hydrophytic vegetation.
- **Wetland 6**: Includes a forested portion with *Acer rubrum* (red maple), *Lindera benzoin* (spicebush), and *Vaccinium corymbosum* (highbush blueberry), alongside emergent wetlands dominated by *Phragmites australis* and various sedge species.
- **Wetland 7**: Tidal wetland dominated by *Phragmites australis*, *Spartina alterniflora*, and *Distichlis spicata* (saltgrass).

Paspalum laeve, a state-listed threatened plant species, was identified in multiple wetland areas, including Wetlands 3, 4, and 5. This species is of conservation concern as it is found in only a few locations in Connecticut, mostly within the coastal zone. Refer to the Plant Survey and Protection Plan for the project for additional details.

2.4 Existing Wetlands and Aquatic Resource Quantifications

FHI Studio identified 6 freshwater wetland areas and 1 tidal wetland at the Proposed Project site, as described in the preceding sections and quantified in Table 2. The flagged boundaries were mapped using GPS equipment to capture precise spatial data. Wetland areas were calculated based on the location of the wetland flags using ArcGIS.

Table 2 Wetland impacts at the Proposed Project Site.

Wetland #	NWI Classification Code	Impacts CTDEEP (acre)	Impacts USACE (acres)
Wetlands 4, 5 and 6	PEM2J	8.74	4.94

Wetland 6	PSS	0.02	0.01
	PEM Phragmites	0.54	0.54
	PFO1E	0.01	0.01
Total		9.31	5.50

Hydrogeomorphic (HGM) Classification:

The Hydrogeomorphic (HGM) Classification for the wetlands is ESTUARINE FRINGE. As informed by "A hydrogeomorphic classification for wetlands,"[4] and defined in "The Development of Wetland Functional Assessment Models,"[5] "ESTUARINE FRINGE wetlands are found near ocean shorelines, and tidal estuaries at the mouths of streams. Similar to LACUSTRINE FRINGE wetlands, they transition into RIVERINE wetland landscapes upstream of the coast. This transition occurs when the wetland hydrology becomes more dominated by the stream hydrograph, and less dominated by tidal fluctuations. Many large, low gradient rivers have tidal influence far inland from the mouth. In such systems the transition from ESTUARINE FRINGE to RIVERINE may occur many miles upstream."

To the best of our assessment, it appears that the entire Proposed Project site consists of wetlands classified as ESTUARINE FRINGE. These wetlands are influenced predominantly by tidal fluctuations associated with their proximity to the estuarine environment of Long Island Sound. It is important to note that the tidal marsh complex is unique in that tidal flows are managed by a tide gate, which regulates hydrological connectivity and salinity levels, creating a distinct environment that differs from a naturally unimpeded tidal marsh system.

National Wetlands Inventory Wetlands Classification:

This section describes the mapped National Wetlands Inventory (NWI) Cowardin wetland classifications at the Proposed Project Site, and the classification assigned to the wetland areas based on information collected during the FHI 2021 field delineation. The Cowardin classification includes letter and number codes that correspond to classification nomenclature. Each of these classifications is further defined by

[4] Brinson, M. M. (1993). "A hydrogeomorphic classification for wetlands," Technical Report WRP-DE-4, U.S. Army Engineer Waterways Experiment Station, Vicksburg, MS. NTIS No. AD A270 053.

[5] National Association of Wetland Managers, "The Development of Wetland Functional Assessment Models Using the Hydrogeomorphic (HGM) Classification System," https://www.nawm.org/pdf_lib/region_4_training/the_development_of_wetland_functional_assessment_models_using_the_hgm_system.pdf

hydrology, vegetation type, and substrate, allowing for a detailed categorization of wetland systems. The Cowardin system helps in assessing the ecological functions and regulatory status of the wetlands and is widely used by federal agencies like the U.S. Fish and Wildlife Service (USFWS) for wetland conservation and management.

A total of six wetland habitat classes as defined by Cowardin were observed at the Proposed Project Site. A general description of the types of habitat classes that were observed is as follows:

1. **Palustrine (P)**:

    - Refers to inland freshwater wetlands, typically dominated by trees, shrubs, or emergent vegetation. These wetlands are not influenced by tidal waters and are often characterized by non-tidal marshes, swamps, and ponds. Examples include forested wetlands (PFO), emergent wetlands (PEM), and shrub wetlands (PSS).

        - **PEM (Palustrine Emergent)**: Wetlands with herbaceous plants like grasses, sedges, and rushes.

        - **PFO (Palustrine Forested)**: Wetlands dominated by trees like red maple.

        - **PSS (Palustrine Scrub-Shrub)**: Wetlands dominated by shrubs or small trees.

2. **Estuarine (E)**:

    - Wetlands which are found along coastal regions where freshwater mixes with saltwater, such as tidal marshes and mudflats. These wetlands are influenced by tidal action but are protected from the full force of ocean waves.

        - **E2EM (Estuarine Intertidal Emergent)**: Intertidal areas with emergent vegetation such as *Phragmites* or *Spartina*.

        - **E1UBL (Estuarine Subtidal Unconsolidated Bottom)**: Areas below the tide level with a bottom substrate of mud, sand, or gravel, often in tidal creeks.

3. **Riverine (R)**:

    - Riverine systems which are associated with rivers, streams, and creeks, and include the channels and banks of flowing waters. Wetlands in this category are often classified based on water flow and bottom composition.

        - **R2UB (Riverine Lower Perennial Unconsolidated Bottom)**: Channels of rivers or streams with permanent flow and a bottom substrate of mud or sand.

The following describes the Project Site wetlands classified according to these habitat classes, also shown in Table 3 Cowardin Wetland classifications within the Proposed Project Site.

1. **Palustrine Emergent (PEM)**:

- Found in several of the inland wetlands, including Wetlands 1, 3, 4, 5, and 6. These wetlands are characterized by emergent herbaceous vegetation, such as rushes, sedges, and grasses. Wetland 6 also includes a *Phragmites*-dominated emergent area.

2. **Palustrine Forested (PFO)**:

    - Present in Wetland 2 and part of Wetland 6. These wetlands are dominated by deciduous trees such as red maple and include shrub layers of species like spicebush and highbush blueberry.

3. Palustrine Scrub Shrub (PSS):

    - Present in Wetland 6 between PEM and PFO. These wetlands occur in low depressions with apparent high groundwater table and are characterized by shrubs and saplings of red maple, blueberry, spicebush and holly.

4. **Estuarine Intertidal Emergent (E2EM)**:

    - Found in Wetland 7, which is a tidal wetland influenced by saltwater from nearby Morris Creek and Tuttle Brook. The emergent vegetation in this wetland is dominated by *Phragmites australis* and halophytic (salt-tolerant) grasses like *Spartina alterniflora* and *Spartina patens*.

5. **Estuarine Subtidal Unconsolidated Bottom (E1UBL)**:

    - Associated with Wetland 7, this classification refers to the areas of open water with sandy or muddy bottoms in tidal creeks such as Morris Creek and Tuttle Brook. These subtidal areas are part of the estuarine system and are influenced by the tides.

6. **Riverine Lower Perennial Unconsolidated Bottom (R2UB)**:

    - Found in Wetland 1, which includes a reach of Tuttle Brook. This classification describes the riverine system with a bottom substrate of sand and organic material, supporting the hydrology of the surrounding wetlands.

Table 3 Cowardin Wetland classifications within the Proposed Project Site.

Wetland #	NWI Classification Code	Notes
Wetland 1	R2UB2/4, PEM1/5	Tuttle Brook. Riverine Lower Perennial Unconsolidated Bottom and Palustrine Emergent, persistent.
Wetland 2	PFO1Ed, PEM5H	Northeastern Wetland by General Aviation Parking. Palustrine Forested, Broad-leaved Deciduous, seasonally flooded/saturated, ditched, and Palustrine Emergent, *Phragmites*-dominated.
Wetland 3	PEM2J	Mowed Area Between ATC and East Ramp. Palustrine Emergent, nonpersistent, intermittently flooded/saturated.
Wetland 4 & 5	PEM2J	Shallow Drainage Areas. Palustrine Emergent, nonpersistent, intermittently flooded.

Wetland 6	PFO1E, PEM2, PSS	Morris Creek and Mowed Lawn Areas. Combination of Palustrine Forested, Broad-leaved Deciduous, seasonally flooded/saturated, Palustrine Emergent, nonpersistent and Palustrine Scrub Shrub.
Wetland 7	E2EM1/5P, E1UBL	Tidal Wetland. Estuarine Intertidal Emergent, persistent/*Phragmites*-dominated, irregularly flooded, and Estuarine Subtidal Unconsolidated Bottom.

Because the US Army Corps of Engineers (USACE) has determined that PEM wetlands 4 and 5 are not Waters of the United States, the wetland impact that will require permitting under the USACE Individual Permit is 5.50 acres.

2.5 Threatened, Endangered, and Species of Special Concern

The Natural Diversity Database (NDDB) query results for the Proposed Project area were received from the Connecticut Department of Energy and Environmental Protection (DEEP) on May 17, 2024. That review did not include the Mitigation Project areas, which were reviewed under a separate NDDB query. Those results were received on September 26, 2024 (dated September 24, 2024). According to DEEP records, populations of several state-listed species, including plants, fish, and birds, have been documented in the vicinity of the Airport's Proposed Project area. DEEP is tasked with assessing potential impacts on these species as part of the NDDB review.

Based on information received from DEEP, the Proposed Project and Mitigation site may provide potential habitat to endangered and threatened plant species as described below.

Plants: Several plant species were identified in the NDDB review. These include *Cirsium horridulum* (yellow thistle), *Leptochloa fusca* ssp. *Fascicularis* (salt pond grass), *Paspalum leave* (field paspalum), *Pedicularis lanceolata* (swamp lousewort), *Krigia biflora* (two-flowered cynthoa), *Plantago virginica* (hoary plaintain), and *Liatris novae-angliae* (New England blazing star).

Fish: Three fish species of special concern were identified: the sand tiger shark, Atlantic seasnail, and the radiated shanny. Consultation with DEEP's fisheries biologist has determined that the project will not affect these listed species (see Appendix C Regulatory Communication).

Birds: Grassland birds, including the grasshopper sparrow (endangered), eastern meadowlark (threatened), and bobolink (special concern), have been documented in the vicinity of the Airport Proposed Project area. Their sensitive periods during breeding and nesting (May to August) are highlighted, and the need for habitat management is emphasized. The DEEP program staff is currently working with the Applicants and their consultants to address impacts from the Proposed Project.

The DEEP response requested that the following be completed:

- Conduct species-specific plant surveys and submit detailed reports, including habitat descriptions, population numbers, and mitigation plans for any identified state-listed species.

- Finalize a Grassland Bird Habitat Mitigation Plan[6] before any further decisions on the Mitigation project, ensuring protection of their habitat during sensitive periods. DEEP indicated that a final determination for the Mitigation project will be delayed until mitigation measures for grassland birds are finalized.

A habitat assessment for the state threatened and endangered species was completed to determine the habitat requirements, suitability of the existing habitat to support these species, and other habitat characteristics that may be pertinent to the Mitigation Project. These are presented in Table 4 Habitat assessment for T&E species within the Proposed Project Site and/or in its vicinity.

Table 4 Habitat assessment for T&E species within the Proposed Project Site and/or in its vicinity.

Common Name	Scientific Name	Habitat Description	Flowering/ Reproducing	Breeding/ Nesting/ Fledgling Season	Habitat Potentially Present Onsite	Federal Status based on NDDB response
Yellow thistle	*Cirsium horridulum*	Coastal grasslands, airports, open-canopy trails, inner salt marsh borders, forest edges bordering salt marshes	Blooms June-July	N/A	Yes	State Endangered
Salt pond grass	*Leptochloa fusca ssp. fascicularis*	Coastal, brackish ponds, salt marsh borders, sandy depressions in coastal grasslands	Blooms/Fruits Aug-Nov	N/A	Yes	State Endangered
Field paspalum	*Paspalum laeve*	Hydric to moderately drained fields, grasslands, floodplains, vernal pools, utility ROWs, coastal grasslands	Fruits August-October	N/A	Yes	State Threatened
Swamp lousewort	*Pedicularis lanceolata*	Moist fields, swamp edges, wet meadows, stream edges, fresh tidal wetlands	Blooms mid-August-September	N/A	Yes	State Threatened
Two-flowered cynthia	*Krigia biflora*	Dry to wet meadows, fields, rocky woods, roadsides	Blooms June	N/A	Yes	State Threatened
Hoary plantain	*Plantago virginica*	Dry, rocky or sandy soils in pastures, grasslands, roadsides, traprock ridges	Blooms May-June	N/A	Yes	State Special Concern

[6] Note that the Applicants' Mitigation Plan for the grassland bird habitat has been developed as a separate document from this Mitigation Plan, which addresses impacts to wetland habitat at the Airport.

New England blazing star	*Liatris novae-angliae*	Sandplains, dry fields, rocky outcrops, roadsides	Blooms August-September	N/A	Yes	State Special Concern
Grasshopper sparrow	*Ammodramus savannarum*	Large patches of grasslands (30 acres or more)	N/A	May 1-Aug 30	Yes	State Endangered
Eastern meadowlark	*Sturnella magna*	Large patches of grasslands (15 acres or more)	N/A	May 1-Aug 15	Yes	State Threatened
Savannah sparrow	*Passerculus sandwichensis*	Large patches of grasslands (10 acres or more)	N/A	April 1-Aug 30	Yes	State Special Concern
Bobolink	*Dolichonyx oryzivorus*	Large patches of grasslands (5 acres or more)	N/A	May 1-Aug 30	Yes	State Special Concern

2.6 Existing Wetlands Functions and Values Assessment

Wetland functions and values were documented in accordance with guidelines from the United States Army Corps of Engineers *Highway Methodology Supplement*.[7] The following sections provide a summary of the Wetland Functions and Values and the documented results Functions and Values for the Airport site wetlands.

2.6.1 Existing Wetlands Functions and Values

Wetland functions are the properties or processes of a wetland ecosystem that aid in promoting an equilibrium in the wetland and surrounding environment. Wetland functions relate to the ecological significance of wetland properties without regard to subjective human values, and to the elements 1 through 8 on the following list. Values are the societal benefits resulting from one or more of the functions and the physical characteristics associated with a wetland, incorporated into elements 9 through 13 on the following list.

1. **Groundwater Recharge/Discharge -** The potential for a wetland to act as a source of groundwater recharge and/or discharge. Recharge describes the potential for the wetland to contribute water to an underlying aquifer. Discharge relates to the potential for the wetland to serve as a source of groundwater transfer to the surface.
2. **Flood-flow Alteration -** The effectiveness of the wetland to reduce flood damage by attenuation of floodwaters for an extended period following heavy precipitation and runoff events.
3. **Fish and Shellfish Habitat -** The ability of the seasonal or permanent waterbodies associated with the wetland to provide habitat for fish and shellfish.
4. **Sediment/Toxicant/Pathogen Retention -** The ability to reduce or prevent the degradation of water quality. It relates to the effectiveness of the wetland as a trap for sediments, toxicants, or pathogens.
5. **Nutrient Removal/Retention/Transformation -** The ability to prevent excess nutrients from entering aquifers or surface waters such as ponds, lakes, streams, rivers, or estuaries and

[7] USACE, The Highway Methodology Workbook Supplement, https://www.nae.usace.army.mil/Portals/74/docs/regulatory/Forms/HighwaySupplement6Apr2015.pdf

causing adverse effects.

6. **Production Export (Nutrient) -** The ability to produce food or usable products for humans and other organisms.
7. **Sediment/Shoreline Stabilization -** The ability to effectively stabilize streambanks and shorelines against erosion.
8. **Wildlife Habitat -** The effectiveness of the wetland to provide habitat for various types and populations of animals typically associated with wetlands and the wetland wedge. Resident and migrating species are considered along with the potential for any state or federally listed species occurring within the target wetland.
9. **Recreation -** The effectiveness of the wetland and associated watercourses to provide recreational opportunities such as boating, fishing, hunting, and other passive recreational activities. Consumptive activities consume or diminish the plants, animals, or other resources that are intrinsic to the wetlands whereas non-consumptive activities do not.
10. **Education/Scientific Value -** The effectiveness of the wetland as a site for an "outdoor classroom" or as a location for scientific research.
11. **Uniqueness/Heritage -** The effectiveness of the wetland or its associated waterbodies to produce certain special values. Special values may include such things as archaeological sites, unusual aesthetic quality, historical events, or unique plants, animals, or geologic features.
12. **Visual Quality/Aesthetics -** The ability to provide pleasing or unique visual and aesthetic qualities.
13. **Threatened or Endangered Species Habitat -** The effectiveness of the wetland or associated waterbodies to specifically support threatened or endangered species.

The USACE developed a list of "Qualifiers" for each of the 13 wetland functions and values. Qualifiers include observed vegetation conditions, hydrologic conditions, size, adjacent area conditions, and the availability of public access, among several other wetland characteristics.

2.6.2 Existing Wetlands Functions and Values Assessment

For each of the wetland functions and values described in the previous section, FHI Studio reviewed and evaluated applicable criteria listed by the USACE. The resulting summary of wetland functions and values is provided in Table 5 below.

Table 5 Summary of Project Site wetland functions and values.

Wetland	Groundwater Recharge/ Discharge	Flood flow Alteration	Wildlife Habitat	Sediment/Toxicant Retention & Nutrient Removal	Uniqueness/ Heritage
Wetland 1	Significant due to connection with Tuttle Brook	High, storing and conveying floodwaters	Moderate to high, diverse riverine habitats	High, filters pollutants before reaching Tuttle Brook	–

Wetland 2	Moderate, due to groundwater-fed ditches	–	Moderate, influenced by urbanization	Moderate to high, especially in *Phragmites* areas	Presence of *Paspalum laeve* elevates value
Wetland 3	Low to moderate, collects surface runoff	–	Low to moderate, supports *Paspalum laeve*	Moderate, acts as a small catchment area	–
Wetlands 4 & 5	Limited, shallow and regularly mowed	–	Low, though *Paspalum laeve* is present	Moderate, filters runoff from runways and taxiways	*Paspalum laeve* presence significant
Wetland 6	Moderate, fed by surface and groundwater	–	Moderate to high, diverse hydrophyte communities	High, filters pollutants from Morris Creek	Presence of *Paspalum leave,* a CT-threatened wetland species
Wetland 7	–	High, mitigates floods due to tidal nature	High, supports halophytes and estuarine wildlife	High, filters tidal water through extensive vegetation	High, tidal marsh system in urban setting

2.6.2.1 Groundwater Recharge and Discharge

Groundwater recharge/discharge is a suitable although not a principal function of the Airport site wetlands. The presence of poorly drained soils and extensive urban development throughout the Airport site reduces the likelihood of groundwater exchange across the site as a whole.

The limited groundwater recharge and discharge potential exists throughout the Airport site wetlands, as described below.

- **Wetlands 1, 3, 4, and 5** have groundwater recharge potential, especially in areas where high groundwater tables and mowed lawn areas increase recharge. Wetland 3's catch basin also regulates the water table, promoting this function.
- **Wetland 2**: Provides limited groundwater recharge.
- **Wetland 6**: The portions of Wetland 6A (mowed lawn) have low recharge/discharge potential, but the 6B section, with forested and scrub-shrub wetlands, contributes moderately to groundwater discharge.
- **Wetland 7**: Although tidal, Wetland 7 contributes to groundwater recharge due to its hydrological connection to Morris Creek.

2.6.2.2 Flood-flow Alteration

Flood-flow alteration is listed as a suitable and principal function for the freshwater inland wetlands within the Airport site, although the actual capacity for this function is relatively limited in most areas. Wetland 7, despite being a tidal system, is noted as not having flood-flow alteration as a suitable or principal function.

Wetlands 1 and 7 have the highest theoretical potential for flood-flow alteration due to their connection with Tuttle Brook and Morris Creek, but even these wetlands are somewhat constrained. Wetland 1, located along a relocated reach of Tuttle Brook, benefits from its proximity to the watercourse and surrounding vegetation, but its overall contribution to flood retention is diminished by its highly modified state. Wetland 7 plays a marginal role in absorbing floodwaters from Morris Creek, though its ability to truly buffer significant flood events is limited.

By contrast, Wetlands 2 through 6 offer even more limited flood-flow alteration functions. These wetlands are primarily isolated and poorly connected to larger hydrologic systems, making them less effective for stormwater retention. Wetlands 3, 4, and 5 function as shallow drainage areas designed to collect surface runoff from adjacent airport infrastructure, but their small size and lack of substantial connections to major waterways limit their flood-retention potential. Wetland 6, although slightly more hydrologically complex due to its proximity to Morris Creek, offers only modest flood-flow alteration due to the presence of mowed areas and intermittent flooding. Overall, while some flood-flow alteration is possible, the quality and structure of these wetlands reduce their effectiveness in this role.

2.6.2.3 Fish and Shellfish Habitat

Fish and shellfish habitat is neither a suitable nor principal function of the freshwater inland wetlands on the Airport site, reflecting the generally low-quality habitat these areas provide. These freshwater wetlands lack the necessary characteristics, such as hydrologic connectivity and ecological diversity, to support fish or shellfish populations. In contrast, Tidal Wetland 7 offers some potential due to its estuarine intertidal nature, but it is still a compromised habitat. Although the wetland features unconsolidated bottom areas and irregular tidal flooding, which typically benefit fish and shellfish, the dominance of *Phragmites australis*, an invasive species, reduces the overall ecological quality of the habitat. While native halophytic grasses like *Spartina alterniflora*, *Spartina patens*, and *Distichlis spicata* are present and offer some shelter and nursery grounds, the overall habitat is suboptimal due to the invasive vegetation. Moreover, the presence of unconsolidated bottom areas and tidal flow in Wetland 7 might offer foraging and spawning grounds, but the extent of its suitability is undermined by the wetland's degraded condition. The organic matter and sediment that would typically support a diverse food web are limited by the habitat's compromised state, reducing its effectiveness for resident and migratory fish species. Furthermore, according to the Essential Fish Habitat Mapper from the National Oceanic and Atmospheric Administration (NOAA)[8], no Habitat Areas of Particular Concern were identified within the project area, reinforcing the conclusion that the site offers limited value as fish or shellfish habitat.

2.6.2.4 Sediment/Toxicant/Pathogen Retention

The wetlands within the Airport site are determined to provide sediment/toxicant/pathogen retention as both a suitable and principal function, but this function is performed in the context of low-quality wetlands that are generally degraded and lack ecological complexity. While these wetlands do help capture sediment and filter pollutants, their overall ability to contribute to broader ecosystem health is diminished by poor habitat conditions, invasive species, and human disturbance.

[8] NOAA Fisheries, Essential Fish Habitat Mapper
https://www.habitat.noaa.gov/apps/efhmapper/?page=page_3

- Wetlands 1, 2, 3, 4, and 5 demonstrate high sediment retention primarily because of their locations near impervious surfaces such as runways and taxiways, which generate runoff. These wetlands act as basic traps for sediment and pollutants but are heavily influenced by the surrounding airport infrastructure. Although they capture runoff, their artificial or disturbed nature limits their overall ecological value. In natural wetland systems, diverse vegetation helps stabilize sediments over time, and a complex hydrologic regime allows for better sediment processing and long-term storage. In contrast, the existing wetlands may lack the capacity to stabilize and retain sediment over extended periods, making them less effective in maintaining long-term sediment retention compared to healthier, more biodiverse wetlands.
- Wetland 6B offers moderate sediment retention in its scrub-shrub and forested portions, but its effectiveness is limited by the presence of mowed areas and intermittent flooding. While it can trap some sediment from surface runoff, the degraded condition of much of the wetland reduces its capacity to perform this function effectively compared to more natural, undisturbed wetlands.
- Wetland 7 shows high sediment retention, particularly in its *Phragmites*-dominated zones and estuarine areas. However, despite its capacity to retain sediment due to tidal influences and unconsolidated bottom areas, the dominance of the invasive *Phragmites australis* reduces the ecological quality of the wetland, making it less effective in supporting broader wetland functions. The invasive species limits the diversity of habitat and natural processes, and although it may physically retain sediment, the wetland's overall health and ecological function remain compromised.

In conclusion, while the wetlands on the Airport site do perform the function of sediment/toxicant/pathogen retention, this function is largely the result of disturbed, artificial, or degraded conditions, limiting the wetlands' value beyond their basic role in filtering runoff from the surrounding infrastructure. Their capacity to contribute to ecosystem resilience and water quality improvement is hindered by poor habitat quality and limited biodiversity.

2.6.2.5 Nutrient Removal/Retention/Transformation

Nutrient removal has been identified as both a principal and suitable function for all wetlands on the Airport site, though the overall effectiveness varies due to the poor quality and degraded conditions of many of these wetlands. While these wetlands do capture and process nutrients, their artificial or disturbed state, dominated by invasive species and limited native vegetation, diminishes their overall ecological value.

- Wetland 1, located along Tuttle Brook, features emergent vegetation such as *Phragmites australis* and *Typha latifolia* (broadleaf cattail), which are effective in nutrient uptake. However, the dominance of invasive *Phragmites* reduces the quality of the habitat and limits its broader ecological benefits, even though nutrient removal remains a function of this wetland.
- Wetland 2, a red maple swamp, processes nutrients effectively due to seasonal flooding and emergent vegetation like *Phragmites australis* and *Acer rubrum*. The small channel system and proximity to developed areas, which likely contribute nutrient-rich runoff, make this wetland suitable for nutrient removal. However, the dominance of *Phragmites* and the surrounding development decrease the overall quality of nutrient processing.
- Wetland 3 serves as a shallow basin wetland with emergent species like soft rush and water purslane, enhancing its ability to retain water and capture nutrients. While it does perform nutrient removal, its isolated nature and collection of runoff from impervious surfaces indicate that it is

functioning in a low-quality, artificial environment, which limits the long-term ecological benefits it provides.

- Wetlands 4 and 5, located in constructed drainage areas, demonstrate limited nutrient removal due to their shallow, intermittently flooded conditions and small size. While the vegetative cover, including soft rush and straw-colored flatsedge, helps uptake nutrients from collected stormwater, these wetlands are largely artificial systems with minimal natural function, restricting their overall contribution to nutrient removal.
- Wetland 6 is a more complex system, with both mowed (6A) and natural (6B) portions. The *Phragmites*-dominated areas and red maple in Wetland 6B contribute to nutrient removal, particularly where Morris Creek interacts with the wetland. However, the mowed and managed sections (6A) are much less effective due to human disturbance and regular maintenance, reducing the wetland's overall capacity for nutrient capture and processing.
- Wetland 7, despite its tidal influence, is dominated by invasive *Phragmites australis*. Though it contains native salt marsh species like *Spartina alterniflora*, the presence of *Phragmites* limits its ecological quality. The tidal nature does increase the wetland's ability to process nutrients, especially nitrogen, but the overall poor habitat quality affects its capacity to provide comprehensive nutrient removal benefits.

2.6.2.6 Production Export

Wetlands 1, 4, 5, 6B, and 7 exhibit a high production export function, but this function is largely influenced by their poor ecological quality and the dominance of invasive species. While these wetlands do produce a substantial amount of organic material, much of it is contributed by *Phragmites australis*, an invasive plant that reduces biodiversity and habitat quality. Although the wetlands have the potential to support invertebrates and fish that rely on detritus and organic matter, the overall value of this production is limited by the degraded condition of the wetlands.

- Wetland 1 produces organic material from its vegetated areas, but the dominance of *Phragmites* and the modified hydrology limit its ability to support a diverse range of species. Wetlands 4 and 5, with their limited emergent vegetation, contribute some organic material to the system, but their artificial nature and small size restrict their overall ecological significance.
- Wetland 6B is more effective in exporting organic material due to the palustrine emergent and forested wetlands dominated by red maple, spicebush, and extensive *Phragmites*. These species produce large amounts of leaf litter and plant detritus, which can be transported downstream via the permanently flooded channels and connection to Morris Creek. However, the presence of *Phragmites* limits the ecological value of the organic material being exported, reducing the wetland's overall contribution to a healthy aquatic food chain.
- Wetland 7 generates significant organic matter, but this is largely due to the extensive stands of *Phragmites australis* present. While the wetland's tidal influence facilitates the movement of organic material into nearby estuarine systems, the poor quality of the habitat, dominated by invasive species, limits the broader ecological benefits typically associated with production export in more diverse and healthy wetland systems.

2.6.2.7 Sediment/Shoreline Stabilization

Wetlands 1, 4, 5, 6B, and 7 exhibit sediment and shoreline stabilization functions, but their effectiveness is moderated by the poor quality of these wetlands, which are often dominated by invasive species and

impacted by human activities. These wetlands provide limited sediment trapping and stabilization function due to their vegetation and hydrologic connections, the low ecological quality reduces their overall ability to provide sustained stabilization. Wetland 7, for example, provides tidal shoreline protection due to its connection to Morris Creek and Long Island Sound, but the dominance of *Phragmites australis* limits the diversity and resilience of the shoreline. Although *Spartina* species are present and help prevent erosion, the overall habitat quality is compromised by the invasive vegetation, affecting the long-term stability of the sediment.

In contrast, Wetlands 2 and 3 provide moderate stabilization functions. While their emergent and forested vegetation does help anchor soil and reduce erosion, their smaller size and limited hydrological connections lessen their impact compared to the larger wetlands. These wetlands, although functioning to some degree, are not as effective in shoreline stabilization due to their isolated nature and the influence of surrounding infrastructure, further limiting their overall ecological contributions.

2.6.2.8 Wildlife Habitat

The wetlands on the Airport site are generally low-quality habitats for wildlife due to their level of disturbance and management. Wetlands 1, 6B, and 7 offer relatively higher wildlife habitat value compared to the others, but even these are limited by factors such as regular mowing, invasive species dominance, and proximity to airport infrastructure. While Wetland 7 benefits from its tidal influence and estuarine characteristics, supporting some species of aquatic organisms, birds, and small mammals, the overall habitat quality is constrained by the dominance of *Phragmites australis*, an invasive species. Wetlands 3, 4, and 5 provide moderate wildlife habitat value; however, these areas are heavily influenced by human activities such as regular mowing and adjacent airport operations, which significantly limit their potential to support diverse or sensitive wildlife. Wetland 6A is the lowest quality in terms of habitat, as it is primarily a managed, mowed lawn, further reducing its capacity to support any significant wildlife populations.

2.6.2.9 Recreation

Recreational opportunities are nonexistent in the wetlands around the Airport due to their location within the airport property, safety restrictions, and proximity to runways and taxiways. None of the wetlands are accessible to the public. The primary focus of these areas remains on airport operations, not recreation, further diminishing their value for public engagement.

2.6.2.10 Education/Scientific Value

The educational and scientific value of these wetlands is generally limited, though Wetlands 1, 6B, and 7 offer some potential for research, particularly in areas such as wetland plant communities, hydrology, and tidal ecology. Wetland 7 is somewhat more significant due to its connection with tidal processes and the opportunity it presents for studying coastal wetlands in a highly urbanized environment. However, most of these wetlands, including Wetlands 4 and 5, are low-quality or constructed systems with unique hydrology but minimal natural function, making them only moderately useful for educational purposes. These smaller, more artificial wetlands may provide insights into the management of urbanized wetlands, but their value for broader scientific research is limited.

2.6.2.11 Uniqueness/Heritage

The uniqueness of the wetlands at the Airport is generally low, except for specific elements such as the presence of the state-threatened *Paspalum laeve* in Wetlands 2 and 3. This rare plant species adds some ecological significance to otherwise disturbed or low-functioning wetlands. Wetland 7 stands out slightly due to its estuarine influence, connecting to Morris Creek and Long Island Sound, which contributes to its uniqueness. However, despite these features, the wetlands overall are relatively typical for urbanized environments and do not display a high degree of uniqueness value beyond these isolated cases.

2.6.2.12 Visual Quality/Aesthetics

The visual and aesthetic quality of the wetlands surrounding the Airport is largely low, with the exception of Wetland 7, which offers scenic views tied to its tidal nature and proximity to Morris Creek. The connection to the tidal system and the open water areas provides some level of aesthetic appeal. Wetlands 1 and 6B contribute marginally to the area's visual quality due to their more natural vegetation. In contrast, Wetlands 4, 5, and 6A are largely dominated by mowing and infrastructure, making them aesthetically insignificant.

2.6.2.13 Threatened or Endangered Species Habitat

While the habitat potential for endangered species across most of these wetlands is generally low, wetlands 1, 2, and 3 hold some value due to the presence of *Paspalum laeve*, a state-threatened species. The occurrence of this plant indicates some conservation importance, but otherwise, these wetlands do not support a wide range of sensitive or endangered species. The botanical mapping of *Paspalum laeve* shows the species adjacent to the wetlands at an elevation higher than would be impacted by the proposed tide gate modifications. Wetland 7, due to its estuarine size and influence, offers potential for habitat improvement to support additional rare or endangered species, but overall, the habitat quality remains constrained by invasive species and limited diversity.

2.6.2.14 Existing Wetlands Function & Values Assessment Conclusion

The wetlands surrounding the Airport generally exhibit low to moderate ecological functions and values, with some exceptions. Wetlands 1, 6B, and 7 provide the highest ecological value, primarily through their roles in sediment stabilization, nutrient removal, and production export. Wetland 7, in particular, is critical due to its connection to the tidal system of Morris Creek and Long Island Sound, supporting a variety of aquatic species and contributing significantly to tidal shoreline protection. The combination of tidal exchange, native halophytic vegetation, and its estuarine influence makes Wetland 7 the most ecologically important wetland in the area. Wetlands 1 and 6B also provide essential functions, especially in nutrient removal and wildlife habitat, thanks to their more natural vegetation and hydrologic connectivity. However, their proximity to airport infrastructure limits their potential for supporting diverse wildlife populations.

In contrast, Wetlands 2, 3, 4, and 5 have lower ecological functions, particularly due to regular mowing, human disturbances, and their more isolated or constructed nature. While these wetlands contribute to sediment stabilization and nutrient removal, their capacity to support wildlife and provide habitat is diminished by their maintenance and location near runways and taxiways. Wetlands 4 and 5 offer some educational value due to their unique hydrology as constructed drainage areas, though their ecological contributions are modest. Overall, the recreational value of all the wetlands is minimal, as public access is

restricted due to their location within the airport property, and the aesthetic value is generally low except for Wetland 7, which augments the natural scenery around Morris Creek.

For additional information on the Proposed Project (Impact) Site, refer to Appendix G.

3. Mitigation Project

3.1 Mitigation Project Overview – Enhancement Areas

The Mitigation Project will enhance **28.5 acres** of low tidal marsh habitat with the re-growth of *Spartina alterniflora* and significant reduction of *Phragmites australis* throughout the Mitigation Project area wetlands. These conditions will be achieved by increasing the depth and duration of inundation of the *Phragmites australis*-dominated wetlands with highly saline tidal water, alongside active control and management of the existing stands of *Phragmites*. These proposed conditions will provide increased inundation depth in the tidal wetlands between the mean tide level and mean high water level, significantly benefiting the low marsh regions.

The Mitigation Projects will achieve these objectives by completing the following:

- Adjustments to normal tide gate operation to achieve inundation in the Mitigation Project wetlands to elevation 2.5 feet NAVD88;
- Increasing initial inundation duration to six (6) hours;
- Implementing a mowing program as detailed below; and
- Implementing an Adaptive Management Plan if the Mitigation Project Performance Standards are not met.

This maximum inundation elevation of 2.5 feet' NAVD88 has been assigned to avoid flooding the Airport runway safety areas and adjacent properties, while allowing for periodic inundation of an extensive area of *Phragmites*-dominated Mitigation Site wetlands.

A tide gate adjacent to the Airport will be adjusted to achieve optimal inundation levels and is automated, designed to regulate tidal flow and salinity levels effectively. The current SCADA programming logic controls the gate to maintain water surface elevations upstream below elevation 2.0 feet NAVD88, while allowing periodic flushing to increase brackish water conditions. Planned upgrades to the system include improvements to the gate's responsiveness and fine-tuning its programming for greater alignment with tidal cycles and ecological goals. This trusted system employs robust computer programming to ensure consistent operation. See Appendix D Tidal Monitoring Analysis.

The proposed inundation level will align with the tidal regime and will be managed through adaptive tide gate operations to achieve an optimal balance between *Phragmites* suppression (using saline water exposure to facilitate the transition to native *Spartina* and low marsh habitats) and stormwater management.

Mitigation Performance Standards are to be achieved at the close out of the Mitigation Work Plan (MWP), following a five-year monitoring period. Adaptive management will be implemented as needed within the first year after commencement of the MWP, based on specific triggers outlined in section 3.7 Mitigation

Performance Standards – Enhancement Areas. The areas of inundation will be monitored regularly during the 5-year monitoring period, as intertidal habitat transitions from *Phragmites* dominated wetland to low salt marsh habitat, including the re-growth of *Spartina alterniflora*.

See Appendix A: Proposed Tidal Wetland Design depicting the proposed design and layout of the Mitigation Project.

3.2 Mitigation Project Overview – Creation Areas

The Mitigation Project will create **3.61 acres** of new tidal salt marsh complex by converting upland areas into intertidal habitat that supports native salt marsh vegetation, particularly *Spartina alterniflora* in the low marsh zone. The created marsh will be designed to integrate with the surrounding enhanced wetlands and will be graded to appropriate elevations to facilitate tidal exchange.

The Mitigation Project will achieve these objectives by completing the following:

- Excavating existing upland material in designated creation areas to a base elevation of approximately 1.0 feet NAVD88.
- Placing clean sand to meet the final design grades as depicted on the grading plan, ensuring appropriate elevations for tidal habitat establishment. The clean sand will be placed along a 3% slope, starting at elevation 2.3 feet NAVD88 and extending downward to the lower excavation limits.
- Constructing tidal channels to connect the created salt marsh with existing channels, ensuring adequate drainage and tidal flushing.
- Planting the vegetated portions of the newly created marsh with *Spartina alterniflora* to establish a functional low marsh ecosystem. The final site elevations and tidal channel layout have been designed to support sustained tidal inundation, ensuring the long-term success of the created salt marsh. Unlike the enhancement areas, which rely on increased tidal inundation to shift existing vegetation composition, the creation areas will be developed from the ground up, establishing an entirely new intertidal habitat. These efforts will expand the footprint of functional salt marsh within the Mitigation Site, increasing ecological resilience, improving habitat connectivity, and supporting critical estuarine functions.

See Appendix A: Proposed Tidal Wetland Design depicting the proposed design and layout of the Creation Areas.

3.3 Mitigation Site Location

The Mitigation Project will focus on the enhancement and creation of tidal wetlands within the Airport property boundary. The tide gate is located along Morris Creek, approximately 1/4 mile downstream from the Airport. The latitude and longitude for the Airport according to Google Maps is 41.263937, -72.886305.

The Mitigation Project will occur within a maximum elevation of 2.5 feet NAVD88 and within the Mitigation Project wetlands. These wetland areas were described by McCue and include the following flag series: WF100-WF194; WF300-WF384; WF400-WF459; WF500-WF714; WF800-WF941; and WF1000-WF1347.

3.4 Mitigation Site Selection

The selected Mitigation Site holds significant value as it encompasses critical intertidal marsh habitat, recognized as essential in Connecticut for supporting diverse coastal ecosystems.[9] Located on the same property as the Proposed Project impact area at the Airport, the Mitigation Site ensures that tidal wetland improvement efforts occur onsite rather than offsite. Mitigating onsite offers numerous advantages, including maintaining ecological continuity, minimizing the disruption of existing hydrologic systems, and addressing impacts within the same watershed.

The Airport site where the mitigation will take place is located along the Connecticut coastline, less than a mile from the Long Island Sound. The Mitigation Site is optimally positioned to support low marsh tidal wetland habitat, which offers numerous ecological benefits, including serving as a nursery ground for fish and shellfish species and providing flood protection. The proximity to Long Island Sound also improves the potential for saltmarsh plant regrowth, particularly for native species such as *Spartina alterniflora,* essential for a thriving low marsh ecosystem.

In addition, a unique feature of the Mitigation Site is the presence of a tide gate, which allows for an innovative approach of controlled management of tidal water inundation. This adaptability enables close monitoring and fine-tuning of saltwater exposure to promote conditions unfavorable for invasive *Phragmites* and conducive to native salt marsh species. Unlike a traditional wetland enhancement project, which may require extensive earthwork, this inundation-focused approach minimizes site disruption, lowers costs, and reduces the carbon footprint by eliminating the need for large volumes of soil excavation, offsite disposal, and placement of imported clean sand. By leveraging natural processes, this unique site supports a sustainable return of native vegetation, allowing *Spartina* to re-grow naturally, with targeted replanting only if necessary. This nature-based approach ensures the site can regenerate in a way that prioritizes ecological integrity and long-term resilience.

The Mitigation Project consists of heavily regulated and managed tidal wetland areas, where hydrological processes and tidal exchange are actively controlled by management of the tide gate. This level of intervention creates a highly distinctive ecological and hydrological setting, diverging significantly from natural tidal wetlands, making it a unique site with no directly comparable reference system in terms of its management and resulting conditions.

A portion of the Mitigation Site will be dedicated to the creation of new tidal salt marshes within existing upland areas. Unlike the enhancement areas, which rely on controlled inundation to shift existing vegetation composition, these creation areas will involve excavation and regrading to establish appropriate tidal elevations. The design includes excavating upland material, placing clean sand to meet final grades, and constructing tidal channels to ensure proper hydrologic connectivity. These newly

[9] CT ECO Basic Data Guide, Connecticut Critical Habitats, https://cteco.uconn.edu/guides/Critical_Habitat.htm

created wetlands will integrate with the existing salt marsh complex and surrounding enhancement areas, expanding the footprint of functional tidal marsh habitat within the Mitigation Site.

3.5 Mitigation Project Goals – Enhancement Areas

The following Mitigation Project goals have been established to address the ecological impacts and promote habitat improvement to inform mitigation efforts for the Proposed Project. These goals focus on the enhancement of wetland functions and values, habitat improvements for state-listed species, and enhancement of ecosystem services, while balancing the operational needs of the Airport.

1. Enhance Wetland Hydrology and Enhance Floodflow Alteration

Goal: Improve the capacity of wetlands located on the Airport property to store, filter, and slowly release floodwaters, thereby reducing the potential for downstream flooding and enhancing groundwater recharge.

Approach: Revive natural hydrological connections between the wetlands and adjacent water bodies such as Morris Creek and Tuttle Brook; maintain proper water levels by addressing obstructions caused by invasive *Phragmites.*

Projected Outcome: Enhanced floodwater retention capacity, reducing downstream flood risks and improving resilience against storm events.

2. Improve Sediment Retention and Shoreline Stabilization

Goal: Increase the wetlands' ability to trap sediment and stabilize shorelines to protect water quality and reduce erosion.

Approach: Inhibit invasive species, particularly *Phragmites*, and enhance the growth of native *Spartina alterniflora* in estuarine intertidal wetland areas. The native *Spartina* anchors soils and enhances sediment retention along watercourses.

Projected Outcome: Reduced erosion and sedimentation into surrounding water bodies, leading to improved water quality and improved shoreline stability.

3. Enhance Nutrient Removal and Water Filtration

Goal: Improve nutrient uptake and water filtration within the wetlands, thereby contributing to water quality improvement in adjacent water bodies.

Approach: Allow for the re-growth of native plant species in estuarine wetland areas that are effective at nutrient cycling and pollutant filtration. Enhance hydrological flow to allow for better nutrient capture and transformation.

Projected Outcome: Improved capacity for wetlands to remove excess nutrients from stormwater runoff, reducing risks of eutrophication in Long Island Sound.

4. Enhance and Improve Wildlife Habitat

Goal: Enhance the habitat quality of the wetlands to support diverse wildlife, including state-listed threatened and endangered species.

Approach: Enhance the regrowth of native vegetation in wetland areas to create suitable habitats for species such as *Spartina alterniflora* (salt marsh cordgrass). Remove *Phragmites* and other invasive species that limit biodiversity and habitat quality. Enhance habitat structures through reconnected hydrological features.

Projected Outcome: Increased biodiversity and improved natural area conditions for the enhancement of intertidal marsh, a critical habitat in Connecticut that supports a diversity of state-listed threatened and endangered species.

5. Mitigate for Impacts to Fish and Shellfish Habitat

Goal: Enhance the habitat potential for aquatic species by improving wetland conditions and hydrological connections to adjacent estuarine systems.

Approach: Enhance tidal wetlands and improve connections to Morris Creek to improve spawning and nursery habitats for fish and shellfish. Facilitate the re-growth of native salt marsh vegetation to support nutrient cycling and habitat for estuarine species.

Projected Outcome: Improved habitat for fish and shellfish, contributing to the health of local aquatic ecosystems and supporting broader estuarine food webs.

3.6 Mitigation Project Goals – Creation Areas

The following goals have been established for areas where existing upland will be converted to tidal wetland habitat. These goals support the overall mitigation strategy by expanding wetland acreage, establishing self-sustaining hydrologic and vegetative conditions, and contributing to the long-term resilience of coastal wetland systems in the face of sea level rise and habitat fragmentation.

1. Establish Tidal Hydrology in Former Upland Areas

Goal: Create suitable hydrologic conditions in currently upland areas to support the development of tidal wetland communities.

Approach: Lower site elevations and regrade to appropriate intertidal contours and ensure connectivity to existing tidal channels and flow paths through proximity to Morris Creek and the surrounding salt marsh system.

Projected Outcome: Regular tidal inundation within the designed elevation range, supporting the creation of functional intertidal wetland habitat.

2. Initiate Native Salt Marsh Vegetation Communities

Goal: Support the growth of native tidal wetland vegetation, particularly *Spartina alterniflora* and other low marsh species, in created wetland areas.

Approach: Plant appropriate native species within designed elevation zones. Manage early successional dynamics to control invasive colonizers.

Projected Outcome: Initial creation of native low marsh plant cover, leading to the development of a self-sustaining vegetative community appropriate to tidal wetland conditions.

3. Provide Foundational Habitat Structure and Connectivity

Goal: Support early-stage habitat development for estuarine wildlife through increased habitat area and connectivity.

Approach: Design wetland creation areas to integrate with adjacent tidal marsh habitats, including tidal channels that facilitate wildlife use.

Projected Outcome: Utilization of created wetlands by estuarine and marsh-dependent species, contributing to regional habitat patch connectivity and broader ecological function.

4. Support Long-Term Wetland Resilience and Adaptation

Goal: Develop a site foundation capable of adapting to dynamic coastal conditions, including sea level rise.

Approach: Design a resilient grading profile that positions low salt marsh plantings within the upper quartile of the tidal range and use monitoring data to guide adaptive management strategies.

Projected Outcome: Created tidal wetlands that demonstrate trajectory toward long-term stability, with the potential to persist and evolve as sea levels change.

3.7 Mitigation Performance Standards – Enhancement Areas

Mitigation Performance Standards have been developed according to the Ecological Performance Standard Criteria (USACE, 2020). These standards have been developed for project specific conditions to be clear, concise, and measurable, and to be used to assess whether the mitigation project is achieving its objectives.

It is important to note that the proposed mitigation activities focus on enhancement of **28.5 acres** of tidal low marsh complex. The low marsh complex is predominantly vegetated by the hydrophytic grass *Spartina alterniflora* and contains mudflats and tidal channels. [10]

Within the low marsh complexes found in New England, typical percent coverage by *Spartina alterniflora* is observed to be 70% or greater within optimal salt marsh systems. *Spartina*-dominated marsh areas, mudflats, and tidal channels are all critical components of a healthy salt marsh ecosystem, providing habitat diversity and supporting ecological functions. The extent of colonization by *Spartina* within the low marsh system is based on a complicated balance of factors, including tidal range and frequency, salinity levels, and hydrological connectivity.

[10] USDA NRCS. (2002). "Plant guide for smooth cordgrass (*Spartina alterniflora*)." Natural Resources Conservation Service, USDA.

Given that the existing wetland system is regulated such that the duration of inundation by brackish water is reduced, it is anticipated that the enhanced aerial extent of *Spartina* will be less than that experienced for optimal typical salt marsh systems. This Mitigation Project sets a target of at least 50% *Spartina alterniflora* coverage across the entire restored tidal low marsh complex, with mudflats and channels forming the remaining areas of the complex. A healthy salt marsh relies on each of these habitat typologies for biodiversity and ecological functions.

The following Performance Standards define the success criteria for the enhancement of **28.5 acres** of the tidal wetland Mitigation Project area. The Performance Standards are to be achieved by the end of the five-year monitoring period, with Adaptive Management Plan (AMP) measures triggered as outlined below, based on ongoing monitoring results within the enhancement areas.

Mitigation Plan Performance Standards:

- At least 85% coverage by *Spartina alterniflora* throughout the vegetated areas within the tidal low marsh complex.

- No greater than 15% coverage of *Phragmites australis* (common reed) within the 28.5 acres of salt marsh complex, requiring elimination of small patches and aggressive treatment of larger infestations, with progress documented throughout the monitoring period.

Trigger for AMP Phase One in the Enhancement Areas:

- If the team determines that AMP Phase One is warranted, it will be initiated if monitoring data show that average *Phragmites* height and stem density within the salt marsh complex have not decreased by at least 15% compared to baseline conditions.

Baseline monitoring will be conducted prior to commencement of the Mitigation Work Plan (MWP) to document existing site conditions. Within one year after commencement of the MWP, Phase One of the AMP may be triggered to initiate corrective measures based on observed outcomes. Refer to Section 3.13 Mitigation Project Schedule – Enhancement Areas.

The outlined Performance Standards for the tidal wetland Mitigation Project are SMART as they are:

- Specific, detailing clear success criteria such as the required areal extent and coverage of *Spartina alterniflora*, acceptable coverage of non-vegetated areas, and control measures for *Phragmites australis*.

- Measurable, providing quantifiable thresholds, ensuring progress can be assessed objectively.

- Attainable, as the proposed criteria align with ecological benchmarks typical of functional tidal wetlands and are achievable with appropriate enhancement techniques.

- Reasonable (Practicable), focusing on site-specific ecological goals and addressing invasive species management in a feasible manner.

- Trackable, allowing for consistent monitoring and documentation over time, with clear metrics and requirements (e.g., tracking vegetation cover percentages and invasive species treatment efforts) to evaluate compliance and project success.

3.8 Mitigation Performance Standards – Creation Areas

Mitigation Performance Standards for the salt marsh creation areas have also been developed in accordance with the Ecological Performance Standard Criteria (USACE, 2020) to ensure clear, measurable, and objective assessment of project success. While the enhancement portion of the Mitigation Project focuses on improving conditions within existing tidal wetlands, the creation effort will establish **3.61 acres** of entirely new intertidal salt marsh habitat within previously upland areas.

Newly created salt marshes require careful consideration of grading, substrate stability, and tidal exchange to support the development of a self-sustaining, functional marsh system. The goal is to achieve a vegetated low marsh dominated by *Spartina alterniflora*, with appropriate siting of tidal channels to enhance habitat diversity and ecological function.

Within healthy, naturally occurring low marsh complexes in New England, *Spartina alterniflora* typically covers 70% or greater of the vegetated areas. For the created salt marsh, the target *Spartina alterniflora* coverage is set at 85% within the vegetated areas, recognizing that the establishment of marsh vegetation is influenced by hydrology, soil conditions, and salinity fluctuations. Hydrologic connectivity will be achieved through the construction of tidal channels linking the newly created areas to existing marsh systems, ensuring proper inundation and drainage.

The following Performance Standards define the success criteria for the **3.61 acres** of newly created salt marsh complex. The Performance Standards are to be achieved by the end of the five-year monitoring period, with adaptive management measures triggered as outlined below, based on ongoing monitoring results within the Creation Areas:

- At least 85% vegetative coverage by *Spartina alterniflora* within the vegetated portions of the created salt marsh.

- No greater than 15% coverage by *Phragmites australis* within the created marsh areas, with targeted removal and management measures to ensure suppression of invasive species, with progress documented throughout the monitoring period.

Trigger for the Adaptive Management Plan in the Creation Areas:

- The team will conduct ongoing monitoring within the Creation Areas. Within one year after commencement of the MWP in Creation Areas, the AMP may be triggered to initiate corrective measures based on observed outcomes. For additional details on the schedule and adaptive management strategies for the Creation Areas, refer to Section 3.14 Mitigation Project Schedule – Creation Areas and to Section 4.6 AMP in Creation Areas.

3.9 Tidal and Salinity Data Collection

Tidal water surface elevation and salinity data were collected from the Tweed New Haven Airport proposed marsh mitigation areas from July to September 2024. The monitoring was conducted using strategically placed salinity and water level data loggers to evaluate the potential effects of proposed mitigation actions, including increasing tidal exchange and elevation of brackish water inundation upstream of the tide gate. The collected data was analyzed to assess variability in tidal water surface

elevation and salinity, with a focus on understanding correlation to tide gate management. The results of the data collection are documented in the *Tweed New Haven Tidal Monitoring Report*, included as Appendix D.

Tidal water surface and salinity data was collected at 7 locations from July to August 2024 as shown in Figure 6 to provide a baseline characterization of conditions experienced within the proposed Mitigation wetlands, with targeted data collection within existing stands of *Phragmites*. The collected tidal water surface elevations and salinities at these locations are shown in Figure 7 and Figure 8. Figure 9 shows the maximum salinities recorded on July 25, 2024.

Figure 6 Data logger locations pre-relocation.

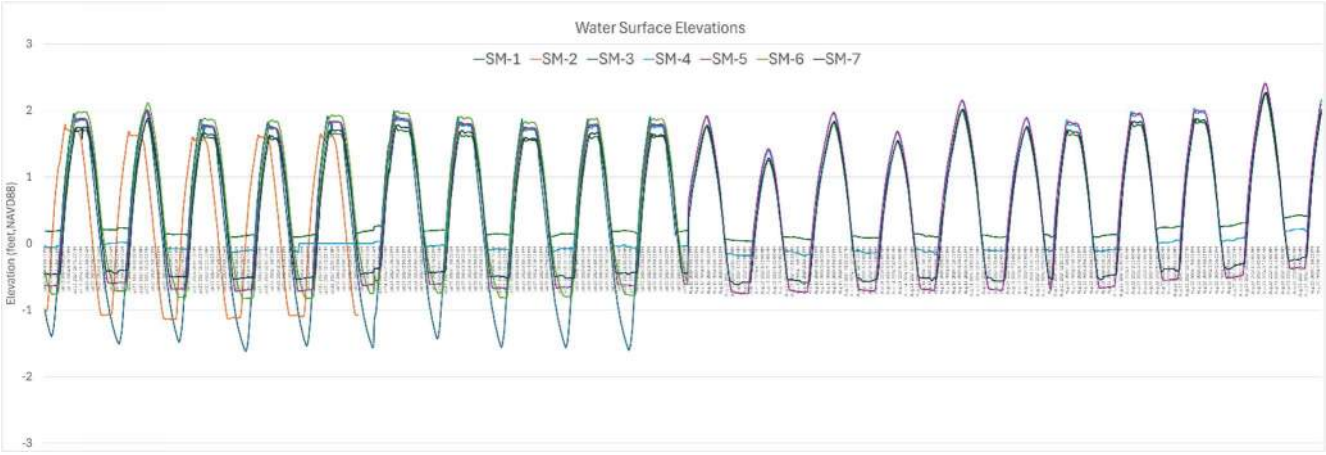

Figure 7 Pre-relocation elevation (NAVD88): July 19, 2024 to August 23, 2024

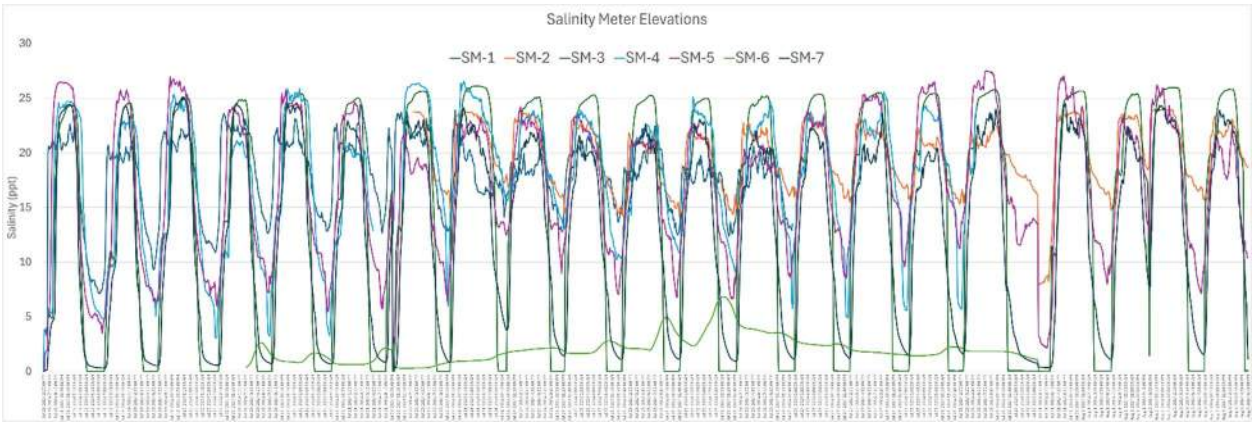

Figure 8 Pre-relocation salinity (ppt): July 19, 2024 to August 23, 2024.

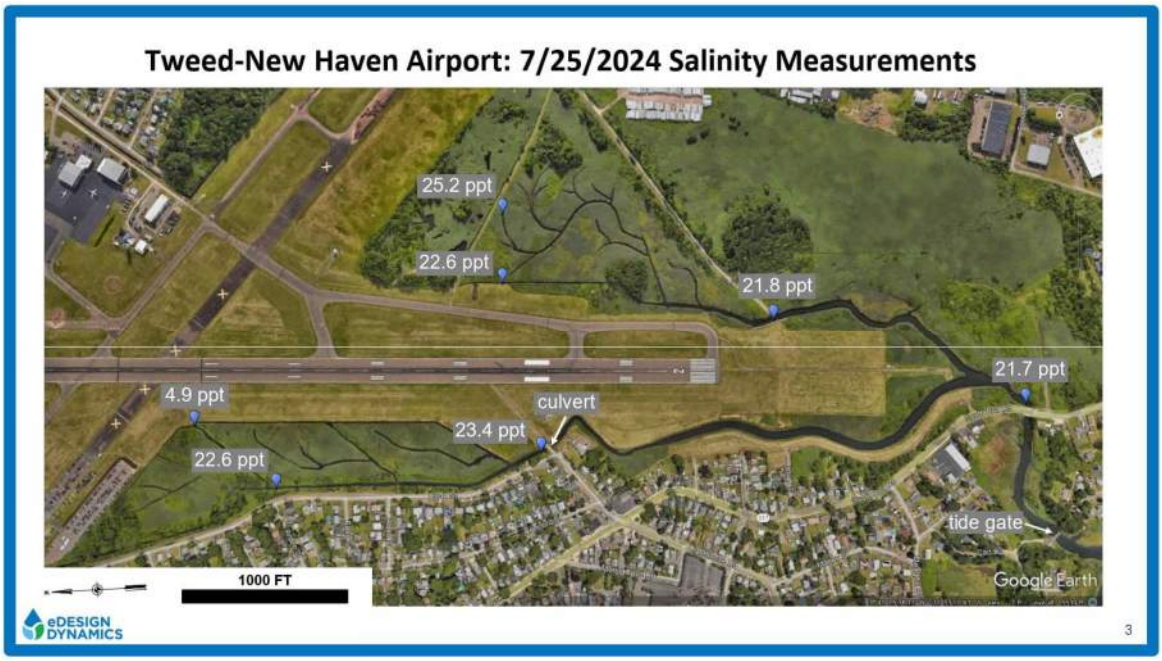

Figure 9 Pre-relocation salinity measurements, 7/25/2024

The data loggers were then moved to specifically target known stands of *Spartina alterniflora* within the proposed Mitigation wetland areas, to ascertain if the thriving *Spartina* areas were experiencing different water level or salinity conditions than the areas dominated by *Phragmites*. The loggers were left in this second location from late August 28, 2024, to September 20, 2024, as shown in Figure 10. Water surface elevation and salinity data collected from this time period are shown in Figure 11 and Figure 12. Figure 13 shows the maximum salinities recorded on September 15, 2024.

Figure 10 Data logger locations post-relocation

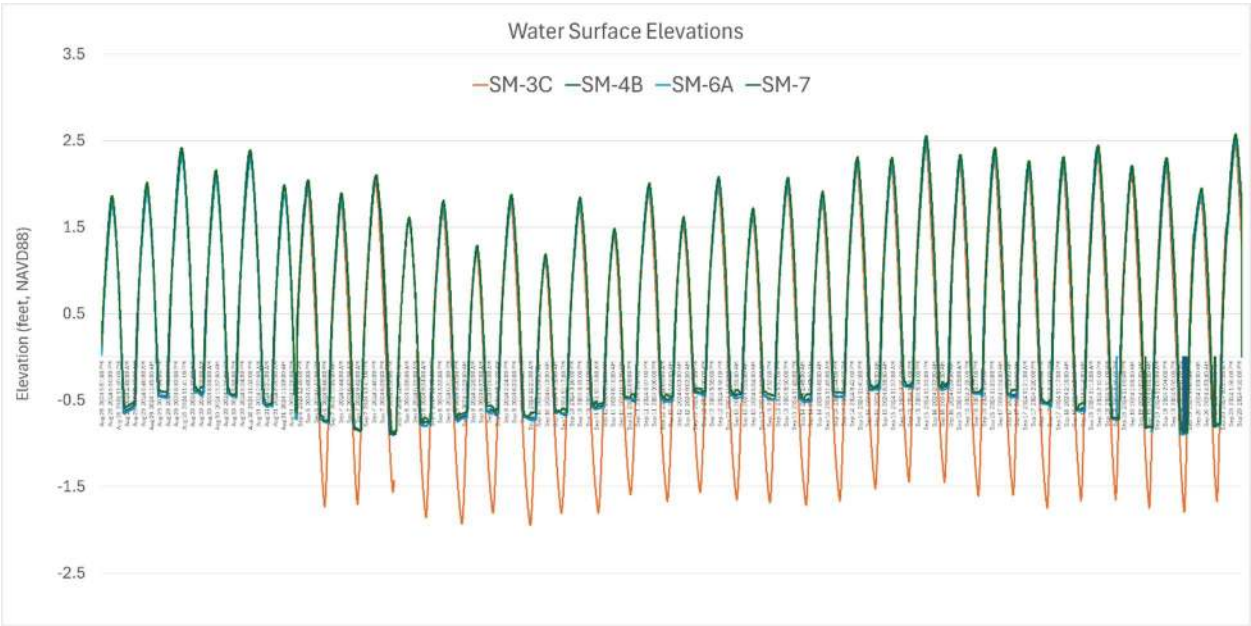

Figure 11 Post-relocation elevation (NAVD88): August 28, 2024 to September 20, 2024

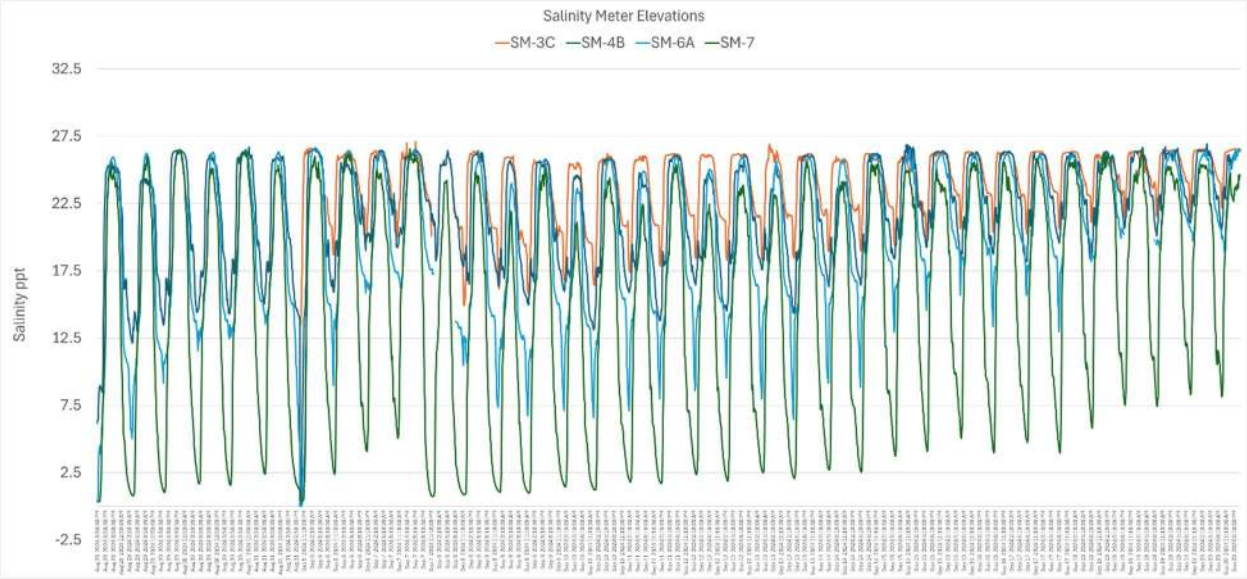

Figure 12 Post-relocation salinity (ppt): August 28, 2024 to September 20, 2024

Figure 13 Post-relocation salinity measurement, 9/15/2024

The results of the data collection effort support that water surface elevations upstream of the tide gate structure are regulated to stay at or below elevation 2.0 feet NAVD88 during periods of normal operation. The results indicate that the tidal column may not fully penetrate into the dense stands of *Phragmites* within the marsh mitigation areas, potentially limiting the benefits of tidal exchange in these areas. The tidal prism does not fully extend to the upstream extents of the marsh as managed under normal operational procedure. Freshwater inputs appear to be lowering salinity levels in the upper regions of the northwest marsh. It was determined from the data that the current duration of inundation within the existing stands of *Spartina* is six hours (average elevation 0.6 feet NAVD88); this duration has been set as the target duration for enhancement activities at elevation 2.5 feet NAVD88.

Research on the expansion and control of *Phragmites australis* in tidal wetlands has demonstrated that water salinity strongly influences soil salinity, which in turn affects plant community composition. For example, Hellings & Gallagher showed that increasing water salinity to 15–30 ppt significantly reduced *Phragmites* height, biomass, and underground reserves, indicating that sustained high water salinity can shift soil conditions to favor halophytic species like *Spartina alterniflora.* Their findings support the use of water salinity as an indicator of soil salinity in consistently flooded low marsh environments, as frequent tidal inundation facilitates the quick alignment of surface water and soil porewater salinity levels. A study by Medeiros, White, and Howes examined the role of salinity and competition in the replacement of *Phragmites australis* by *Spartina alterniflora* in New England salt marshes, demonstrating that elevated water salinity can effectively drive shifts in plant dominance. The research found that while both species exhibited reduced growth at higher salinity levels, *Phragmites* was disproportionately affected compared to *Spartina*, which exhibits greater tolerance to salinity. (Chambers et al., 2003) highlighted the role of water salinity as a proxy for soil salinity in determining the distribution and expansion of *Phragmites australis* in tidal wetlands. The research found that *Phragmites* invasion is constrained in areas where water salinity exceeds 10 ppt, as higher salinity leads to increased soil sulfide levels and reduced plant vigor. Field observations and experimental data confirm that soil salinity closely follows water salinity gradients, with frequent tidal exchange helping to maintain salinity levels that limit *Phragmites* colonization while favoring native marsh species like *Spartina alterniflora*.

Under a given tidal regime, soil salinity tends to reach a dynamic equilibrium, fluctuating within a predictable range at high tide and at low tide. If the tidal regime is altered to allow for a longer duration of high tide, this equilibrium shifts, potentially resulting in a new salinity range. This shift occurs because prolonged exposure to saline water increases the amount of salt that enters soil pore spaces.

Salt enters the soil through two primary mechanisms: convection and diffusion. Convection refers to the physical movement of saline water into the soil driven by tidal flow, while diffusion is the process by which salt ions move from areas of higher concentration (in the tidal water) to areas of lower concentration (within the soil). Together, these processes are described by the convection-diffusion equation, which governs solute transport in porous media (Guimond & Tamborski, 2021). As tidal inundation persists, more saltwater is introduced and retained within the soil, allowing greater penetration and retention of salt. This dynamic is often modeled similarly to a pollutant plume, with saline water moving with the groundwater (advection) and expanding outward due to diffusion, ultimately leading to an overall increase in soil salinity.

The collected tidal water surface elevation and salinity data demonstrate that increased tidal exchange will elevate salinity levels within the mitigation area, supporting the transition from a *Phragmites*-dominated system to a *Spartina*-dominated tidal low marsh. Given that low marsh habitats are regularly inundated by tidal waters, soil salinity in these areas is closely correlated with water salinity, as frequent tidal exchange allows for rapid equilibration between surface water and soil porewater.

It is also important to note that the use of reference sites is a well-established and effective strategy in wetland enhancement and creation, providing benchmarks for target hydrology, vegetation composition, and functional performance. In the case of this mitigation site, the presence of existing stands of *Spartina alterniflora* within the mitigation area offers a unique opportunity to use on-site reference conditions. These areas of low marsh vegetation are already adapted to the tidal regime proposed in the mitigation plan, including approximately six hours of inundation at elevations up to 2.5 feet NAVD88.

3.10 Mitigation Work Plan – Enhancement Areas

To achieve the Performance Standards, the tide gates located downstream of the Airport site will be controlled to increase the depth and duration of inundation of the stands of *Phragmites* located in the upstream tidal wetlands at the Airport. This will be combined with a mowing program to further inhibit the growth and spread of *Phragmites*. The increase in brackish water inundation, combined with mechanical control methods, will promote a more resilient and functioning salt marsh ecosystem.

Unlike traditional restoration projects involving significant construction activities, the Mitigation Work Plan employs an ecosystem-based approach centered on targeted inundation with saline water and mowing to control invasive *Phragmites* and promote the re-growth of native *Spartina*. While there are no typical construction elements such as grading or excavation, oversight will focus on ensuring the proper execution of inundation and mowing strategies, monitoring the hydrological response, and assessing ecological outcomes. This adaptive approach emphasizes ongoing monitoring and adjustments allowing the project to respond dynamically to observed site conditions and ecological feedback.

The FAA was involved in monthly coordination meetings with CT DEEP and USACE and has stated that the Mitigation Project, as reviewed by the FAA's Senior Wildlife Biologist Amy Anderson, would not be viewed as a wildlife attractant and adheres to the guidance on land uses within the FAA Advisory Circular AC 150/5200-33C *Hazardous Wildlife Attractants on or near Airports*, dated 2020.

The initial activities for the Mitigation Project will commence during year one of the implementation of the Mitigation Project and include:

- Adjustments to the tide gate operational procedure to allow for the inundation of *Phragmites australis* with saline water for an extended period of time to weaken its growth followed by;
- Scheduled mowing and removal of the cut *Phragmites australis* biomass to prevent regrowth and support native tidal wetland habitat enhancement; and
- Consistent monitoring and management of the Mitigation Project to achieve desired objectives.

A wetland scientist shall be on-site to monitor implementation of the Mitigation Work Plan to ensure compliance with the Mitigation Plan and to adjust when appropriate to meet mitigation goals. See the Monitoring Plan Section 5 in this Mitigation Plan for more information.

Mowing Program - Mowing will be conducted twice per year to effectively manage *Phragmites* growth and prevent its spread. Mowing reduces photosynthetic capacity and depletes energy reserves stored in the rhizomes. Studies have shown that repeated cutting can reduce *Phragmites* biomass and growth rate (Hazelton et al., 2014).

- Pre-mowing surveys will be conducted to ensure compliance with NDDB-listed bird species protection, ensuring that no sensitive species are present.

- Mowing will occur during two periods a year, in the early summer (June 15 – July 15) and in the fall (September 1 September 30).

- Before the first tide gate modification, mowing may take place as needed, only after pre-mowing bird and plant surveys have been completed.

Adjustments to Inundation - Maintain standing brackish water over mowed areas to increase salinity levels and suppress *Phragmites* regrowth. Monitoring will assess whether this approach successfully reduces *Phragmites* and allows *Spartina* to increase.

Grading / Excavation - To avoid excess sedimentation and disturbance within the existing wetlands, excavation and removal of *Phragmites australis* is not proposed at this time. Mowing and removal of the above ground *Phragmites* biomass is proposed during initial implementation of the Mitigation Project. Therefore, **no grading changes are proposed** as part of the Mitigation Project for Enhancement Areas. Any grading or earthwork, if required, will be addressed as part of the AMP.

Erosion Controls - Similarly, **no erosion controls will be necessary**, as the Mitigation Project for Enhancement Areas does not involve construction or earthwork. Any earthwork activities, if required as part of future adaptive management, will be addressed under the AMP. Any actions beyond increased inundation and mowing of *Phragmites* will be addressed as part of the AMP.

Adjustments to the Mowing Program and Adjustments to Inundation, along with proposed mitigation monitoring, are further described in the following sections.

3.10.1 Mowing Program

The mowing program for the Mitigation Project has been designed to control *Phragmites australis* while protecting the NDDB-listed plant and bird species of concern. The approach will balance management of invasive species with careful timing to minimize impacts to sensitive habitats and species during critical periods such as breeding and growing seasons.

Pre-mowing surveys shall be conducted prior to each mowing event to ensure no listed bird or plant species are present in the immediate mowing areas. If bird nesting or sensitive plants are identified, mowing shall be adjusted or delayed to protect those species.

Year-Round Mowing Guidelines:

- **Frequency**: Mowing will occur twice per year to effectively manage *Phragmites* growth and prevent its spread. The mowing program of *Phragmites* will occur during the early summer (between June 15 – July 15) and during the fall (September 1 – September 30).

- **Height**: Vegetation will be mowed or selectively cut to a height of approximately 6-8 inches above existing grade to ensure *Phragmites* regrowth is suppressed while protecting lower-lying native plants. Mowing will be limited to areas with monoculture stands of *Phragmites*. In mixed vegetation areas, selective cutting will be employed to avoid impacting desirable plant species.

- **Removal of Cuttings**: All cut, above-ground biomass of *Phragmites* material must be removed from the site to prevent regrowth, and care must be taken to avoid soil surface compaction that could lead to grade changes.

    - All debris generated from removals must be transported off-site and properly disposed of at an approved facility, in compliance with applicable regulations. Disposal shall be conducted at the contractor's expense.

Specific Mowing Schedule:

- **Early Summer Mowing (June 15 - July 15)**:
  - **Purpose**: Target early-season *Phragmites* growth before seed production begins, reducing the risk of seed dispersal.

  - **Bird Protection**: To avoid disturbing NDDB-listed bird species, this mowing will be scheduled after the nesting season for ground-nesting birds but before young birds are fledging.

- **Fall Mowing (September 1 – September 30)**
  - **Purpose**: A mowing in the fall will target *Phragmites* regrowth, ensuring it is weakened before the winter dormancy period.

  - **Bird Protection**: Conduct mowing after migratory birds have left the area, ensuring no disturbance to bird species during migration.

- **Initial Mowing (as needed)**
  - An initial mowing is planned prior to the first tide gate modification and will be conducted as needed, and only after the completion of pre-mowing bird and vegetation surveys.

3.10.2 Adjustments to Inundation

The Mitigation Project includes manipulating the inundation level of tidal wetlands within the Airport by the management of tide gate operations coordinated with the tidal cycle.

The proposed mitigation approach will be controlled by changes to the existing tide gate operational procedure and implementation of means to lock the flap gate structure. Any actions beyond increased inundation and mowing of *Phragmites* will be addressed as part of the AMP.

The tide gate operation will be modified to allow greater tidal exchange and prolonged inundation of brackish water in the mitigation wetlands, supporting the shift from *Phragmites australis* dominance to *Spartina alterniflora*. The revised operational procedure focuses on increasing the water levels upstream of the tide gate within the tidal wetlands at the Airport. The timing of tide gate closures will be adjusted to maintain brackish conditions for longer periods than previously permitted by the existing operation of the gate, while still preserving flood control during storm events.

The following outlines the proposed tide gate operational procedure to achieve the proposed Mitigation actions:

1. **Tide Gate Operation in Normal Conditions**:

   - The sluice gates will be opened to allow the water surface elevation (WSE) upstream to reach the desired water level of 2.5’ NAVD88. The exact opening measurement of the sluice gates will be based on tide gate monitoring.

   - Once the desired water level of 2.5’ NAVD88 is achieved, the sluice gates will be closed, allowing the brackish water to remain upstream for an extended period. Based on review of the tidal data collected for the site, the inundation period at elevation 2.5’ NAVD88 and

below will be inundated for an initial period of six (6) hours. To sustain a water level of 2.5' throughout the marsh, the tide gate will be closed when the water level immediately upstream of the tide gate reaches 2.59'. Through H&H modeling it was determined that closure at 2.59' maintains a WSE of 2.5 ft for six hours in the upper reaches of the marsh. Refer to Appendix D Tidal Monitoring Analysis and Appendix H Hydraulic Analysis of Proposed Tide Gate Operation for further information on the planned inundation water level.

- The existing flap gate will be replaced with a mechanized sluice gate to be kept shut during this operation, except during storm events, to prevent premature drainage and maintain brackish conditions. The mechanized sluice gate provides a means of locking to achieve optimal flooding duration. Should water levels upstream of the tide gates exceed maximum allowable elevations due to groundwater and surficial water inputs, the sluice gates will be opened until desired elevations are reached.

- These changes to operational procedure will be made by reprogramming the automated Supervisory Control and Data Acquisition (SCADA) system that controls the AUTO operational mode.

- The proposed WSE of 2.5' was determined to be the highest allowable that would not flood the Airport's safety areas and would not increase the risk of flooding to nearby properties, residents, or roads. The proposed inundation at a WSE of 2.5' will only take place during dry weather periods where there will be no additional inputs to the system and no change in WSE. Figure 14 shows an inundation map that depicts proposed conditions.

By raising the normal height of the sluice gate and timing its closure to keep water levels higher for longer upstream, the modified procedure will support tidal wetland enhancement at the Airport while still protecting against flooding. The automated system will still allow for real-time adjustments when necessary to balance habitat goals with flood control measures.

See Appendix D Tidal Monitoring Analysis and Appendix H Hydraulic Analysis of Proposed Tide Gate Operation for more information.

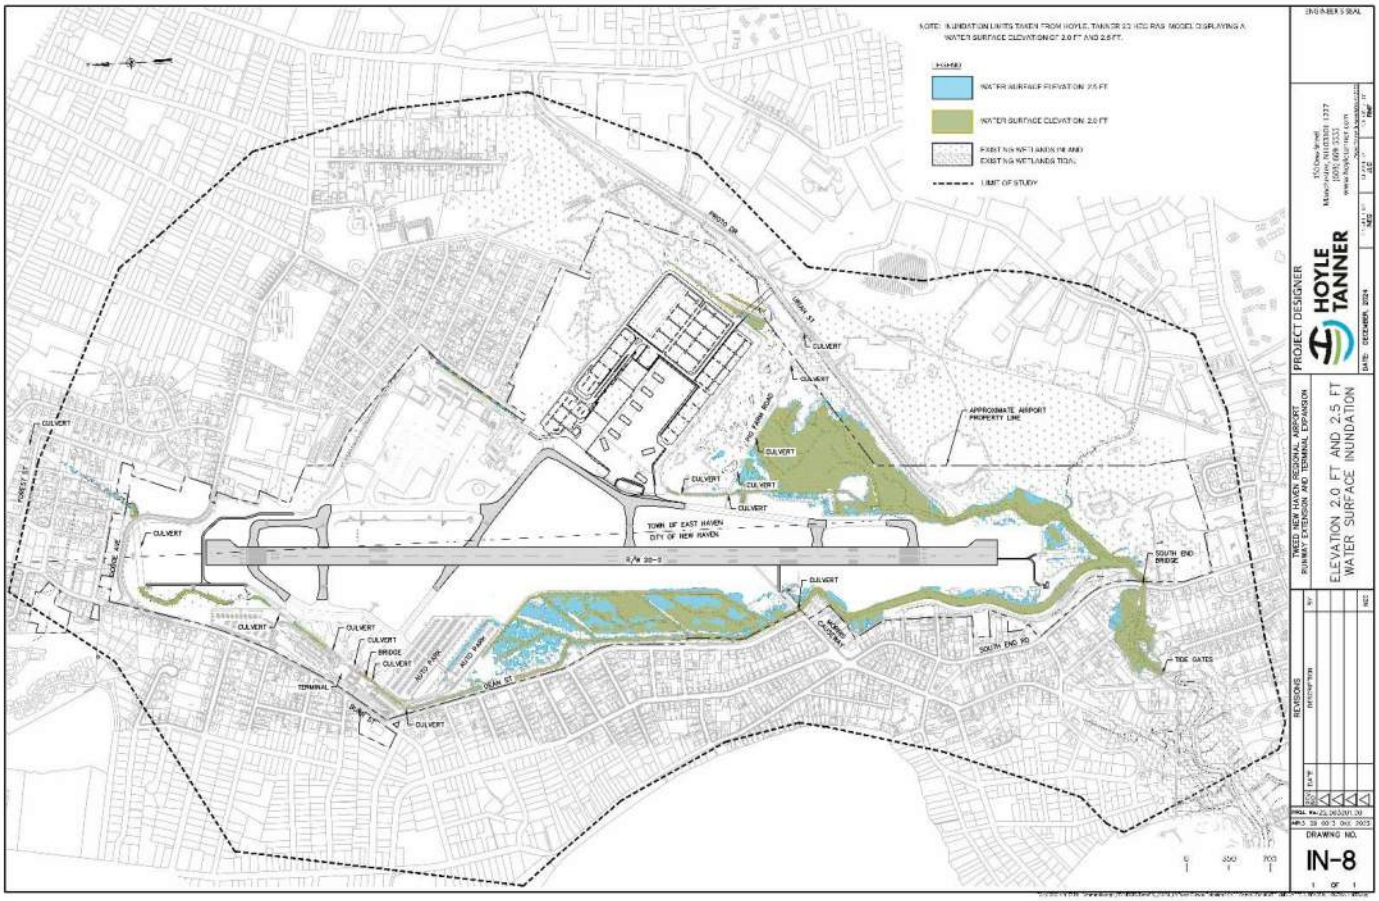

Figure 14 Water surface inundation at 2.0' (existing condition) and 2.5' (proposed condition)

2. **Storm Event Procedure**:

    - When severe weather is forecast, the tide gate will be switched to Watershed Drain Mode, preemptively lowering water levels upstream to prevent flooding as previously described. There will be no loss of storage in the system during rain events as a result of the Work Plan.

    - During this period, the gates will function as they do under current storm preparation guidelines, with automatic adjustments to manage water levels both upstream and downstream of the tide gate.

3.11 Mitigation Work Plan – Creation Areas

The construction of the salt marsh creation areas will be executed using standard best management practices for wetland creation to minimize disturbance to adjacent habitats. The work will follow a structured sequence, including site preparation, excavation, placement of imported soil, tidal channel construction, planting, installation of waterfowl barriers, and post-construction monitoring.

3.11.1 Pre-Construction Activities

Prior to construction, pre-construction surveys will be conducted to ensure that no federally or state-listed bird or plant species are present within the planned creation areas. If nesting birds or sensitive plant species are identified, work will be adjusted or delayed to avoid impacts in accordance with regulatory guidelines as determined by the associated Mitigation Plans developed to address species impacts with CTDEEP.

Erosion and sediment control (E&S) measures will be installed along the perimeter and interior of the creation sites to protect adjacent wetland resource areas that are not designated for disturbance. These controls will include silt fencing, straw bales, and other appropriate measures to prevent sediment migration into undisturbed areas. E&S measures will remain in place and be actively maintained throughout the duration of construction.

3.11.2 Excavation and Removals

Excavated material will be characterized for disposal, analyzing for federal, state, and facility-specific criteria. Additional protocols for soil characterization and handling will be outlined in the Contract Documents for the Mitigation Project. All excavated material will be transported offsite to a suitable disposal facility.

The existing creation sites are currently upland vegetation communities with a mix of early successional trees, shrubs, vines, and herbaceous species. To transition these areas into a functioning tidal salt marsh complex, soil will be excavated to an elevation of 1.0 feet NAVD88 with sand being placed to an elevation of approximately 2.0 feet NAVD88 to achieve target elevations for low marsh vegetation.

To limit disturbance and minimize erosion risks, the amount of exposed soil will be carefully managed, ensuring that only the areas actively undergoing excavation and grading remain open at any given time.

3.11.3 Grading and Placement of Clean Sand

Once excavation is complete, clean, low-nutrient sandy planting medium will be placed within the creation areas to achieve final elevations that support low salt marsh habitat. The creation sites will be graded to the final design elevations as shown on the Grading Plan, ensuring a 3% slope from a high elevation of 2.3’ NAVD88 downward. This grading approach will ensure proper tidal inundation and drainage to support salt marsh vegetation establishment.

Tidal channels will also be constructed and graded to connect the created marsh areas to existing tidal channels, ensuring proper hydrologic exchange. These channels will facilitate the distribution of water during tidal flooding and aid in drainage as the tide recedes, promoting natural sediment transport and salinity regulation.

3.11.4 Vegetation Planting

Once final grades are established, native salt marsh vegetation will be planted to facilitate marsh development. *Spartina alterniflora* plugs will be planted 18 inches on center across the vegetated portions of the created marsh. Planting will be conducted by hand to minimize disturbance.

To protect newly planted *Spartina* from waterfowl herbivory, temporary waterfowl exclusion barriers will be installed immediately after planting. These barriers will remain in place until plantings are well rooted and vegetated areas reach 85% cover.

3.11.5 Post-Construction Activities

Upon completion of construction, all access roads and staging areas used during excavation and grading will be returned to their pre-construction conditions. Any temporary infrastructure installed for construction access will be removed, and disturbed areas outside of the created marsh footprint will be stabilized as necessary.

A five-year monitoring program will commence following commencement of the MWP to assess the success of the newly created salt marsh. Within one year after commencement of the MWP in Creation Areas, the AMP may be triggered to initiate corrective measures based on observed outcomes. For additional details on the schedule and adaptive management strategies for the Creation Areas, refer to Section 3.14 Mitigation Project Schedule – Creation Areas and to Section 4.6 AMP in Creation Areas.

3.12 Mitigation Monitoring

Project monitoring will determine if the mitigation efforts meet the set Performance Standards and if measures are necessary to ensure the Project is accomplishing its objective, according to the requirements of 33 C.F.R. § 332.6. Monitoring reports will be submitted to assess the development and condition of the mitigation project.

Within one year after commencement of the MWP in Enhancement Areas and the MWP in Creation Areas, then AMP may be triggered to initiate corrective measures based on observed outcomes.

Refer to the Monitoring Plan Section 5 of this Mitigation Plan for information on the specific mitigation monitoring protocols, scopes, and reporting requirements for monitoring to occur after implementation of the Mitigation Work Plan and as needed to occur during the AMP in the Enhancement Areas and/or the AMP in the Creation Areas.

3.13 Mitigation Project Schedule – Enhancement Areas

The Mitigation Project activities for enhancement of the tidal wetlands will follow a phased approach to ensure the improvement of wetland functions and compliance with USACE guidelines.

The timetable shown in Table 6 outlines the target dates of key mitigation milestones for the enhancement areas:

Table 6 Implementation Schedule for Enhancement Areas.

ACTIVITY	DATE
Secure all necessary permits and approvals from USACE and other regulatory bodies for the Mitigation Project	January 2026
Baseline monitoring before commencement of the Mitigation Work Plan (MWP)	October 2025
Commencement of the Mitigation Work Plan (MWP)	March 2026

Annual vegetation monitoring	August 2026
Within one year after commencement of the MWP, AMP Phase One may be triggered.	September 2026
Annual vegetation monitoring	August 2027
If applicable – AMP Phase Two is triggered.	September 2027
Annual vegetation monitoring	August 2028
If applicable -- AMP Phase Three is triggered.	September 2028
Annual vegetation monitoring	August 2029
If applicable -- AMP Phase Four is triggered.	September 2029
Annual vegetation monitoring	August 2030
Annual vegetation monitoring	August 2031
Completion and Closeout of the MWP, including achievement of the MWP Performance Standards	October 2031
Regulatory Release and Commencement of Long-Term Management Plan (LTMP)	December 2031
If applicable – additional one-year period of monitoring and adaptive management enhancements to determine if final MWP Performance Standards are met. If the MWP Performance Standards are not met after an additional one-year period, then monitoring and adaptive management enhancements shall occur for another one-year period; this cycle of additional one-year periods to continue to occur until the MWP Performance Standards have been met.	September 2031 – September 2032

Annual monitoring is conducted in August, prior to the September mowing program, to allow the team to evaluate whether adaptive management strategies should be implemented. Monitoring in August is specifically timed to capture the majority of the growing season, ensuring that vegetation assessments reflect the peak condition of the wetland and provide the most accurate data for performance evaluation.

3.14 Mitigation Project Schedule – Creation Areas

The implementation schedule for the creation areas aligns with the enhancement areas but follows a more straightforward timeline focused on construction, monitoring, and adaptive management, if needed. Following the securing of necessary permits, baseline monitoring will first be conducted, with construction commencing soon after. Once the marsh creation work is complete, annual vegetation monitoring will occur every August for five years, to assess the growth of *Spartina alterniflora*. Within one year of initiating the MWP in the Creation Areas, an Adaptive Management Plan may be activated to implement corrective actions based on observed outcomes. After the 5-year monitoring period and upon successful achievement of Performance Standards, the MWP will be completed, followed by regulatory release and the commencement of long-term management.

Table 7 Implementation Schedule for Creation Areas.

ACTIVITY	DATE
Secure all necessary permits and approvals from USACE and other regulatory bodies for the Mitigation Project	January 2026
Commencement of the Mitigation Work Plan (MWP) for Creation Areas including site preparation, excavation and removals, and grading	March – April 2026

Complete the MWP including placement of sand, planting, and installation of waterfowl barrier	May 2026
Annual vegetation monitoring	August 2026
Within one year after commencement of the MWP, AMP strategies may be triggered.	September 2026
Annual vegetation monitoring	August 2027
Annual vegetation monitoring	August 2028
Annual vegetation monitoring	August 2029
Annual vegetation monitoring	August 2030
Annual vegetation monitoring	August 2031
Completion and Closeout of the MWP, including achievement of the MWP Performance Standards	October 2031
Regulatory Release and Commencement of Long-Term Management Plan (LTMP)	December 2031

3.15 Mitigation Project Responsible Parties

The responsible parties for the Mitigation Project will ensure that all relevant stakeholders are actively engaged in the successful execution of the Mitigation Work Plan, including the Adaptive Management Plan as applicable. The Airport is a commercial service airport owned by the City of New Haven. TNHAA has full control of the operation and management of the airport, including land, buildings and easements by virtue of a lease to the authority by the City of New Haven. On August 19, 2022, TNHAA entered into a long-term Lease & Development Agreement with The New HVN, LLC.

The New HVN, LLC will be included in all phases of planning and implementation to maintain alignment with the lease agreement and broader project objectives. The team, comprised of Hoyle Tanner and eDesign Dynamics, will lead the technical aspects of the project, leveraging their expertise to deliver the outcomes described in this Mitigation Plan. Additionally, a wetland scientist or ecologist will perform the vegetation surveys. Other professionals will be brought on to the team as needed to provide specialized knowledge and oversight, ensuring that the Mitigation Work Plan is executed in accordance with regulatory requirements and ecological best practices. This collaborative approach will promote accountability and ensure that the goals of the Mitigation Plan are met.

4. Adaptive Management Plan

4.1 Adaptive Management Plan Overview

The AMP provides an approach for the implementation of actions based on monitored conditions to address foreseeable and unforeseen circumstances that may adversely impact Mitigation Project success. The AMP has been developed according to the requirements of 33 C.F.R. § 332.7(c).

Monitoring results will guide decisions on whether additional management actions are necessary. The AMP will be implemented, if required, within one year after implementation of the Mitigation Work Plan within both the Enhancement Areas and Creation Areas. During this time, the Applicants will enact repairs to the Mitigation Project and/or additional activities as outlined in the AMP, with the goal of achieving the stated Performance Standards.

For the enhancement areas, AMP phases will include monitoring of the following: water level monitoring (monthly water level monitoring will be conducted to assess the extent of tidal inundation in addition to monthly tide gate inspections and salinity assessments); vegetation monitoring (annual vegetation surveys will assess plant composition, height, stem density, & health and the adjustment of monitoring transects within the salt marsh complex as needed); invasive species monitoring (rapid invasive species surveys will be conducted from May to October to track *Spartina alterniflora* growth and *Phragmites australis* regrowth); and wildlife monitoring (wildlife presence and species observations will be documented during the same time as the annual vegetation surveys).

For the creation areas, the AMP provides straightforward corrective strategies to ensure the successful establishment of a functional tidal marsh. These strategies include supplemental planting, substrate stabilization measures, such as additional sand placement to address sediment loss, and/or tidal channel adjustments to improve hydrologic connectivity if needed. Invasive species control will be implemented through manual removal or, if necessary, selective herbicide application. To mitigate waterfowl grazing, additional temporary exclusion barriers will be installed as needed to protect plantings. These adaptive strategies will ensure that the created salt marsh meets Performance Standards at the end of the 5-year monitoring period and develops into a resilient tidal wetland habitat.

Refer to Sections 5.6.5 and 5.6.6. Monitoring Scopes for more detail on each of the monitoring scopes.

4.2 AMP Phase One in the Enhancement Areas: Initial Hydrologic & Vegetative Management

Objective: Enhance salinity exposure and reduce *Phragmites australis* competitiveness by increasing tidal exchange and targeted herbicide application.

Actions:

Herbicide Application: Selective spot treatments with herbicide are part of the integrated management approach, ensuring careful application to minimize impacts on non-target species. Apply an approved herbicide (e.g., glyphosate or imazapyr) specifically formulated for wetlands to areas of *Phragmites* regrowth. Herbicide treatment in conjunction with hydrologic manipulation has been shown to effectively control *Phragmites* (Kettenring & Adams, 2011). The timing of the application is critical; it shall occur in the fall, when *Phragmites* is transporting nutrients to its roots.

Given the application of herbicide in the fall, mowing will only be performed once a year, during the early summer period from June 15 through July 15. Note that the mowing program will continue once a year in the early summer with an herbicide application in the fall for all Phases of the AMP.

Extended Inundation: Increase the duration of brackish water inundation following herbicide application. Increased inundation time of the treated area in brackish water for an extended period will further stress *Phragmites* and prevent regrowth.

Excavate Tidal Channels: Excavate a series of tidal channels to improve tidal flushing. Additional deepening of existing tidal channels to facilitate greater tidal exchange, increasing both the frequency and extent of brackish water inundation. These actions will enhance the marsh's

ability to naturally regulate salinity levels and support native vegetation. Increased tidal flushing reduces the risk of freshwater ponding, which favors *Phragmites* (Rooth et al., 2003).

- Soil Testing: Soil testing is required prior to excavation and disposal of material offsite, to determine contamination levels, if any, and ensure that the material is disposed of in an appropriate, approved facility in compliance with regulatory standards.

- Transport to Landfill: The excavated material is to be loaded into a truck and secured with a cover to prevent the material from shifting or blowing away during transport to the landfill.

- Workers are to remain vigilant to prevent spreading invasive *Phragmites*, using vehicle transport, avoid walking the grounds within the Airport, and minimizing direct contact with bare ground to limit the risk of unintentional propagation.

- Equipment: All trucks, excavation equipment, and all other equipment and vehicles utilized for manual excavation will be regularly cleaned within the wash area garage located onsite at the Airport and inspected to prevent the spread of invasive species.

- Gear and Clothing: After handling *Phragmites*, workers will thoroughly clean gear and clothing to prevent spreading viable plant fragments or seeds. Workers will thoroughly wash off boots in the wash area garage at the Airport. Workers' clothing and PPE will be placed in sealed bags for laundering off-site.

The location(s) for herbicide application, tidal channel excavation, and the time period for inundation extension will be informed by the monitoring scopes performed by the team.

Trigger for AMP Phase Two:

- If the team determines after one year that AMP Phase Two is warranted, it will be initiated if monitoring data show that average *Phragmites* height and stem density within the salt marsh complex have not decreased by at least 20% compared to baseline conditions.

4.3 AMP Phase Two in the Enhancement Areas: Expanded Hydrologic Improvement and Invasive Species Control

Objective: Further improve tidal exchange and suppress *Phragmites* regrowth by expanding channel excavation and continuing to mow once a year in the early summer with additional herbicide application in the fall.

Actions:

Continued Herbicide Application: Selective spot treatments with herbicide are part of the integrated management approach, ensuring careful application to minimize impacts on non-target species. Apply an approved herbicide (e.g., glyphosate or imazapyr) specifically formulated for wetlands to areas of *Phragmites* regrowth. Herbicide treatment in conjunction with hydrologic

manipulation has been shown to effectively control *Phragmites* (Kettenring & Adams, 2011). The timing of the application is critical; it shall occur in the fall, when *Phragmites* is transporting nutrients to its roots.

Given the application of herbicide in the fall, mowing will only be performed once a year, during the early summer period from June 15 through July 15. Note that the mowing program will continue once a year in the early summer with an herbicide application in the fall for all Phases of the AMP.

Additional Tidal Channel Excavation: Expand and deepen the network of tidal channels to enhance tidal flushing, increasing brackish water inundation frequency and extent, improving salinity regulation, supporting native vegetation, and reducing freshwater ponding that favors *Phragmites*.

- Soil Testing: Soil testing is required prior to excavation and disposal of material offsite, to determine contamination levels, if any, and ensure that the material is disposed of in an appropriate, approved facility in compliance with regulatory standards.

- Transport to Landfill: The excavated material is to be loaded into a truck and secured with a cover to prevent the material from shifting or blowing away during transport to the landfill.

- Workers are to remain vigilant to prevent spreading invasive *Phragmites*, using vehicle transport, avoid walking the grounds within the Airport, and minimizing direct contact with bare ground to limit the risk of unintentional propagation.

- Equipment: All trucks, excavation equipment, and all other equipment and vehicles utilized for manual excavation will be regularly cleaned within the wash area garage located onsite at the Airport and inspected to prevent the spread of invasive species.

- Gear and Clothing: After handling *Phragmites*, workers will thoroughly clean gear and clothing to prevent spreading viable plant fragments or seeds. Workers will thoroughly wash off boots in the wash area garage at the Airport. Workers' clothing and PPE will be placed in sealed bags for laundering off-site.

The location(s) for herbicide application and additional tidal channel excavation will be informed by the monitoring scopes performed by the team.

Trigger for AMP Phase Three:

- If the team determines after one year that AMP Phase Three is warranted, it will be initiated if monitoring data show that average *Phragmites* height and stem density within the salt marsh complex have not decreased by at least 25% compared to baseline conditions.

4.4 AMP Phase Three in the Enhancement Areas: Elevation Modification and Targeted Removal of *Phragmites*

Objective: To enhance native tidal wetland habitat by excavating *Phragmites*-dominated areas and lowering elevations to suitable tidal levels for the natural re-growth by *Spartina alterniflora*.

Actions:

- **Continued Herbicide Application**: Selective spot treatments with herbicide are part of the integrated management approach, ensuring careful application to minimize impacts on non-target species. Apply an approved herbicide (e.g., glyphosate or imazapyr) specifically formulated for wetlands to areas of *Phragmites* regrowth. Herbicide treatment in conjunction with hydrologic manipulation has been shown to effectively control *Phragmites* (Kettenring & Adams, 2011). The timing of the application is critical; it shall occur in the fall, when *Phragmites* is transporting nutrients to its roots.

  Given the application of herbicide in the fall, mowing will only be performed once a year, during the early summer period from June 15 through July 15. Note that the mowing program will continue once a year in the early summer with an herbicide application in the fall for all Phases of the AMP.

- **Manual Excavation**: In areas where *Phragmites* persists, manual excavation of rhizomes and stems will be conducted to remove any extensive monocultures. This method is labor-intensive but can be effective in small patches where other methods have been less successful.

    - Soil Testing: Soil testing is required prior to excavation and disposal of material offsite, to determine contamination levels, if any, and ensure that the material is disposed of in an appropriate, approved facility in compliance with regulatory standards.

    - Transport to Landfill: The excavated material is to be loaded into a truck and secured with a cover to prevent the material from shifting or blowing away during transport to the landfill.

    - Workers are to remain vigilant to prevent spreading invasive *Phragmites*, using vehicle transport, avoid walking the grounds within the Airport, and minimizing direct contact with bare ground to limit the risk of unintentional propagation.

    - Equipment: All trucks, excavation equipment, and all other equipment and vehicles utilized for manual excavation will be regularly cleaned within the wash area garage located onsite at the Airport and inspected to prevent the spread of invasive species.

    - Gear and Clothing: After handling *Phragmites*, workers will thoroughly clean gear and clothing to prevent spreading viable plant fragments or seeds. Workers will thoroughly wash off boots in the wash area garage at the Airport. Workers' clothing and PPE will be placed in sealed bags for laundering off-site.

- **Lower the Elevation within Excavated Areas:** In areas where monoculture stands of *Phragmites* are excavated, lower the elevation to align with the optimal tidal wetland elevations that have been shown to support successful *Spartina alterniflora* re-growth.

The location(s) for herbicide application and manual *Phragmites* excavation and the target elevation for the lowering of *Phragmites*-removal areas will be informed by the monitoring scopes performed by the team.

Trigger for AMP Phase Four:

- If the team determines after one year that AMP Phase Four is warranted, it will be initiated if monitoring data show that average *Phragmites* height and stem density within the salt marsh complex have not decreased by at least 30% compared to baseline conditions.

4.5 AMP Phase Four in the Enhancement Areas: Final Elevation Adjustments and Active Planting

Objective: Enhance a resilient *Spartina alterniflora* cover by refining elevations, adding clean sand, and planting native marsh vegetation. Includes expanding upon the action from Phase Three of excavating areas of *Phragmites* and lowering the elevation of excavated areas to the tidal elevations where successful *Spartina alterniflora* regrowth has been observed.

Actions:

- **Additional Areas of Manual Excavation**: Includes additional areas of *Phragmites* manual excavation expanding upon the areas excavated from Phase Three.
    - Soil Testing: Soil testing is required prior to excavation and disposal of material offsite, to determine contamination levels, if any, and ensure that the material is disposed of in an appropriate, approved facility in compliance with regulatory standards.
    - Transport to Landfill: The excavated material is to be loaded into a truck and secured with a cover to prevent the material from shifting or blowing away during transport to the landfill.
    - Workers are to remain vigilant to prevent spreading invasive *Phragmites*, using vehicle transport, avoid walking the grounds within the Airport, and minimizing direct contact with bare ground to limit the risk of unintentional propagation.
    - Equipment: All trucks, excavation equipment, and all other equipment and vehicles utilized for manual excavation will be regularly cleaned within the wash area garage located onsite at the Airport and inspected to prevent the spread of invasive species.
    - Gear and Clothing: After handling *Phragmites*, workers will thoroughly clean gear and clothing to prevent spreading viable plant fragments or seeds. Workers will thoroughly wash off boots in the wash area garage at the Airport. Workers' clothing and PPE will be placed in sealed bags for laundering off-site.

- **Clean Sand Placement**: Place a one-foot depth of a clean sandy planting medium in areas of manual excavation. The finished grades of the over-excavated areas will be designed to meet the tidal elevations where successful *Spartina alterniflora* regrowth has been observed elsewhere within the Airport site.

- **Plug Planting**: Planting plugs of *Spartina alterniflora* within the excavated, new sandy zones, at optimal tidal elevations will encourage the regrowth of a dense, resilient cover of native vegetation, supporting the enhancement of the tidal wetland habitat.

The design of the additional areas of excavation, clean sand placement, and plug planting will be informed by the water level monitoring, vegetation monitoring, and invasive species monitoring scopes.

If the Mitigation Work Plan (MWP) Performance Standards are not met by the end of the 5-year period of monitoring and adaptive management, then monitoring and adaptive management measures will be extended for an additional year. If the standards remain unmet after this period, successive one-year extensions will continue until the MWP Performance Standards are achieved. Adaptive management measures may include one or a combination of actions, determined by the team based on lessons learned from the effectiveness of previous AMP phase enhancements.

4.6 AMP in the Creation Areas

The AMP for the salt marsh creation areas is designed to ensure the successful creation of a salt marsh system. Unlike the enhancement areas, which require a phased approach to manage hydrology and invasive species, the creation areas will follow a more straightforward set of corrective strategies. If monitoring results indicate a need for corrective measures, AMP strategies in the creation areas will be implemented within one year following the Mitigation Work Plan's commencement, as determined by the team. These strategies focus on vegetation establishment, substrate stability, and tidal connectivity, ensuring the created marsh functions as intended.

Supplemental Planting of *Spartina alterniflora*

Supplemental planting of *Spartina alterniflora* will be implemented in underperforming sections. Plugs will be planted at 18-inch spacing to enhance vegetative cover and promote natural expansion.

Substrate Stabilization

Additional sand placement may be required in areas where significant sediment loss has occurred to restore target elevations for low marsh habitat.

Tidal Channel Adjustment and Hydrologic Connectivity

If tidal channels fail to maintain proper hydrologic connectivity, modifications will be made to ensure adequate tidal exchange. Minor regrading or sediment removal may be conducted to clear obstructions and improve drainage.

Invasive Species Control

If *Phragmites australis* or other invasive species establish within the created marsh, targeted removal efforts will be implemented. Manual removal and/or selective herbicide application (if necessary and approved) may be utilized to suppress invasive regrowth.

Wildlife Protection and Herbivory Management

If plant loss is attributed to waterfowl grazing, additional temporary waterfowl exclusion barriers will be installed to protect young plantings until they become well established.

By implementing these adaptive management strategies as needed, the Mitigation Project will ensure that the newly created salt marsh areas develop into functional tidal wetland habitat that meets the Mitigation Project Performance Standards.

4.7 Adaptive Management Plan Conclusion

The AMP Plan provides a flexible framework for both the enhancement and creation of tidal wetland habitat. By adjusting management strategies based on monitoring results, the AMP in the Enhancement Areas plan aims to reduce *Phragmites australis* dominance and enhance the conditions for *Spartina alterniflora* re-growth. For the creation areas, the AMP will ensure the successful establishment of the newly constructed salt marsh by addressing vegetation establishment, substrate stability, and tidal connectivity through targeted corrective actions. Regardless, it is anticipated that the initial Mitigation Project efforts will significantly expand and improve the tidal wetland habitat.

5. Monitoring Plan

5.1 Monitoring Plan Overview

Monitoring of the Mitigation Project will be completed to determine if the project meets its Performance Standards at the end of the 5-year monitoring period and to determine if adaptive measures are necessary to ensure the Project is accomplishing its objective, according to the requirements of 33 C.F.R. § 332.6.

Following completion of the Mitigation Work Plan, a Notification of Construction Completion shall be submitted to the USACE within 60 days. This includes a signed letter to USACE, Policy and Technical Support Branch or email to CENAE-R@usace.army.mil, specifying the date of completion of the mitigation work and the USACE permit number.

If Mitigation Project activities are initiated in but are not completed by December 31 of any given year, the permittee will provide the USACE Policy and Technical Support Branch, a letter providing the date mitigation work began and the work completed as of December 31. The letter will be sent or emailed to CENAE-R@usace.army.mil no later than January 31 of the next year. The letter will include the USACE permit number.

Following commencement of the Mitigation Work Plan, monitoring will occur throughout the first five years within the Mitigation Project wetlands. The Monitoring Plan has been developed according to the requirements of 33 C.F.R. § 332.6.

The enhanced and created salt marsh areas are expected to provide intertidal habitat services consistent with successful salt marshes throughout Long Island Sound. Through sustaining diverse benthic

communities and generating plant material for forage, salt marshes attract and sustain nesting and migrating birds, spawning fish, mollusks, crabs, and other invertebrates. Periodic monitoring is designed to assess the presence and trajectories of both fauna and flora throughout the five-year period, and to signal the need for additional action if damages are observed or if growth performance goals are not met. The information will also help determine the need for additional maintenance and/or adaptive management at the site, and to provide benchmarks for use in assessing damages from storms or from other catastrophic events.

5.2 Monitoring Protocol Overview

The monitoring protocol is designed to establish a replicable set of field observations performed at well-defined monitoring plots or quadrats to assess the progress towards, and the success or failure of, the proposed enhancement of salt marsh habitat. This protocol will be used for a minimum period of five years post-implementation of the Mitigation Project Work Plan to provide consistent and replicable methodology and parameters for measurement and documentation.

The vegetation monitoring scope will include a macro-scale, or overview assessment each year. The overview assessment will occur annually, in July, one month prior to the annual vegetation survey to occur in August. This timing ensures sufficient above-ground biomass production by *Spartina alterniflora*. To support this effort, the team will review high-resolution, updated aerial imagery of the site using platforms such as Skywatch or a similar service.

Given the dynamic nature of salt marsh ecosystems, where mudflats, tidal channels, and vegetated areas can shift over time, the aerial imagery review will verify the extent and distribution of low marsh habitat areas within the marsh complex on an annual basis. The vegetation monitoring scope within the marsh complex will be guided by the findings of the overview assessment. Based on the evaluation of the low marsh habitat, the placement of monitoring transects will be adjusted as needed to ensure they traverse through vegetated and representative portions of the complex. The team will work closely with a wetland scientist to determine the optimal transect locations.

For the creation areas, where habitat conditions are expected to remain more stable over time, monitoring transects and quadrats will remain fixed to allow for direct comparisons of vegetation coverage throughout the monitoring period. Vegetation monitoring will be conducted by a wetland scientist in accordance with the monitoring protocols outlined in this Mitigation Plan.

As Connecticut does not have state specific guidelines, the protocols outlined below are based on the *NYSDEC New York State Salt Marsh Restoration and Monitoring Guidelines* (2000),[11] which provide specific instructions for documenting vegetative success at enhancement sites.

5.3 Monitoring Transects

Transects will be established at approximately 250-meter intervals. End points will be marked with stakes for the duration of the monitoring period. Transects will be established at approximately 250-meter intervals, extending across representative sections of the low salt marsh complex, ensuring coverage across the tidal gradient and capturing variations in vegetation and hydrologic conditions throughout the enhanced and created wetlands. This placement provides consistent spacing and spans the full range of

[11] New York State Salt Marsh Restoration and Monitoring Guidelines, https://extapps.dec.ny.gov/docs/wildlife_pdf/saltmarsh.pdf

enhanced habitat, from areas of less frequent inundation to those regularly exposed to tidal flows, supporting comprehensive monitoring of enhancement success.

5.4 Monitoring Quadrats

Place quadrats (one square-meter) along the transects at a minimum of three different elevations (i.e., a minimum of three quadrats per transect). Within a single vegetation zone (e.g., low marsh *Spartina alterniflora* zone), quadrats must be located at least three meters apart along the length of the transect. Quadrat locations will be measured and recorded with respect to distance from one end of the transect stake.

5.5 Fixed-Point Photo Stations

The transect end point stakes will serve as the permanent photo stations for photographic monitoring. Photographs shall be taken at each end of each transect throughout the Mitigation Project area. In addition, provide an overview photograph or photographs of the entire Mitigation Project site and consistently use this location(s) for the duration of photo monitoring. Photographs shall be taken at low tide (avoiding spring tide and full moon periods) and shall be labeled with the location code, the direction of view, the date, the time, and the tide.

5.6 Progress and Monitoring Reports

A Progress and Monitoring Report describing the results of the monitoring, assessment and management activities will be submitted to the regulators by December 15th of each year for 5 years following the completion of the Mitigation Project. While separate Monitoring Reports will be prepared for the enhancement areas and creation areas, both will follow the same structure and submission timeline as is described in this section.

Annual monitoring reports will be submitted to the appropriate regulatory agencies, including reporting on the monitoring scope data for water levels, vegetation health, invasive species management, wildlife observations, and contingency inspections. Reports will be compiled according to the guidelines outlined in this Progress and Monitoring Report section of the Mitigation Plan.

The monitoring scopes will be performed at the frequencies as outlined in the Monitoring Plan and will continue for five years post-implementation of the Monitoring Project. The Monitoring Report will document each of the parameters monitored and will describe all observed conditions that may require or lead to corrective action. The Report will also detail any recommendations for corrective action for further discussion with the Permittee, regulators, and site owner, along with a workplan and schedule for completion or work to occur each year. At the successful termination of the five-year monitoring period, the Permittee will submit mitigation status and closure documents, including a final assessment of the Mitigation Project for review by the regulators, and the site will become the responsibility of the site owner.

The Monitoring Report will be in the following format:

5.6.1 Project Overview

- A Self-Certification Form will be completed and signed as the transmittal coversheet for each annual monitoring report and will indicate the permit number and the monitoring report number.

See Appendix E Mitigation Monitoring: Transmittal and Self Certification Form & Project Overview Form.

- A Project Overview Form will be included at the beginning of each annual monitoring report and will summarize problems which need immediate attention (e.g., severe invasive species problem, serious erosion, losses from herbivory, disease, etc.). See Appendix E Mitigation Monitoring: Transmittal and Self Certification Form & Project Overview Form.
- Summary data to substantiate the success and/or potential challenges associated with the proposed compensatory Mitigation Project, including:
    - Address Performance Standards achievement and/or measures to attain the standards.
    - Describe the monitoring inspections (and include dates of the inspections) completed for each monitoring scope that occurred since the last report.
    - Concisely describe adaptive actions done during the prior monitoring year to meet the performance or success standards – actions such as modifying the inundation period, controlling invasive plant species (with inundation, herbicide, or mechanical methods), re-grading the site, placing clean sand and planting, etc. Also describe any other adaptive actions done at each site.
    - Report the status of all erosion control measures on the Mitigation Site. Are they required as the Mitigation Project does not include any earthwork? If the measures have been deemed necessary by the AMP, are they in place and functioning? If temporary measures are no longer needed, shall they be removed?

5.6.2 Maps/Plans

Maps will be generated showing the location of the Mitigation Project site, adjacent landscape features and habitat types, locations of photographic reference points, transects, quadrat locations, and/or other features pertinent to the Mitigation Plan.

5.6.3 Corrective Actions

The team will describe the present conditions of the Mitigation Project and its trajectory within the planned transition of the intertidal wetland plant community. If applicable, the Report will include a brief discussion of the challenges and potential corrective actions proposed by the Permittee, including a timetable for subsequent interventions, as guided by the AMP.

5.6.4 Report Appendices

Appendix A -- An as-built plan showing the locations and extents of the tidal wetland plant communities to be enhanced or created as part of the Mitigation Project. Within each community type, the plan shall list each of the species present along with observations of soil and soil moisture regimes.

Appendix B – A vegetative species list of invasive species within the tidal wetland areas. The invasive species list will include those that cover at least 5 percent of their vegetative layer. The section will include discussion of the potential encroachment risk associated with the invasive species.

Appendix C -- Representative photos of the Mitigation Site taken from the same locations for each monitoring event. Photos will be dated and clearly labeled with the direction from which the photo was taken, and photo locations will be identified on the appropriate maps.

5.6.5 Monitoring Scopes for the Enhancement Areas

There are several distinct types of monitoring scopes to be conducted as part of the Monitoring Plan:

1. **Pre-Mitigation Benchmarking including Baseline Monitoring 4-5 Weeks Before Implementation**

    - Prior to any Mitigation Project activities, a set of photographs at the fixed-point photo stations will be taken to document conditions within the tidal wetlands where the mitigation is planned.

    - Baseline monitoring will include an overview assessment of the salt marsh complex, including the evaluation of high resolution, continually updated aerials of the low salt marsh habitat complex, to inform the placement of monitoring transects through vegetated portions of the complex.

    - Utilizing the transect and quadrat methodology, initial *Spartina alterniflora* and *Phragmites australis* coverage within the salt marsh complex will be monitored to determine pre-enhancement conditions. *Spartina* coverage will be assessed within the vegetated areas of the low salt marsh complex, while the extent of *Phragmites* will be evaluated throughout the salt marsh complex, including tidal channels and mudflats within the 28.5 acre complex. In addition, the baseline transect and quadrat monitoring will document the average height and stem density of *Phragmites australis* within the salt marsh complex before enhancement activities and implementation of the Mitigation Work Plan.

        - The following parameters will be monitored at each quadrat.
            - Plant coverage: visual estimates of percent vegetative cover of *Spartina alterniflora,* percent cover of invasive *Phragmites australis,* and bare soil present within each quadrat.
            - Stem density: Randomly select one 0.25 m^2 corner of the 1.0 m^2 quadrat. Count all live stems of any plant species found within that section.
            - Plant height: Using the same quadrat randomly selected for stem density, measure all live stems of any plant species from the base of the plant to the top of the stem in meters.

    - Given the innovative approach of the Mitigation Work Plan to utilize mowing and inundation of *Phragmites* to promote the enhancement of *Spartina,* monitoring will be conducted 4-5 weeks prior to implementation rather than exclusively post-implementation, as typically required by USACE guidelines.

      Four to five weeks before implementation and commencement of the Mitigation Project, representatives of the team will walk the site (with the property owner and regulators if requested) to assess compliance with submitted workplans. The team will document the transect with photographs and will record any concerns raised by the regulators present. If any further interventions or corrections are requested, these will be discussed at the

time of the inspection and memorialized in writing. Any follow-up on corrective measures will be submitted in a subsequent report.

2. **Water Level Monitoring:**
    - The water level and tide gate inspections will be conducted by the team. Data will be reviewed monthly by the team and any discrepancies will prompt corrective actions (e.g., adjusting the operation schedule of the tide gate).
    - If AMP measures are implemented, the team will document each action taken in detail and monitor the resulting changes.
    - Water levels upstream of the tide gate will be monitored continuously using automated gauges to ensure that levels consistently reach and maintain 2.5' feet NAVD88 during tidal operations.
    - Monthly inspections will be performed by the team throughout the year (January through December) to ensure the tide gate operates as intended.
        - Any debris or blockages affecting the gate's functionality will be cleared.
        - Mechanical parts will be serviced bi-annually to ensure smooth operation.
    - The team will conduct monthly monitoring of salinity and water levels throughout the year (January through December) to ensure brackish water levels are maintained.
    - The team will prepare the Water Level Monitoring section(s) of the annual Progress and Monitoring Report summarizing inspections, findings, and adaptive management activities, and will provide a general assessment of progress with recommendations to ensure that the Mitigation Project is advancing toward the intended result.
3. **Vegetation Monitoring:**
    - An overview assessment will be performed by the team in July, one month prior to the annual vegetation survey. Based on the evaluation of high resolution, continually updated aerials of the low salt marsh habitat complex, the placement of monitoring transects will be adjusted as needed to ensure they traverse through vegetated and representative portions of the complex. The team will work closely with the wetland scientist to determine the optimal transect (and corresponding quadrat) locations.
    - The annual vegetation survey inspection will be conducted by a wetland scientist or ecologist. The inspector will monitor and document parameters within the monitoring quadrats. The inspectors will evaluate if the Mitigation Project is advancing toward the intended result.
    - Comprehensive vegetation surveys will be performed once annually, in August.
        - The following parameters will be monitored at each quadrat.
            - Plant species occurring: Plant species occurring in each quadrat will be recorded.
            - Stem density: Randomly select one 0.25 m^2 corner of the 1.0 m^2 quadrat. Count all live stems of any plant species found within that section.

        - Plant height: Using the same quadrat randomly selected for stem density, measure all live stems of any plant species from the base of the plant to the top of the stem in meters.
        - Signs of disease, predation, or other disturbance: Monitor these signs in each quadrat and along the length of the transect.

- If AMP measures are implemented, the wetland scientist or ecologist in consultation with the team, will document each action taken in detail and monitor the resulting changes.
- The wetland scientist, ecologist, and/or team will prepare the Vegetation Monitoring section(s) of the annual Progress and Monitoring Report summarizing inspections, findings, and adaptive management activities, and will provide a general assessment of progress with recommendations to ensure that successional growth is advancing toward the intended result.

4. Invasive Species Monitoring:

- The team will perform rapid invasive species surveys during the growing season (May through October), before the planned mowing program, to track changes in species composition, particularly the enhancement of *Spartina alterniflora* and *Phragmites australis* regrowth rate and biomass reduction since the previous survey.
    - The rapid surveys will include visual estimates of percent vegetative cover of *Spartina alterniflora,* percent cover of invasive *Phragmites australis,* and bare soil present within each quadrat.
    - Plant community composition will be quantified by comparing the absolute coverage of invasive species (i.e., *Phragmites australis*), and the absolute cover of native species (i.e., *Spartina alterniflora*) with the total cover of all species within each quadrat.

- If AMP measures are implemented, the team will document each action taken in detail and monitor the resulting changes.
- The team will prepare the Invasive Species section(s) of the annual Progress and Monitoring Report summarizing inspections, findings, and adaptive management activities, and will provide a general assessment of progress with recommendations to ensure that the Mitigation Project is advancing toward the intended result.

5. Wildlife Monitoring:

- Wildlife presence will be documented during the annual vegetation survey conducted by the wetland scientist or ecologist.
- During inspections, the presence and/or evidence of native and migratory wildlife species including birds, mammals, reptiles, amphibians, crustaceans and, when possible, insects and macroinvertebrates will be assessed via direct observation. The inspector shall identify wildlife species found to be using the site and how they are using it (i.e., nesting, feeding, shelter, over-wintering, etc.).

- Taxonomic description of wildlife or evidence thereof will be noted as to species and general location within the mitigation areas. Anecdotal observations of wildlife utilizing the site will also be recorded and reported as part of the annual Progress and Monitoring Report.

- The inspector and/or team will prepare the Wildlife Monitoring section(s) of the annual Progress and Monitoring Report summarizing inspections and wildlife observations.

6. **Contingency Monitoring:**

   - The team will inspect the Mitigation Project site for damage after destructive events such as high-energy storms and flooding. Inspections will occur as-needed after such events and annually in early spring.
   - At areas within the site where damage is observed, a more detailed inspection plan will be developed to document and inform the need for structural repairs. If the integrity of the Mitigation Project wetlands is in question, a targeted water level and vegetation monitoring plan for the affected area will be developed in accordance with the protocols outlined in this Mitigation Plan.
   - In addition and as needed, the team will identify any loss or movement of soils within the mitigation areas, and will assess the causes of scour, erosion, or deposition. If necessary, the team will coordinate with the Applicants to visit the locations to identify options to mitigate the causes and provide recommendations for improvement.
   - Once corrections or repairs are completed, the Applicants, in consultation with the team, shall document conditions and prepare a memorandum summarizing the events, conditions and corrective actions for delivery to the regulators. The memorandum shall become part of the subsequent annual Progress and Monitoring Report.

5.6.6 Monitoring Scopes for the Creation Areas

1. **Vegetation & Invasive Species Monitoring (Annually in August):**

   - Conduct fixed-point photo documentation.
   - Conduct vegetation surveys using the fixed transect and quadrat method.
   - Record percent cover of *Spartina alterniflora* and any presence of invasive species (*Phragmites australis* or others).
   - Measure stem density and plant height of *Phragmites australis* within the quadrats.
   - Document signs of stress, disease, predation, or other disturbances affecting plant health.
   - If *Phragmites* or other invasives are present, document coverage and determine if adaptive management strategies (e.g., manual removal, selective treatment) are necessary.

2. **Erosion Monitoring (Twice a year, in the Spring & Fall):**

- Assess the functionality of tidal channels to ensure they remain clear and connected to the larger marsh system.
- Observe sediment movement, erosion, and signs of accretion within the marsh.
- Verify that tidal inundation patterns align with expected conditions to support low marsh habitat.

3. **Wildlife Observations (During Annual Vegetation Surveys):**
   - Document general wildlife usage, including bird, fish, and invertebrate activity within the created marsh.
   - Record signs of herbivory or predation on newly established vegetation.
4. **Post-Storm or Contingency Monitoring (As Needed):**
   - Conduct site inspections following significant storm events to assess any erosion, sediment loss, or structural instability.
   - Document any necessary corrective actions and report findings.

6. Long Term Management Plan (LTMP)

6.1 LTMP Overview

Upon the successful completion of the five-year mitigation and monitoring period (or longer if implementation of Adaptive Management Plan Phases One through Four in the Enhancement Areas becomes necessary), the Applicants will submit the final Progress and Monitoring Report for both the Enhancement Area and Creation Area mitigation projects. A Long-Term Management Plan will be developed at that time that describes how the Mitigation Projects will be managed after the Performance Standards have been achieved, including the long-term financing mechanism and the party responsible for the Long-Term Management. The Long-Term Management Plan will be developed in accordance with 33 C.F.R. § 332.7(d) and may include long-term management including maintenance and access of the tide gate, conservation easement enforcement, signage, fencing, non-native invasive species management, tax payments, maintenance of property insurance, and reporting.

The LTMP is intended to provide site-specific guidance for inspections, assessments, and management of the site to assure ongoing success of the proposed mitigation. The LTMP will consist of monitoring, assessment of the results of monitoring, and guidelines for management (if necessary) to ensure the long-term performance of the Mitigation Project.

See Section 9 of this document for Financial Assurance and Long-term Site Protection, to be finalized within the Final Plan.

6.2 Recommended Methods for Inspection and Assessment

The LTMP will provide The New HVN, LLC with a set of guidelines for inspection and long-term site assessments. The following recommended assessment goals/guidelines will be configured to the particulars of the Mitigation Site, including the following:

- Determine (as best as possible) the safety of the surroundings. Do not enter an unsafe area. Some initial assessment items may include fallen power lines, fallen trees, slope instability, or rising water levels that could trap an inspector;
- Inspect the site for damages. Document the results of the event. Determine the cause for failure (i.e., excessive erosion, plant death, slope failure);
- Remove debris and/or foreign matter from the area where possible;
- Determine if temporary or permanent benchmarks utilized during construction of the Mitigation Project are intact and are currently correct or if new benchmarks need to be set as necessary;
- Conduct an assessment of the existing conditions. Have conditions changed dramatically? Are the current conditions suitable to meet the original goals of the mitigation measure? Is ecological succession proceeding as intended?
- Produce a list of potential remedies for any observed disturbances or failures. Assess the potential impact and benefit of each remedy to determine if the net benefit will outweigh the potential impact.
- Select the remedy that will have the greatest benefit. Keep in mind that the remedy that has the greatest benefit may be the “do nothing” option if the remedy will provide a higher impact to existing resources than a benefit to future resources.
- Consult with all appropriate regulatory agencies to determine any other safety or construction practices that will be necessary to move forward for the selected remedy, and to confirm that the intended goals of the intervention are consistent with regulatory goals and guidelines.

6.3 Corrective Actions

Should a climate event or other disturbance occur after the five-year monitoring period, or if unsatisfactory progress is observed during site inspections and assessments listed above, then corrective actions will be designed and completed to address the unsatisfactory conditions or damages to the Mitigation Site. A Corrective Action Plan will be prepared to cover the proposed intervention, if warranted. The Plan will describe the disturbances, growth trajectories, the inspection actions that were completed, and the assessment that led to the selected corrective actions. If required, the corrective actions will be submitted to regulatory agencies for review.

In addition to encroachment by non-native plant species, unforeseen events could include sabotage or vandalism, earthquake, fire, plant community failure of unknown origin, insect damage, hurricanes, tornados, flooding, or similar natural disasters.

7. Mitigation Project Site

7.1 Mitigation Project Site Location

The Mitigation Site wetlands are located adjacent to the Proposed Project area, primarily the eastern and southern portions of the property and areas near Pig Farm Road and Uriah Street. In addition, there is a Mitigation Site wetland area located to the northwest of the Proposed Project area. Refer to Figure 1 Project Site wetlands mapped by FHI Studio and Figure 2 Mitigation Site wetlands mapped by McCue Environmental. These wetlands consist of forested, scrub-shrub, and emergent types, including *Phragmites*-dominated areas, and are adjacent to both developed Airport operations areas and disturbed uplands.

7.2 Current Owners

The Mitigation Site wetlands are entirely owned by the City of New Haven and are managed by the Tweed New Haven Airport Authority. The airport is currently leased for operations by The New HVN, LLC.

7.3 Current Land Use and Surrounding Land Use

Given that the Mitigation Project site wetlands are located adjacent to the Proposed Project Site, the current and surrounding land use is the same.

7.4 Mitigation Project Site Soils

The site soils are similar to those mapped for the Proposed Project Site. Soils within the Mitigation Project wetland areas primarily consist of hydric soils, including Walpole sandy loam, Scarboro muck, and Westbrook mucky peat, which support wetland functionality. Adjacent upland soils vary by location, with common types including Deerfield loamy fine sand, Udorthents-Urban Land Complex, and the Cheshire-Holyoke complex. Mitigation Site Soils are depicted in Figure 15 Mitigation Project Site soils. These are described below.

- **WF100 – WF194**: Hydric soils are primarily Walpole sandy loam and Westbrook mucky peat, while adjacent upland soils are Deerfield loamy fine sand and Udorthents-Urban Land Complex.
- **WF300 – WF384**: Westbrook mucky peat hydric soils with adjacent upland soils of Udorthents-Urban Land Complex.
- **WF400 – WF459**: Hydric soils include Westbrook mucky peat, with adjacent upland soils of Udorthents-Urban Land Complex and Udorthents, smoothed.
- **WF500 – WF714**: Sulfaquents hydric soils with soils underlying the delineated wetlands most closely resembling the Westbrook mucky peat; adjacent upland soils are Deerfield loamy fine sand, Penwood loamy sand, Cheshire-Holyoke complex, Penwood-Urban Land Complex, and Udorthents smoothed.
- **WF800 – WF941**: Sulfaquents hydric soils; upland adjacent soils include Holyoke rock-outcrop complex and Udorthents smoothed.

- **WF1000 – WF1347**: Hydric soils include Westbrook mucky peat and Gales Ferry silt loam, intertidal. Adjacent upland soils include: Udorthents-Urban Land Complex.

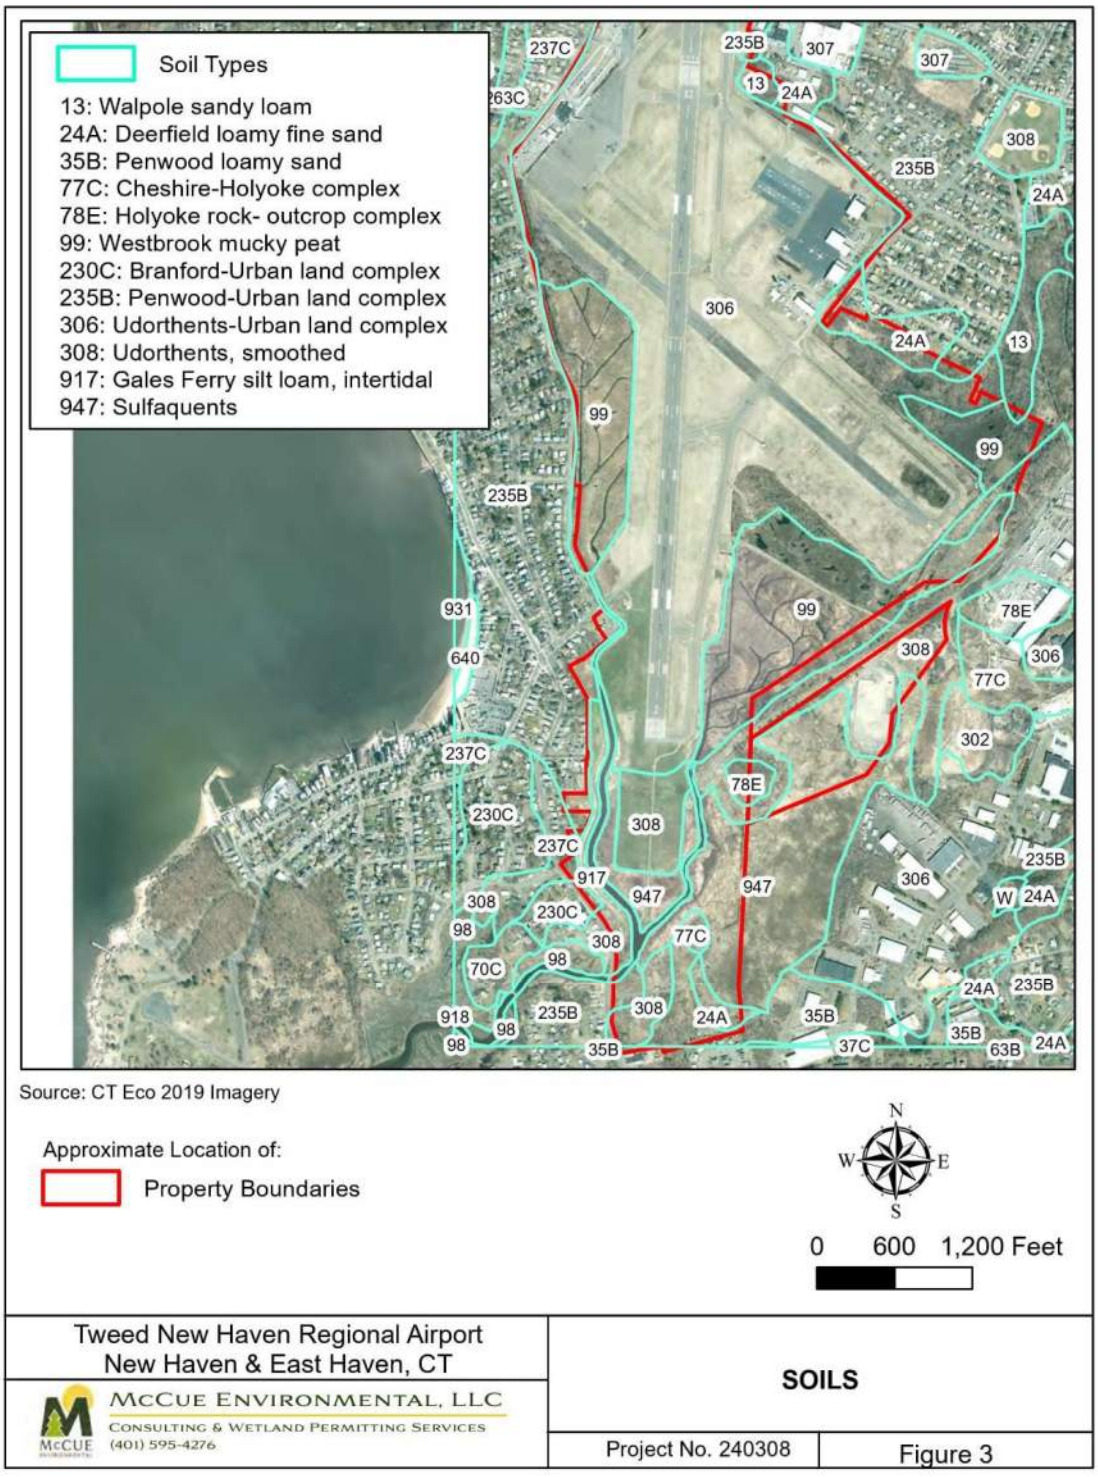

Figure 15 Mitigation Project Site soils

7.5 Mitigation Project Site Watershed & Hydrology

The salt marsh complex at the Mitigation Project site consists of a wetland system featuring excavated channels and marsh vegetation largely dominated by *Phragmites*. Expansive mudflat habitat is currently limited within the existing marsh complex. The Mitigation Project wetlands have varying hydrologic regimes, ranging from seasonally flooded, semi-permanently flooded, to irregularly flooded zones, depending on their location and proximity to disturbances.

These wetlands include a variety of Cowardin classification wetland types:

- **Forested Wetlands (PFO)**: Composed primarily of red maple and other deciduous species, these areas are seasonally flooded and form a significant part of the site's wetland network.
- **Scrub-Shrub Wetlands (PSS)**: These wetlands are dominated by species like arrowwood, pussy willow, and swamp azalea, often found along disturbed edges of the wetland areas.
- **Emergent Wetlands (PEM)**: Areas dominated by *Phragmites australis* and other emergent species, typically found in the more interior sections of the wetland areas. These are often semi-permanently or seasonally flooded.
- **Estuarine Emergent Wetlands** (E2EM): Estuarine intertidal emergent marsh areas. Additional descriptors indicate frequency of inundation and presence of *Phragmites australis*.

The following table includes a description of the Cowardin classifications for the observed Mitigation Site wetlands. See also Figure 16 Mitigation Project Site wetlands.

Table 8 Cowardin wetland classifications for Mitigation Site wetlands.

Wetland #	Cowardin Classification Code	Notes
WF100–WF19 North Area Delineation	PEM1/5F	Palustrine (P), Emergent persistent (EM1), Phragmites australis (5), Semi permanently Flooded (F)
	PFO1E	Palustrine (P), Forested (FO), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E)
WF300–WF384 North of Pig Farm Road	PEM1E	Palustrine (P), Emergent (EM), persistent (1), Seasonally Flooded/Saturated (E)
	PEM1/5F	Palustrine (P), Emergent persistent (EM1), Phragmites australis (5), Semi permanently Flooded (F)
	PSS1E	Palustrine (P), Scrub-Shrub (SS), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E)
	PUBH	Palustrine (P), Unconsolidated Bottom (UB), Permanently Flooded (H)

WF400–WF459 South of Pig Farm Road	E1UBLx E2EM1Pd PFO1E PSS1E	Estuarine (E), Subtidal (1), Unconsolidated Bottom (UB), Subtidal (L) excavated (x) Estuarine (E), Intertidal (2), Emergent persistent (EM1), Irregularly Flooded (P), Partially Drained/Ditched (d) Palustrine (P), Forested (FO), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E) Palustrine (P), Scrub-Shrub (SS), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E)

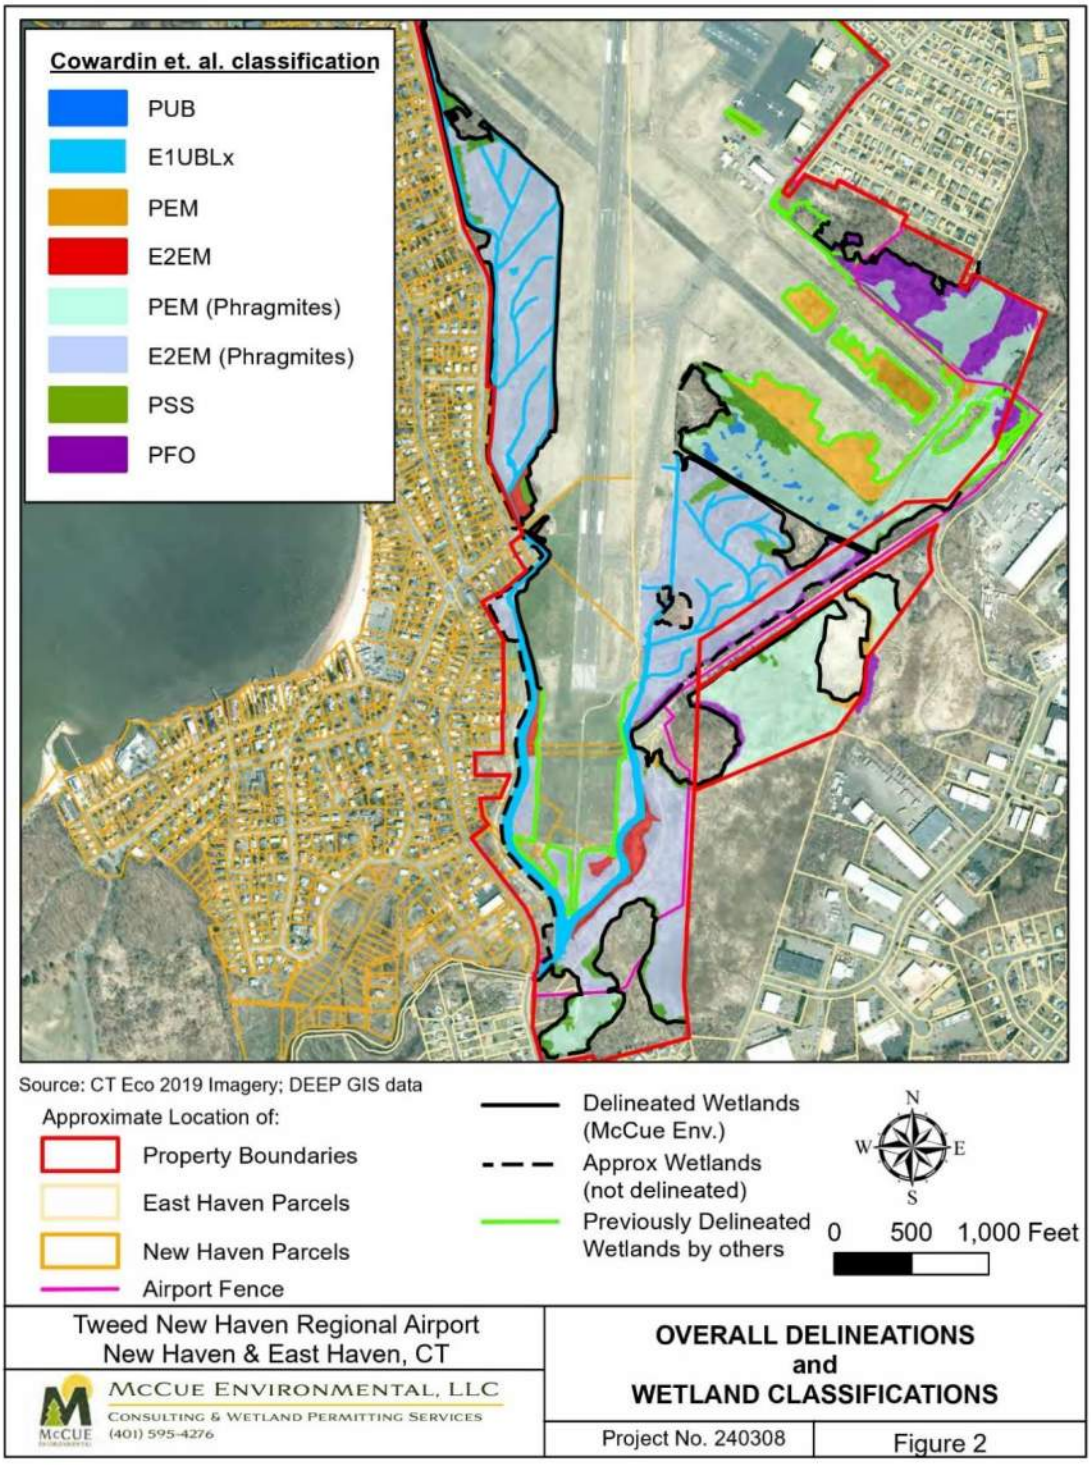

Figure 16 Mitigation Project Site wetlands

According to the CT DEEP Eco Viewer,[12] the 12-digit Hydrologic Unit for the Watershed Boundary Dataset for the Mitigation Project site is: HUC12: 020302030000; Name: Long Island Sound Deep.

7.6 Mitigation Project Site Vegetation

The Mitigation Project site includes areas of intertidal marsh vegetation, with plant communities adapted to fluctuating tidal conditions. Typically, in healthy, native marshes, species such as *Spartina alterniflora* (smooth cordgrass) dominate in addition to *Distichlis spicata* (saltgrass) and *Juncus gerardii* (saltmeadow rush) providing critical habitat for fish, shellfish, and bird species, as well as stabilizing sediments and enhancing water quality. However, throughout the Mitigation Project site at the Airport, these native wetland communities have been predominantly displaced by *Phragmites australis*, an invasive reed that dominates the wetlands, forming dense, tall stands that reduce plant diversity and alter marsh hydrology. *Phragmites* typically grows in thick monocultures, shading out other plants, reducing habitat quality for native wildlife, and altering natural tidal flow patterns, diminishing the overall resilience and ecological function of the marsh.

The upland areas proposed for tidal wetland creation include a mix of early successional and edge vegetation communities. These areas are located adjacent to existing tidal wetlands but remain outside the regular influence of tidal hydrology. Vegetation consists of a patchwork of upland woody and herbaceous species, including vines, saplings, shrubs, and young trees. These areas show signs of past disturbance, edge effects, and ecological fragmentation. The upland habitat slated for tidal wetland creation is not considered high-functioning, as it lacks the hydrologic connectivity, species composition, and structural diversity characteristic of more intact upland systems. The proposed conversion of these uplands into tidal marsh will transform these underperforming habitats into ecologically valuable systems that support coastal resilience, water quality enhancement, and habitat for estuarine wildlife.

An additional vegetation assessment was presented in a memo by BSC Group dated November 8, 2024, in response to an NDDB request (see Appendix F BSC Group Tide Gate Survey Results Summary). The following is a table listing the dominant and non-dominant vegetation at each tidal gate survey location (i.e., Table 2 within the Appendix F Results Summary). The tidal gate survey locations were sited by a senior botanist within the tidal marsh areas to experience an increase in water levels as a result of the Mitigation Project.

Table 9 Tidal gate survey locations and descriptions.

Location	Dominant Vegetation	Non-Dominant Vegetation
PP1	common reed (*Phragmites australis*)	climbing hempvine (*Mikania scandens*) multiflora rose (*Rosa multiflora*) poison ivy (*Toxicodendron radicans*), saltmarsh cordgrass (*Sporobolus alternifolorus*) Callery pear (*Pyrus calleryana*) small white aster (*Symphyotrichum racemosum*)
PP2	common reed (*Phragmites australis*)	climbing hempvine (*Mikania scandens*) poison ivy (*Toxicodendron radicans*) sawbrier (*Smilax glauca*)

PP14	common reed (*Phragmites australis*)	N/A
PP15	common reed (*Phragmites australis*)	N/A
PP16	common reed (*Phragmites australis*)	N/A

7.7 Mitigation Project Site Threatened and Endangered Species

The Natural Diversity Database (NDDB) query results identified several state-listed threatened and endangered species potentially present within the Mitigation Project area. These include a variety of plant species such as the yellow thistle (*Cirsium horridulum*), salt pond grass (*Leptochloa fusca* ssp. *fascicularis*), and field paspalum (*Paspalum laeve*), all of which rely on specific habitats like coastal grasslands, brackish ponds, and wet meadows. In addition, grassland birds such as the grasshopper

sparrow (*Ammodramus savannarum*), eastern meadowlark (*Sturnella magna*), and bobolink (*Dolichonyx oryzivorus*) are at risk, with sensitive breeding seasons that need careful consideration during project activities. The DEEP has requested species-specific plant surveys, consultation with fisheries biologists regarding aquatic species, and the finalization of a Grassland Bird Habitat Mitigation Plan to ensure the protection of these habitats during the sensitive periods of breeding and nesting.

Coordination with Bruce Williams Senior Fisheries Biologist, Diadromous Fish and Habitat Conservation and Enhancement Programs, Bureau of Natural Resources – Fisheries Division, DEEP, indicated that the three listed fish species on the NDDB report would not be present within the project area (Appendix C).

The proposed Wetland Mitigation Plan for the project area is designed to enhance the habitat for any state-listed species that is tidal marsh dependent by restoring native *Spartina*, improving hydrological conditions, and reducing invasive *Phragmites*. These actions are expected to provide significant benefits, particularly for plant species *Spartina alterniflora*, which depend on undisturbed tidal wetlands.

According to the BSC Group *Tidal Gates Results Summary* included as Appendix F, which included a 2024 Rare Plant Survey, no rare species were observed. According to the report:

> "No target species were observed in the Tidal Gate survey locations during the October 2024 surveys. Due to the moderate to heavy density of common reed in the survey areas, the habitat in these areas is unsuitable for any of the target species. Observations of the cover type during the survey indicate that areas to be impacted by tidal changes are currently 98% or more infested by common reed. Areas already experiencing more frequent tidal influence currently are comprised of 99% saltmarsh cordgrass (*Sporobolus alterniflorus [Spartina alterniflora]*). The areas currently experiencing consistent tidal influence only comprise a small percentage of the total area."

7.8 Mitigation Project Site Wetland Functions and Values

McCue Environmental performed a wetland functions and values assessment based on the methodology described in *Wetlands Functions and Values: A Descriptive Approach,* set forth in the supplement to The Highway Methodology Workbook (the Supplement) by the New England Division of the USACE (1999).[13] This method incorporates wetland science and best professional judgement in data collection toward a qualitative description of the physical and biological characteristics of the wetlands.

7.8.1 Groundwater Recharge and Discharge

The current capacity for groundwater recharge and discharge in the Airport site wetlands is somewhat limited due to disturbed hydrology and the dominance of invasive species like *Phragmites australis,* which can alter soil and water conditions. However, wetlands in the WF100, WF400/809, and WF500/600 series likely contribute to groundwater recharge by allowing water to percolate through the soil, particularly in areas with better hydrological connections and native vegetation. Wetlands in the WF300 series provide moderate recharge and discharge, though their smaller size and isolated nature limit this function.

[13] USACE, The Highway Methodology Workbook Supplement, https://www.nae.usace.army.mil/Portals/74/docs/regulatory/Forms/HighwaySupplement6Apr2015.pdf

7.8.2 Flood-flow Alteration

The wetlands targeted for the Mitigation Project exhibit varying capacities for flood-flow alteration, with some areas currently limited by degraded conditions and invasive species. Wetlands in the WF100 series already provide moderately high floodwater storage, but their potential is restricted by the presence of *Phragmites* and other invasive species. Wetlands in the WF300, WF500/600, and WF700/810 series offer moderate to high flood-flow alteration, but their capacity is diminished by disturbed hydrological conditions and the dominance of invasive vegetation. WF400/809 wetlands have high flood storage capability due to their size and location but could function more effectively with improvement. The mitigation strategy for the enhancement areas aims to expand floodwater retention across all these wetlands by improving hydrological connections and reintroducing native vegetation, allowing the wetlands to better absorb and release floodwaters, reducing the risk of downstream flooding.

7.8.3 Fish and Shellfish Habitat

The current wetlands targeted for mitigation provide limited value for fish and shellfish habitat, particularly due to their dominance by invasive species like *Phragmites* and the altered hydrology that reduces suitable habitat conditions. Wetlands in the WF400/809 and WF500/600 series are located near tidal areas and have some potential for supporting aquatic species, but the lack of diverse native vegetation and the presence of disturbances limit their ecological value. Additionally, many of these wetlands are too isolated or disturbed to effectively support fish and shellfish populations.

The mitigation strategy will greatly enhance the potential for fish and shellfish habitat by improving hydrological connectivity and native vegetation, particularly in the estuarine wetlands. By reintroducing native species such as *Spartina* and improving water flow between wetlands and adjacent watercourses, the enhanced wetlands will provide better breeding and nursery grounds for fish and shellfish. This will not only benefit aquatic species but also support the broader food web that depends on healthy wetland ecosystems.

7.8.4 Sediment/Toxicant/Pathogen Retention

Sediment and toxicant retention are key functions of these wetlands, though their current performance is impacted by invasive species and disturbed conditions. Wetlands in the WF100 and WF400/809 series currently demonstrate high retention of sediments and pollutants, as they are strategically located near impervious surfaces where they trap runoff. Wetlands in the WF500/600 and WF700/810 series also exhibit high sediment retention, though their long-term effectiveness is limited by degraded plant communities. Wetlands in the WF300 series provide moderately high retention, but improvements can be made through the proposed Mitigation Project. The proposed mitigation will increase the efficiency of nutrient cycling, pollutant filtration, and sediment stabilization by replacing invasive species with native plants, which are better suited for long-term retention and pollutant breakdown.

7.8.5 Nutrient Removal/Retention/Transformation

The wetlands currently provide moderate to high nutrient removal capabilities, but their effectiveness is hindered by the presence of invasive species, particularly *Phragmites australis*, which dominates many of the wetland areas. The WF100, WF400/809, and WF500/600 wetlands are particularly effective in capturing and processing nutrients from runoff and surrounding developed areas, though the overall ecological function is diminished by the poor-quality vegetation. The WF300 wetlands provide moderate nutrient retention, though their smaller size and degraded condition limit their efficiency. The proposed

Mitigation Project, which will involve the removal of invasive species and the reintroduction of native plants, will significantly improve nutrient cycling in these wetlands.

7.8.6 Production Export

The production export function, which refers to the movement of organic material such as leaf litter and plant detritus, is currently limited by the dominance of invasive species and disturbances. Wetlands in the WF400/809 and WF500/600 series produce substantial amounts of organic material, but the ecological value of this material is reduced by the prevalence of *Phragmites*, which provides less ecological benefit compared to native species. WF100 and WF300 wetlands offer some level of production export, but the quality and diversity of the organic material are low. The Mitigation Project will improve this function by enhancing the growth of native vegetation, which will produce more ecologically valuable organic material that can support the aquatic food chain and enhance overall ecosystem health.

7.8.7 Sediment/Shoreline Stabilization

Sediment and shoreline stabilization is an important function of these wetlands, particularly in areas where runoff from impervious surfaces carries sediments and pollutants. Wetlands in the WF100, WF400/809, and WF500/600 series are currently effective in trapping sediments and stabilizing shorelines, but the dominance of invasive species limits the long-term effectiveness of this function. WF300 wetlands provide moderate stabilization, but their small size and degraded condition make them less effective in preventing erosion and sediment transport. The proposed Mitigation Project efforts enhance sediment and shoreline stabilization by the regrowth of native plant species, such as *Spartina alterniflora*, which are more effective in trapping sediments and reinforcing shorelines than invasive species like *Phragmites*. By reducing the dominance of *Phragmites* and improving hydrologic connectivity, the enhancement will foster resilient plant communities that stabilize soils, reduce erosion, and filter pollutants from runoff.

7.8.8 Wildlife Habitat

While the wetlands provide some wildlife habitat, the overall quality is compromised by *Phragmites* and other invasive species, which limit biodiversity and habitat complexity. The WF100 and WF400/809 wetlands offer relatively high habitat value, but the presence of invasive species reduces their ability to support a wide variety of species. Wetlands in the WF300 and WF500/600 series provide moderate wildlife habitat but are similarly hindered by invasive plant dominance. Mitigation efforts will significantly improve wildlife habitat across all these wetlands by removing invasive species and allowing native vegetation to re-grow, creating diverse and ecologically rich habitats capable of supporting a diversity of species, including birds, amphibians, and aquatic organisms.

7.8.9 Recreation

Currently, these wetlands offer low recreational value due to their location on Airport property and their degraded conditions. However, the Mitigation Project will enhance the visual and ecological quality of the wetlands, creating opportunities for passive recreation outside of the Airport boundaries, such as birdwatching.

7.8.10 Education/Scientific Value

The wetlands targeted for enhancement and creation hold potential for scientific study, particularly in the areas of wetland hydrology, nutrient cycling, and biodiversity. Currently, the WF100, WF400/809, and

WF500/600 wetlands are valuable for research, but their degraded condition and the dominance of invasive species limit their full potential. The enhancement efforts will improve their educational and scientific value by improving their ecological function and making them prime examples of enhanced wetlands in an urbanized area. These wetlands will serve as useful sites for ongoing scientific research including but not limited to: the manipulation of a saline water inundation period as a *Phragmites* control method; wetland recovery; the role of native vegetation in supporting wildlife, and the management and control of stormwater volume within an Airport and wetland landscape.

7.8.11 Uniqueness/Heritage

The uniqueness of the wetlands is somewhat diminished by the presence of invasive species like *Phragmites*, but there is still potential for improvement. Wetlands in the WF100, WF400/809, and WF500/600 series are notable for their diverse plant communities, which will be further enriched through Mitigation Project efforts. These wetlands have the potential to become more ecologically unique once invasive species are removed and native plants are reintroduced, enhancing their value for conservation and improving their role in supporting rare or threatened species.

7.8.12 Visual Quality/Aesthetics

The visual quality of the wetlands is currently low due to invasive species and disturbances, but the proposed mitigation will significantly enhance their aesthetic value. The Mitigation Plan will replace monocultures of invasive species with a native plant tidal wetland community, improving the wetlands' scenic qualities. This will also make the wetlands more visually appealing for passive recreation.

7.8.13 Threatened or Endangered Species Habitat

The wetlands, particularly in the WF100, WF300, and WF400/809 series, hold potential habitat for endangered species, though the presence of invasive species limits their suitability. By enhancing native plant species and improving the overall ecological health of the wetlands, the Mitigation Plan will increase the likelihood that these areas can support endangered or rare species, contributing to broader conservation efforts.

7.8.14 Conclusion

The wetlands targeted for the Mitigation Plan currently provide important ecological functions, such as flood-flow alteration, sediment retention, nutrient removal, and wildlife habitat. However, these functions are significantly limited by the presence of invasive species, degraded hydrological conditions, and disturbances from surrounding airport infrastructure. The proposed Mitigation Plan will greatly enhance the ecological value of these wetlands. Increased frequency and depth of inundation will lead to the regrowth of native low marsh species, leading to more resilient wetlands capable of supporting biodiversity and improving water quality.

Overall, these improvements will benefit both the local environment and the broader watershed, creating healthier and more productive wetland systems.

7.9 Mitigation Project Planned Outcomes

7.9.1 Planned Hydrology

The proposed activities of controlling water levels at the Morris Creek Tide Gate are anticipated to result in significant hydrological changes, which will directly influence the reduction of *Phragmites australis* and

promote the growth of *Spartina alterniflora*. These changes will lead to a tidal regime that is better suited to support native salt marsh species.

Below is a detailed description of the expected changes to the hydrology:

1. Increased Tidal Flow and Water Level Elevation:

By opening the tide gate on the rising tide and closing it at 2.5 feet NAVD88, water from Long Island Sound will flow more freely into the upstream wetlands, increasing the overall water levels in these areas. The existing Mean High Water (MHW) elevation at the site is 2.85 feet NAVD88, and this controlled flooding will ensure the upstream areas remain inundated just below or around MHW. The increased tidal inundation will promote the growth and spread of *Spartina alterniflora,* a species adapted to higher salinity and tidal environments

2. Prolonged Periods of Submersion:

After the tide gate is closed, holding the water level at the 2.5 feet NAVD88 elevation for extended periods will result in sustained submersion of the wetland areas. This will extend the hydroperiod, or the duration of time the wetland is saturated or inundated with water, particularly in zones below the MHW elevation.

Phragmites australis is poorly adapted to these prolonged periods of higher salinity and submersion, which will weaken its competitive advantage. In contrast, *Spartina alterniflora*, which thrives in fluctuating tidal environments, will be better suited to capitalize on these new hydrological conditions.

3. Increased Salinity and Tidal Fluctuation:

The tidal water from Long Island Sound will gradually raise salinity levels in the upstream areas, increasing soil salinity over time. With high and low tides fluctuating between 2.85 feet and -3.35 feet NAVD88, the controlled tidal flow will create more variation in water levels and salinity. This environment will support the growth of salt-tolerant plants like *Spartina alterniflora*, which thrive in these brackish, tidal conditions.

4. Maintenance of Overland Flow and Tuttle Brook Flow:

The proposed tidal modifications will not disrupt the existing overland flow or the flow from Tuttle Brook. Freshwater inputs from these sources will continue, but the controlled tidal inflows from the tide gate will dominate the hydrological regime, creating a balanced brackish environment. This brackish condition will further limit the spread of *Phragmites australis* and support a more diverse wetland plant community, including native salt marsh species.

Refer to Appendix D Tidal Monitoring Analysis for contextual information on the planned hydrology for the Mitigation Project.

7.9.2 Planned Soils

No changes to the existing soils are planned as part of the enhancement activities for this Mitigation Project. The current soil conditions are deemed suitable for supporting the desired tidal wetland habitat,

given the anticipated changes in hydrology. The manipulation of water levels and salinity is expected to naturally improve soil conditions for the re-growth of native species like *Spartina alterniflora*, without the need for soil amendments or replacement. The existing soils have been found to be supportive of hydrophytic vegetation, and their chemical and physical properties are appropriate for sustaining the planned enhancement activities.

7.9.3 Planned Vegetation

The primary objective of the vegetation plan is to restore tidal wetland habitat by encouraging the growth of native plant species such as *Spartina alterniflora* and suppressing the invasive *Phragmites australis*. The re-growth of *Spartina* will be facilitated by adjusting the hydrology to favor brackish water conditions, which will naturally deter *Phragmites* dominance. For the creation areas, direct plantings will be implemented as part of the Mitigation Project, whereas in the enhancement areas, the desired vegetation is expected to recolonize once appropriate hydrological conditions are restored.

Monitoring will be conducted to ensure that native, salt-tolerant species increase in coverage, and any necessary adaptive management actions, such as selective planting or invasive species control, will be implemented as discussed in the AMP.

7.9.4 Planned Habitat Features

These hydrological modifications will create conditions that naturally suppress *Phragmites australis*, which prefers less tidal influence, and instead favor *Spartina alterniflora*, which thrives in more saline, tidally influenced environments. Over time, the increased tidal influence, salinity, and fluctuating water levels will shift the competitive balance in favor of native salt marsh species, resulting in enhanced biodiversity and improved ecological function of the wetlands.

7.9.5 Planned Buffers

At this time, no additional buffers are planned as part of the Mitigation Project. The focus of this Project is on tidal wetland enhancement and creation within the Airport boundaries. The proximity of the wetlands to developed or disturbed areas will be considered in the LTMP, but no new buffer zones are currently proposed as part of the Mitigation Project or the AMP. Should future monitoring indicate a need for additional protective buffers, adjustments will be considered as part of the adaptive management approach.

7.10 Mitigation Project Invasive Species Control Plan (ISCP)

The Mitigation Plan for this tidal wetland Mitigation Project inherently addresses invasive species control by employing a targeted inundation strategy to manage and reduce the presence of *Phragmites australis* (common reed), one of the most pervasive invasive species in New England wetlands. Through extended periods of saline water exposure, this approach leverages natural hydrologic processes to create conditions that inhibit *Phragmites* growth and promote the re-growth of native salt marsh vegetation, specifically *Spartina alterniflora*. Given this focused methodology, a separate Invasive Species Control Plan (ISCP) has not been included, as invasive species management is central to the design of this Mitigation Project.

The extended inundation of brackish water serves as both a preventive and active control measure against the spread and re-colonization of *Phragmites* and other potential invasive species. By modifying the wetland's salinity regime, the Mitigation Project creates an environment that is less conducive to

invasive species colonization while supporting resilient native plant communities. In addition to extended inundation, the Mitigation Project includes the twice annual mowing of *Phragmites* and the removal of the *Phragmites* above-ground biomass following each mowing to limit regrowth. The team referred to the "Guidelines for Disposal of Terrestrial Invasive Plants"[14] published by the University of Connecticut when drafting the Mitigation Plan. Invasive material will be bagged and disposed of offsite within a landfill and special care will be taken to wash off all equipment and gear to prevent the spread of *Phragmites*. Herbicide application is addressed within the Adaptive Management Plan and would only be implemented if the Mitigation Project's Performance Standards are not met. A selective spot treatment of herbicide specifically formulated for wetlands would be applied to the *Phragmites* in the fall, when the plant is transporting nutrients to its roots.

The Mitigation Plan also inherently addresses the risk of future invasive species colonization, considering both local and regional threats from species like *Phragmites* that commonly invade through mechanisms such as contaminated equipment or waterborne seed dispersal. By establishing a robust monitoring and adaptive management framework, the Mitigation Plan ensures early detection and response to any re-emergence of invasive species, allowing for adaptive control measures if necessary. This adaptive management approach enables targeted actions to be taken based on observed conditions. Furthermore, the Mitigation Plan ensures that no invasive or non-native species listed under the "Invasive and Other Unacceptable Plant Species" will be planted on the site, adhering to Appendix K of the USACE 2020 guidelines.

8. Determination of Credits

As part of the construction of the Proposed Project, approximately 9.31 acres of filling will be required within resource areas jurisdictional per the State of Connecticut General Statutes. Because the US Army Corps of Engineers (USACE) has determined that wetlands 4 and 5, which are PEM wetlands, are not Waters of the United States, the wetland impact that will require permitting under the USACE Individual Permit are 5.50 acres. Proposed Project impacts have been minimized to the greatest extent practicable, and unavoidable impacts (whether short-term or permanent) have been quantified as the basis for the Mitigation Project outlined in this Mitigation Plan. The proposed Mitigation Project compensates for the unavoidable impacts to freshwater inland wetlands.

The proposed mitigation strategy to address the Proposed Project Site impacts is as follows:

- The Applicants would undertake approximately **28.5 acres** of tidal wetland enhancement adjacent to the project area.

- The Applicants would undertake approximately **3.61 acres** of tidal wetland creation adjacent to the project area.

[14] Guidelines for Disposal of Terrestrial Invasive Plants, The Connecticut Department of Energy and Environmental Protection and the University of Connecticut, 2011, published on the Ecological Landscape Alliance website, https://www.ecolandscaping.org/09/landscape-challenges/invasive-plants/guidelines-for-disposal-of-terrestrial-invasive-plants/#:~:text=The%20best%20time%20to%20dispose,plants%20on%20site%20if%20possible

8.1 Compensatory Mitigation Requirements

According to the USACE 2008 Mitigation Rule, "Compensatory mitigation can be carried out through four methods: the restoration of a previously-existing wetland or other aquatic site, the enhancement of an existing aquatic site's functions, the establishment (i.e., creation) of a new aquatic site, or the preservation of an existing aquatic site."[15]

The proposed Mitigation Project will result in the enhancement of 28.5 acres of tidal wetlands.

In addition, the proposed Mitigation Project will result in the creation of 3.61 acres of tidal wetlands.

The Mitigation Project offsets impact to 9.31 acres of freshwater wetlands under the jurisdiction of the State of Connecticut and 5.50 acres under the jurisdiction of the USACE. These values meet the requirements set forth for the project by CTDEEP and exceed the compensatory mitigation ratios outlined by USACE, ensuring that the newly enhanced and created wetlands are of greater ecological value than the freshwater inland wetlands being impacted by the Proposed Project.

8.2 Mitigation Ratio Rationale

The proposed improvements will enhance **28.5 acres** and create **3.61 acres** of tidal wetland. As noted above, the Proposed Project will impact approximately 9.31 acres CT DEEP/5.5 acres USACE low quality palustrine habitat. This results in a compensatory mitigation ratio of 5:1 for the State of Connecticut and 5:1 for the USACE for the enhancement and 1:1 for the creation areas.

Following a review of the site's prior mitigation history, CT DEEP concluded that the proposed 28.5 acres of tidal wetland enhancement may be credited toward mitigation at a 5:1 ratio, offsetting 5.7 acres of impact. CT DEEP also determined that any remaining impact areas must be addressed through tidal wetland creation at a 1:1 ratio, resulting in an overall increase in wetland area. Additional details can be found in the CT DEEP memo dated February 21, 2025, included in Appendix C: Regulatory Communication.

Overall, the proposed tidal wetland enhancement and creation will provide higher functions and values than those provided by the wetlands impacted by the Proposed Project.

Typically, inland wetland impacts are mitigated with creation, restoration or enhancement of inland wetlands, however, in this unique situation the regulatory agencies recognized the opportunity to provide enhancement to the historically altered tidal wetland that surrounds the airport. Enhancing these wetlands to improved functionality will more than compensate for the impacts to what are currently mostly mowed in-field inland wetlands that have very limited functionality and no opportunity for that functionality to be enhanced even if the project were not to take place. Additionally, a small portion of the mitigation site will involve the creation of tidal salt marsh, further expanding the extent of functional wetland habitat. The location of wetlands 4, 5 and 6, within the boundary of an active airport, does not suggest future

[15] USACE 2008 Mitigation Rule, https://www.sac.usace.army.mil/Portals/43/docs/regulatory/Final_Mitigation_Rule.pdf

enhancement of these wetlands particularly since per FAA guidelines, wetlands within airports are not those which should be targeted to enhancement or restoration.

9. Financial Assurances

9.1 Financial Statement

TNHAA and The New HVN, LLC will provide sufficient financial assurance to achieve successful execution of this Plan and sufficient long-term protection of the mitigation areas pending further agency discussion and review of this Draft Plan. Details regarding this will be provided in the final Plan submittal.

9.2 Long Term Site Protection

Within 90 days of the date this permit is issued and prior to initiation of permitted work in aquatic resources, the permittee shall submit to the USACE and CT DEEP a draft of the deed restriction. Within 30 days of the date the USACE and CT DEEP approves this draft document in writing, the permittee shall execute and record it with the Registry of Deeds for the City of New Haven, the Town of East Haven and the State of Connecticut. A copy of the executed and recorded document will then be sent to the USACE and CT DEEP within 120 days of the date the Corps approves it. The deed restriction shall enable the site or sites to be protected in perpetuity from any future development and provide for access by the USACE and CT DEEP for compliance verification. For preservation as part of compensation, the deed restriction shall expressly allow for the creation, restoration, remediation and monitoring activities required by this permit on the site or sites. It shall prohibit all other filling, clearing and other disturbances (including vehicle access) on these sites except for activities explicitly authorized by the USACE and CT DEEP in these approved documents.

REMOVALS NOTES:

1. IT IS THE CONTRACTOR'S RESPONSIBILITY TO CHECK AND VERIFY ALL SITE CONDITIONS PRIOR TO COMMENCING WORK. ANY DISCREPANCIES BETWEEN INFORMATION SHOWN ON THE DRAWINGS AND ACTUAL FIELD CONDITIONS SHOULD BE BROUGHT TO THE ATTENTION OF THE ENGINEER IN WRITING, PRIOR TO THE COMMENCEMENT OF WORK.
2. THE EXISTENCE AND LOCATION OF EACH UNDERGROUND UTILITY IS NOT GUARANTEED AND UNDOCUMENTED CONDITIONS MAY EXIST. THE CONTRACTOR SHALL COORDINATE WITH THE APPROPRIATE DEPARTMENTS OF THE STATE OF CONNECTICUT FOR LOCATIONS OF UTILITIES NOT SHOWN ON THE BASE PLAN DRAWING INCLUDING, BUT NOT LIMITED TO, HIGH VOLTAGE ELECTRIC, ABANDONED STEAM LINES, ABANDONED WATER LINES, TELEPHONE, CABLES, ETC. STAKE OUT LOCATION OF ALL UTILITIES PRIOR TO COMMENCEMENT OF WORK. ANY UTILITY THAT IS DAMAGED DURING CONSTRUCTION ACTIVITIES SHALL BE REPAIRED AT THE CONTRACTOR'S EXPENSE.
3. THE CONTRACTOR MUST INSTALL EROSION AND SEDIMENT CONTROL MEASURES BEFORE THE START OF ANY REMOVAL ACTIVITIES AND MAINTAIN THEM UNTIL COMPLETION OF GRADING AND PLANTING OPERATIONS UNLESS OTHERWISE SPECIFIED.
   a. AN EXISTING FENCE AROUND THE PERIMETER OF THE AIRPORT SHALL SERVE AS THE SITE CONSTRUCTION FENCE.
   b. EXISTING ACCESS ROADS SHALL SERVE AS THE CONSTRUCTION ACCESS ROAD. THE FINAL CONSTRUCTION ACCESS ROUTE SHALL BE ESTABLISHED ON SITE AND APPROVED BY THE ENGINEER PRIOR TO THE CONTRACTOR COMMENCING WORK.
4. THE CONTRACTOR SHALL EXCAVATE TO AN ELEVATION OF APPROXIMATELY 1.00 FEET NAVD88 WITH THE SANDY PLANTING MEDIUM BEING PLACED TO AN ELEVATION OF APPROXIMATELY 2.00 FEET NAVD88 TO ACHIEVE TARGET ELEVATIONS FOR LOW MARSH VEGETATION. THE CONTRACTOR SHALL REMOVE ALL EXCAVATED MATERIAL FROM THE SITE AND LEGALLY DISPOSE OF AT A CT DEEP APPROVED FACILITY.
5. THE CONTRACTOR SHALL PROPERLY DISPOSE OF ALL DEBRIS FROM REMOVALS AT THE CONTRACTOR'S EXPENSE. ALL MATERIAL GENERATED BY REMOVALS PRESCRIBED IN THE CONSTRUCTION DRAWINGS SHALL BE HAULED FROM THE SITE AND DISPOSED OF AT A CT DEEP APPROVED FACILITY.
6. THE CONTRACTOR SHALL REMOVE AND DISPOSE OF ANY HAZARDOUS MATERIALS IN ACCORDANCE WITH LOCAL REGULATIONS AND AUTHORITIES HAVING JURISDICTION.
7. ALL AREAS OF THE SITE UTILIZED BY THE CONTRACTOR FOR TEMPORARY FACILITIES AND STAGING SHALL BE RESTORED TO THEIR ORIGINAL CONDITION OR BETTER.
8. STAGING AREA TO BE DESIGNATED PRIOR TO MOBILIZATION AND TO BE APPROVED BY THE ENGINEER.
9. MATERIAL, EQUIPMENT, OR VEHICLES SHALL NOT BE STOCKPILED OR PARKED WITHIN THE DRIPLINE OF ANY TREE.
10. THE CONTRACTOR SHALL TAKE EXTREME CARE TO PREVENT ANY DISRUPTIONS TO THE AIRPORT'S OPERATIONS AND SHALL ABIDE BY ALL APPLICABLE LOCAL, STATE, AND FEDERAL RULES AND REGULATIONS FOR WORKING WITHIN THE PROPERTY.

GENERAL NOTES

1. THE DEPTH AND DURATION OF THE TIDAL WATER INUNDATION WILL BE INCREASED WITHIN THE EXISTING *PHRAGMITES*-DOMINATED MARSH AREAS BY MODIFICATIONS TO THE TIDE GATE SOP IN ORDER TO CONVERT *PHRAGMITES* TO SALT MARSH COMPLEX . THE MITIGATION PROJECT GOAL IS TO ACHIEVE AN ENHANCEMENT AREA OF 28.5 ACRES OF TIDAL SALT MARSH COMPLEX. A TOTAL OF 36 ACRES OF RESTORED TIDAL SALT MARSH COMPLEX IS EXPECTED.
2. ELEVATION OF 2.5 FT NAVD88 IS DERIVED FROM MULTIPLE FIELD TOPOGRAPHIC SURVEYS, DRONE COLLECTED LIDAR DATA, AND ANALYSIS OF TIDAL ELEVATION DATA COLLECTED THROUGHOUT SEVERAL WETLAND LOCATIONS ACROSS THE AIRPORT SITE. REFER TO THE MITIGATION PLAN FOR FURTHER INFORMATION ON THE TIDAL MONITORING ANALYSIS. THE MAXIMUM INUNDATION ELEVATION SHALL BE 2.5 FT NAVD88 TO AVOID FLOODING THE AIRPORT RUNWAY SAFETY AREAS AND ADJACENT PROPERTIES.

LAYOUT AND GRADING NOTES

1. ALL ELEVATIONS ARE BASED ON THE NORTH AMERICAN VERTICAL DATUM, 1988 (NAVD 88).
2. NO CLEARING, EXCAVATION, GRADING, OR PLANTING SHALL BEGIN UNTIL ALL EROSION AND SEDIMENT CONTROL MEASURES HAVE BEEN INSTALLED.
3. THE CONTRACTOR SHALL PREVENT THE DEPOSITION OF MATERIALS ONTO ANY PUBLIC ROADWAY. ANY MATERIALS INADVERTENTLY DEPOSITED ONTO PUBLIC ROADWAYS SHALL BE REMOVED IMMEDIATELY.
4. THE CONTRACTOR SHALL VERIFY ALL EXISTING GRADES IN THE FIELD AND REPORT ANY DISCREPANCIES TO THE ENGINEER.
5. THE GRADING AND PLACEMENT OF THE SANDY PLANTING MEDIUM SHALL OCCUR IN TANDEM WITH PLANTING ACTIVITIES AT THE SITE.
6. UPON COMPLETION OF CONSTRUCTION, ALL ACCESS ROADS AND STAGING AREAS USED DURING EXCAVATION AND GRADING WILL BE RETURNED TO THEIR PRE-CONSTRUCTION CONDITIONS. ANY TEMPORARY INFRASTRUCTURE INSTALLED FOR CONSTRUCTION ACCESS WILL BE REMOVED, AND DISTURBED AREAS OUTSIDE OF THE CREATED MARSH FOOTPRINT WILL BE STABILIZED AS NECESSARY.

PLANTING PLAN - CREATION AREA ENLARGEMENT 3

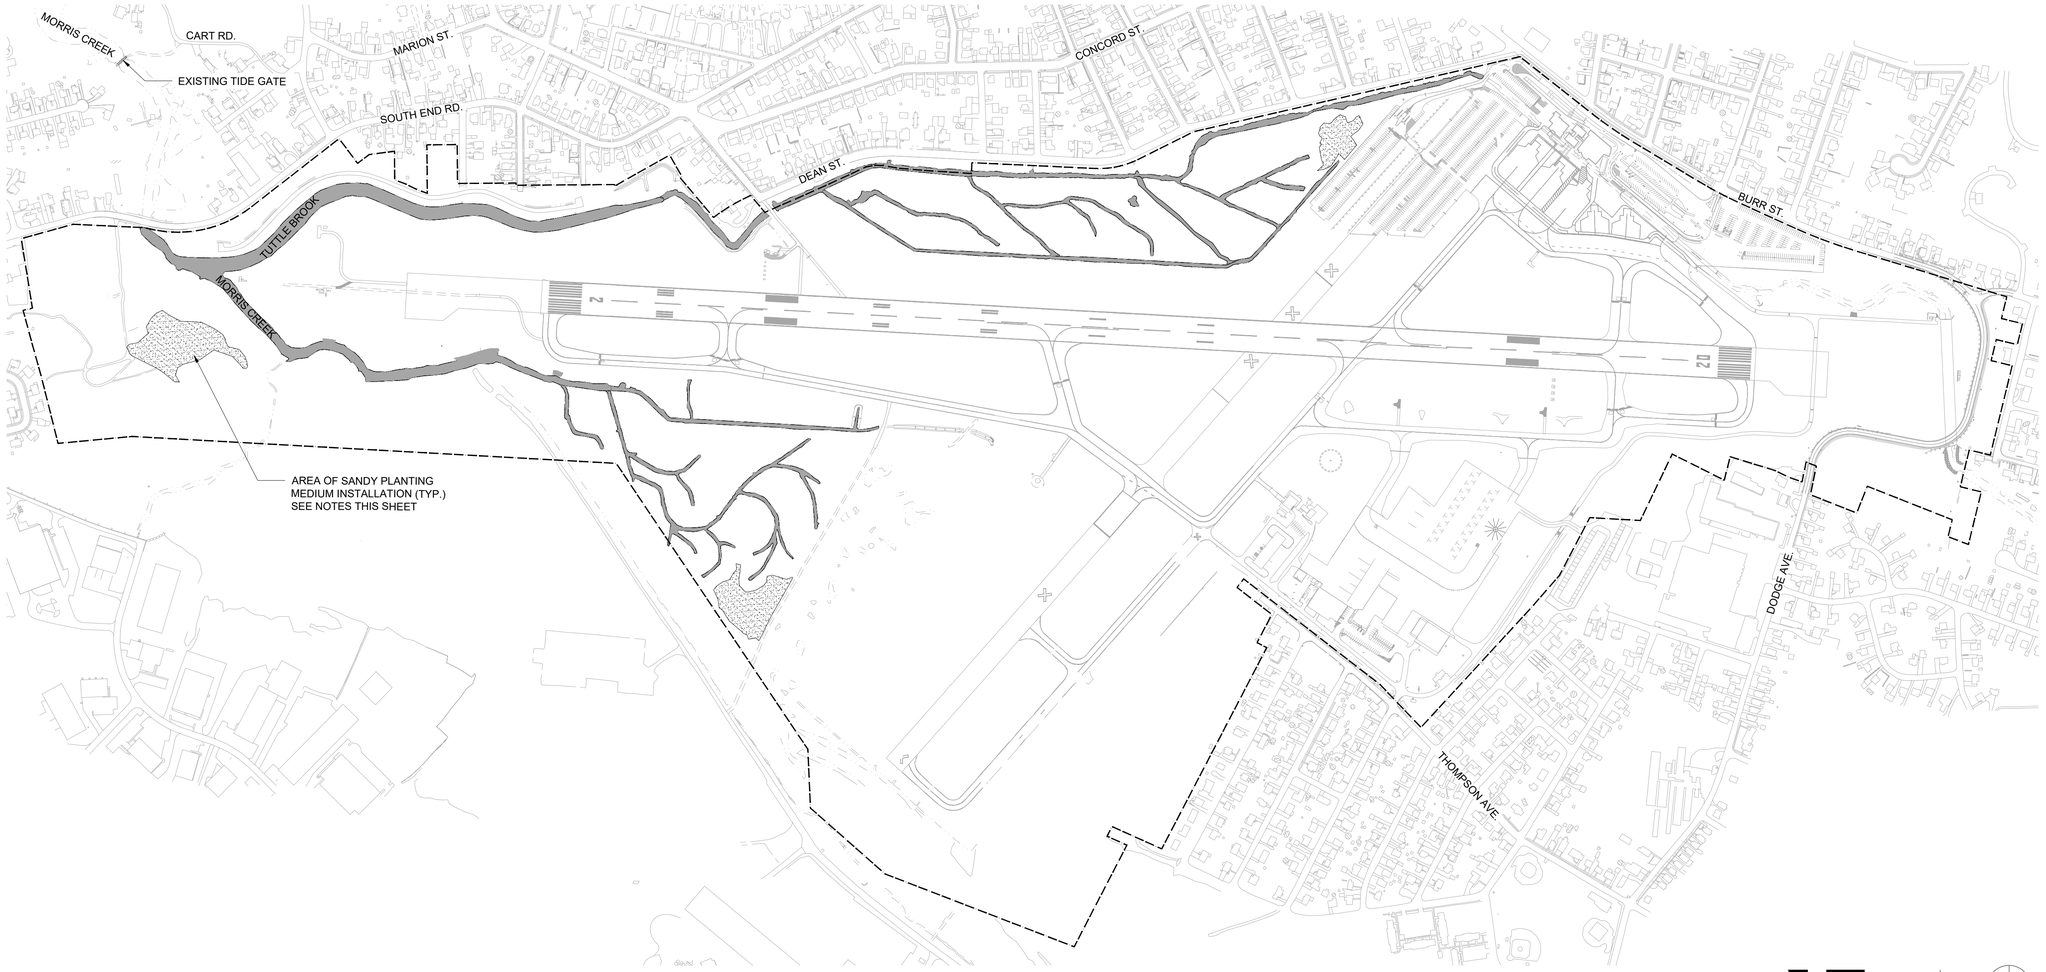
DATE	DRAWN BY	CHECKED BY

FORMAT ANSI D | SCALE 1" = 30'

SHEET NO. L-133 | SHEET



MATERIALS NOTES:

1. THE CONTRACTOR SHALL VERIFY ALL EXISTING SITE CONDITIONS. ANY DISCREPANCIES BETWEEN INFORMATION SHOWN ON THE DRAWINGS AND ACTUAL FIELD CONDITIONS SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER.

SANDY PLANTING MEDIUM NOTES:

1. THE CONTRACTOR SHALL FURNISH AND INSTALL A SANDY PLANTING MEDIUM THAT IS A DOMINANTLY SANDY SOIL WITH LOW PH, LOW ORGANIC MATTER CONTENT AND NUTRIENT LEVELS, AND LOW PERCENTAGE OF FINES. THE CONTRACTOR SHALL EXCAVATE TO AN ELEVATION OF APPROXIMATELY 1.0 FEET NAVD88 WITH THE SANDY PLANTING MEDIUM BEING PLACED AT AN ELEVATION OF APPROXIMATELY 2.0 FEET NAVD88 TO ACHIEVE TARGET ELEVATIONS FOR LOW MARSH VEGETATION.
2. THE SANDY PLANTING MEDIUM SHALL BE FREE OF CONSTRUCTION AND DEMOLITION (C&D) RUBBLE OF ANY KIND, INCLUDING CONCRETE, STONE, BRICK, TIMBER, COAL CINDERS, TAR RESIDUES, INCINERATOR ASH, GYPSUM, REFUSE, HARD CLODS, ROOTS, WEEDS AND WEED SEEDS, WOODY VEGETATION, STIFF CLAY, HARD PAN, SODS, LIME, CEMENT, SLAG, TARRED PAPER, BOARDS, CHIPS, STICKS, BOULDERS, HARMFUL CHEMICALS, OR OTHER ADVERSE MATERIAL TOXIC TO ANY VEGETATION USED ON THIS PROJECT.
3. THE GRADATION OF THE SANDY PLANTING MEDIUM SHALL BE DETERMINED BY A LABORATORY USING THE METHODS OF THE USDA SOIL SURVEY LABORATORY METHODS MANUAL (NO. 42, NOVEMBER 2004). SEE TABLE 1 ON THIS SHEET FOR GRADATION OF THE SANDY PLANTING MEDIUM AS DETERMINED BY USDA CLASSIFICATIONS.
4. SOIL ORGANIC MATTER CONTENT REQUIREMENTS: THE ORGANIC CONTENT SHALL BE LESS THAN 1% AS DETERMINED BY A LABORATORY USING THE LOSS OF IGNITION (LOI) METHOD.
5. SOIL PH REQUIREMENTS: THE PH VALUE OF SANDY PLANTING MEDIUM SHALL BE 5.0 - 6.8 AS DETERMINED BY AN APPROVED LABORATORY USING SOIL PH (WATER (1:1, V/V) PROCEDURES.
   a. AN ACID-PRODUCING SOIL TEST IS REQUIRED TO DETERMINE THE POTENTIAL FOR DECREASES IN SOIL PH AFTER OXIDATION. THE PH VALUE OF THE SOLUTION SHALL BE GREATER THAN 4.5 AS DETERMINED BY AN APPROVED LABORATORY USING THE ACID-PRODUCING (IRON SULFIDE) TEST CONDUCTED IN ACCORDANCE WITH THE METHODOLOGIES UTILIZED BY THE NORTHEAST COORDINATING COMMITTEE ON SOIL TESTING, NEC-67.
6. SOIL NUTRIENT REQUIREMENTS: THE VALUE FOR KJELDAHL NITROGEN SHALL BE AS OUTLINED BELOW AS DETERMINED BY AN APPROVED LABORATORY USING THE METHODOLOGIES OF THE "NORTHEAST COORDINATING COMMITTEE ON SOIL TESTING, NEC-67".
   a. KJELDAHL N: ACCEPTABLE RANGE IS 0.05% TO 0.10% (WITH NITRATE (NO_3) FORM OF NITROGEN NOT TO EXCEED 8 PPM).
   b. THE VALUE FOR MACRO- (P, K) AND MICRO-NUTRIENTS (MG, CA, MN, ZN, CU AND B) SHALL BE AS OUTLINED BELOW AS DETERMINED BY AN APPROVED LABORATORY USING THE PROCEDURES AS DESCRIBED IN THE *SOIL TESTING PROCEDURES FOR THE NORTHEASTERN UNITED STATES, 2ND EDITION, NORTHEAST REGIONAL PUBLICATION, AGRICULTURAL EXPERIMENT STATION, UNIVERSITY OF DELAWARE*, BULLETIN #493, 12/95.

P	ACCEPTABLE RANGE IS 10 LBS/ACRE TO 20 LBS/ACRE	K	ACCEPTABLE RANGE IS 30 LBS/ACRE TO 100 LBS/ACRE	CA	ACCEPTABLE RANGE IS 300 LBS/ACRE TO 2000 LBS/ACRE
MG	ACCEPTABLE RANGE IS 200 LBS/ACRE TO 300 LBS/ACRE	K+CA+MG	NOT GREATER THAN 2000 LBS/ACRE*	MN	ACCEPTABLE RANGE IS 2 PPM TO 10 PPM
B	ACCEPTABLE RANGE IS 0.8 PPM TO 2.3 PPM	CU	ACCEPTABLE RANGE IS 0.1 PPM TO 0.5 PPM	Z	ACCETABLE RANGE IS 1 PPM TO 4 PPM
% ORGANIC	<1% (BY LOSS ON IGNITION SOIL TESTING PROCEDURE)				

**TO ACCOUNT FOR SOIL VARIABILITY, SMALL DEVIATIONS WITHIN INDIVIDUAL POTASSIUM (K), CALCIUM (CA), AND MAGNESIUM (MG) LIMITS ARE PERMITTED PROVIDED THE TOTAL FOR THESE THREE NUTRIENTS DOES NOT EXCEED 2,000 LBS/ACRE. A 15% EXCEEDANCE LIMIT OF UP TO 2,300 LBS/ACRE OF THE TOTAL OF ALL 2,500 CY INTERVAL SOIL TESTS REQUIRED MAY BE PERMITTED. FOR EXAMPLE, IF A TOTAL OF 86 (2,500 CY INTERVAL) SOIL TESTS ARE REQUIRED, A MAXIMUM OF 13 (2,500 CY INTERVAL) COULD HAVE A TOTAL FOR K, CA, AND MG OF UP TO 2,300 LBS/ACRE.*

7. LABORATORY TESTING: THE CONTRACTOR SHALL FURNISH A CERTIFIED REPORT PERFORMED BY AN APPROVED LABORATORY SHOWING THE ANALYSIS OF REPRESENTATIVE SAMPLES OF THE SANDY PLANTING MEDIUM WHICH THEY PROPOSE TO USE. ALL SAMPLES ARE TO BE DELIVERED TO THE LABORATORY, AND THE PRICE BID SHALL INCLUDE INSPECTION AND LABORATORY CHARGES. SAMPLE RESULTS SHALL BE SUBMITTED 48 HOURS PRIOR TO THE DELIVERY OF SANDY PLANTING MEDIUM.
8. NO SOIL SHALL BE DELIVERED UNTIL THE APPROVAL OF SAMPLES, BUT SUCH APPROVAL SHALL NOT CONSTITUTE FINAL ACCEPTANCE. THE ENGINEER RESERVES THE RIGHT TO REJECT ON OR AFTER DELIVERY ANY MATERIAL THAT DOES NOT, IN THEIR OPINION, MEET THESE SPECIFICATIONS.

INTRODUCTION

Tweed New Haven Regional Airport (the "Airport") is a public airport located in the City of New Haven and Town of East Haven, CT, owned and operated by the City of New Haven (see **Figure 1, Overview Map** and **Figure 2, USGS Map** in **Appendix A**). The property is located along the New Haven-East Haven town-line with Long Island Sound approximately ¾-mile to the south, New Haven Harbor ¼ mile to the west, and Morris Cove approximately ¼-mile to the southwest. The Airport has two asphalt runways, Runway 2-20 which is approximately 5,200 feet long by approximately 150 feet wide oriented north-south, and Runway 14-32 (currently not in use) which is approximately 3,600 feet long by 100 feet wide with a northwest – southeast orientation.

According to field observations and a review of recent aerial photographs of the area, the Airport is set within a mixed residential, commercial, and industrial area. To the west of the Airport (between Dean Street and Townsend Avenue), land use is mostly residential whereas to the east (along Proto Drive and Commerce Street), it is mostly industrial. There is undeveloped land (wetlands) to the south of Runway 2-20 and to the southeast of the HVN property boundary.

Taxiways, aprons, parking lots and access driveways comprise the other paved areas on the airport property. Buildings include a terminal building and hangars housing planes and offices for private air carriers and other airport related businesses along with airport maintenance and operations structures including a fire and rescue building. Areas interior to and surrounding the runways and taxiways are comprised of mowed/maintained grasslands. Along the southwestern, southern, and southeastern perimeter of the airport are extensive vegetated tidal wetland systems with constructed channels and areas of open water. Inland wetlands occur at the northwestern, northern, northeastern, and eastern edges of the runway and taxiway areas. Some of the inland wetland areas appear to have been constructed as drainage features as they do not appear on United States Fish and Wildlife Service (USFWS) National Wetland Inventory (NWI) or CT Department of Energy and Environmental Protection (CTDEEP) wetland mapping. Previous wetland delineations by others did not identity wetland resources within these infield areas (ie where Wetlands 4 and 5 and a portion of Wetland 6 were delineated under this field survey). Wetlands 4 and 5 may be viewed by the USACE as isolated and thus may not be subject to USACE jurisdiction. A request for a jurisdictional determination is recommended for these wetlands.

HVN proposes multiple projects to continue advancing the Airport Master Plan Update, including the development of a new terminal area and a runway extension. The Tweed New Haven Airport Authority is preparing an Environmental Assessment for the project in accordance with the National Environmental Policy Act (NEPA) to implement elements of its Airport Master Plan. The wetland and watercourse delineation will be used to inform the NEPA process and permitting requirements.

METHODOLOGY

Historically impacted inland wetlands (some presumably man-made and offering limited functions and values) and one tidal wetland were delineated by FHI Studio soil scientists within the project areas in accordance with State and federal definitions and guidelines.

Tidal wetland limits were delineated in accordance with the State of Connecticut General Statutes (CGS) Section 22a-29 (Tidal Wetlands). Tidal wetlands are "…those areas which border on or lie beneath tidal waters, such as, but not limited to banks, bogs, salt marsh, swamps, meadows, flats, or other lowlands subject to tidal action, including those areas now or formerly connected to tidal waters, and whose surface is at or below an elevation of one foot above local extreme high water; and upon which may grow or be capable of growing…" tidal vegetation.

In 2012, the Connecticut General Assembly passed Public Act No. 12-101, which included a revision to the State's regulatory jurisdiction under CGS Section 22a-359. This revision changed the regulatory jurisdiction limit from the "high tide line" to the area up to and including the elevation of the "coastal jurisdiction line" (CJL) as determined for the State's major tidal waterbodies. The CJL is not delineated in the field, but is a set elevation for each municipality. It also states under CGS Section 22a-359, "For any tidal, coastal or navigable waters of the state located upstream of a tide gate, weir, or other device that modifies the flow of tidal waters, the coastal jurisdiction line for such tidal, coastal or navigable waters shall be the elevation of mean high water as found at the downstream location of such device".

Under CGS Section 22a-39 the identification of Connecticut-regulated inland wetlands is determined by the limit of any of the soil types designated as poorly drained, very poorly drained, alluvial, or floodplain by the National Cooperative Soils Survey, of the Natural Resources Conservation Service (NRCS) of the United States Department of Agriculture (USDA) (§22a-38-15) that are not subject to CGS Section 22a-29 as defined above. NRCS soil surveys were consulted to compare observed soil types to those mapped in the project area. The *Field Indicators for Identifying Hydric Soils in New England Version 4* (2018) and *Field Indicators of Hydric Soils in the United States, Version 8.2* (2018) were used to identify hydric soils, which include both poorly and very poorly drained soils.

Identification of watercourses, as regulated by Connecticut, was based upon the definitions contained in Section 22a-38 of Chapter 440 of the Connecticut General Statutes of Connecticut; including the following hydrological systems under the term "watercourse": rivers, streams, brooks, waterways, lakes, ponds, marshes, swamps, bogs, and all other bodies of water, natural or artificial, vernal or intermittent, public or private.

The Ordinary High Water (OHW) mark as defined by the USACE for the purposes of the Clean Water Act (CWA) lateral jurisdiction at 33 CFR 328.3€ is the "line on the shore established by the fluctuations of water and indicated by physical characteristics such as clear, natural line impressed on the bank, shelving, changes in the character of soil, destruction of terrestrial

vegetation, the presence of litter and debris, or other appropriate means that consider the characteristics of the surrounding areas". The OHW mark was flagged with sequentially labeled blue flagging and is considered the lateral extent of Federal jurisdiction over non-tidal Waters of the United States (US) in the absence of adjacent wetlands.

Federal wetlands, both tidal and inland, were delineated based on the United States Army Corps of Engineers (USACE) 1987 *Wetland Delineation Manual* and the USACE 2012 *Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region – Version 2.0*. Federal wetland boundaries were determined by the presence of dominant hydrophytic vegetation, presence of hydric soils, and evidence of wetland hydrology. In tidally influenced areas, the USACE regulates up to the high tide line (HTL) elevation. USACE Wetland Determination Data Forms were not completed for tidal resource delineations, since the wetlands are tidal, and jurisdiction is defined by the HTL elevation. USACE Field Documentation Forms for the delineated inland wetlands are provided in **Appendix C**.

The limit of the wetland delineation fieldwork was confined to distinct project areas where activities are likely to be proposed at the Airport (see Figures 1 and 2). Field work was conducted over several site visits conducted between August and October 2021. The wetland/upland boundary was marked in the field using consecutively numbered flags, and the locations of the flags were recorded by FHI Studio using a GPS unit capable of achieving sub-meter accuracy (note that FHI Studio is not a licensed surveyor) and subsequently located and documented by a licensed land surveyor. Wetland functions and values were documented in accordance with the USACE *Highway Methodology Supplement* (1999) guidelines (see **Appendix B**). Photographs were taken at representative locations in the wetlands and are included in **Appendix D**.

RESULTS

Seven wetland systems were delineated in the field, numbered 1 to 7 from north to south, within the areas of investigation (see **Figure 3, Wetland Map** in **Appendix A**). Wetlands 1 – 6 are inland wetlands. Wetland 7 is a tidal wetland - a good portion of which, within the project area, has been subject to past alterations and disturbance related to the relocation of Morris Creek sometime prior to 2010. A tide gate is located southwest of Wetland 7, which likely regulates the amount of tidal flow to wetlands upstream of the tide gate.

All wetlands lie within the Southcentral Coast Major Basin No. 5, regional basin 50 and subregional basin 5000 and drain ultimately to Long Island Sound via Morris Creek. Wetland System No. 1 drains west to Tuttle Creek (a tributary of Morris Creek) in Local Basin Number 5000-45 (CT Environmental Conditions Online, Advanced Viewer, 2021). Wetland 7 and a portion of the southwestern limits of Wetland 6 drains to this same basin series. Wetlands 2-5 and a majority of Wetland 6 drain to the east and southeast to Morris Creek in Local Basin Number 5000-46 (CT Environmental Conditions Online, Advanced Viewer, 2021). The confluence of these two drainages lies immediately south of the Airport. The CJL elevation for New Haven is 4.6 feet

NAVD88, while that of East Haven is 4.5 feet NAVD88. According to information provided in an Environmental Assessment for the Taxiway and Drainage Improvement Project, "the CJL for the wetland within the Tweed Airport boundary above the tide gate on Morris Creek is 3.5' NGVD. All wetlands below this elevation for the purpose of the project are considered tidal, and they are therefore under the jurisdiction of CTDEEP.

General descriptions of these seven wetlands are provided below, with additional detailed information for each wetland in **Table 1**.

Wetland 1 is located at the northwestern limit of the airport. It contains a reach of Tuttle Brook and associated bordering vegetated wetlands. The reach of Tuttle Brook originates at a double box culvert (through which Tuttle Brook is conveyed underneath Dodge Avenue) and extends approximately 1,200 linear feet southerly downstream before entering another double box culvert underneath a service road to the airport that is accessed off Dodge Avenue in New Haven. The reach of Tuttle Brook within the project area is best classified as a Riverine Lower Perennial Watercourse characterized by an unconsolidated bottom dominated by sand and organic matter substrate(R2UB2/4). Only the northern-most reach of Tuttle Brook was delineated within the airport boundary. OHW flags were hung in the field to demarcate the limits of Tuttle Brook. The bordering vegetated wetlands along Tuttle Brook consists largely of stands of palustrine emergent persistent vegetation (e.g., Broad-leaved Cattail and Common Reed *Phragmites australis*-dominated stands - PEM1/5. Woody shrubs consisting primarily of American Black Elderberry and an alder sp., occur sporadically.

Wetland 2 is located at the northeastern limit of the airport in the area between the General Aviation Parking and the East Ramp. It consists of a palustrine forested, broad-leaved deciduous, seasonally flooded/saturated, and ditched wetland system (PFO1Ed) with a small palustrine emergent *Phragmites australis*-dominated inclusion that appears to be permanently flooded (PEM5H). Characteristic vegetation includes Red Maple, Black Gum, and Pin Oak in the tree layer, Northern Spicebush and Sweet Pepperbush in the shrub layer. *Phragmites* flanks most of the ditched portion of the wetland in the herbaceous layer.

Wetland 3 is located adjacent to the mowed areas between the Air Traffic Control Tower and the East Ramp's tarmac. It consists of a palustrine emergent, nonpersistent, intermittently flooded/saturated (PEM2J) wetland that collects sheet flow runoff and direct precipitation. It is characterized by Soft Rush, Water Purslane, Broom Sedge, a spike rush sp., and various other rushes, sedges, and hydrophytic grasses (incl. the state-threatened *Paspalum laeve*).

Wetland 4 is a shallow drainage area located north of Runway 32 which forms its southwestern boundary. It is bounded by Taxiway C on the northeast side, and Taxiway H on the southwest side. Wetland 4 consists of a palustrine emergent, nonpersistent, intermittently flooded/saturated (PEM2J) wetland. It is dominated by various species of hydrophytic plant species such as Soft Rush, Straw-colored Sedge, Curly Dock, Calico Aster, and the state-threatened Field Beadgrass. This wetland receives sheet flow runoff from the surrounding

impervious runways and tarmacs. A catch basin serves as the outlet that regulates the surface water level of the wetland when it receives collected stormflows. Based upon its morphology and drainage structures, it appears that this wetland has formed within a drainage area that was constructed with the adjacent Runway 14/32 and Taxiways Band C were built. While it is a routinely mowed lawn, since Runway 14/32 has not been used for years, routine maintenance of the basin has waned which may have allowed for the development of hydrophytic plant community. A suspected high groundwater table in this area may support these hydrophytes. Functions and values are low for this wetland.

Wetland 5 is a similar shallow drainage area bounded by Taxiway C on the northeast and southeast sides, Taxiway H on the northwest side and former Runway 32 on the southwest side. It consists of a palustrine emergent, nonpersistent, intermittently flooded (PEM2J) wetland that also collects sheet flow runoff and direct precipitation. Hydrophytic vegetation observed within this wetland included the following: Soft Rush, Strawcolored Flatsedge, Field Beadgrass, Long-leaved Redtop Panicgrass, Rough Barnyardgrass, Spike Rush, Sharp-fruit Rush, Marsh Seedbox, Swamp Smartweed, Common Threesquare, Yellow Bristlegrass, and Calico aster. A catch basin serves as the outlet that regulates the surface water level of the wetland when it receives stormflows. Based upon its morphology and drainage structures, it appears that this wetland may have also formed within a drainage area that was constructed with the adjacent Runway 14/32 and Taxiways Band C were built, similar to Wetland 4. Similarly, while it is a routinely mowed lawn, since Runway 14/32 has not been used for years, routine maintenance of the basin has waned which may have allowed for the development of a hydrophytic plant community. During field work, high levels of standing water were observed in this catch basin, which may indicate high groundwater levels in this area. Functions and values are low for this wetland.

Although a contiguous wetland system, Wetland 6 is characterized by two different wetland types. Wetland 6A consists of palustrine emergent wetlands within a mowed lawn airfield. Wetland 6B consists of a palustrine forested broad-leaved deciduous, seasonally saturated, wetland (PFO1E), and bordering palustrine emergent wetlands (PEM2) containing non-persistent, persistent and Phragmites-dominated subclasses. An upper reach of Morris Creek bisects the PFO portion of this wetland east of Taxiway C and Runway 32. Sheet flow runoff from the adjacent runways and taxiways and direct precipitation contribute to the hydrology of this wetland, however portions of the wetland are transected by permanently flooded / excavated channels lending evidence of a suspected high groundwater elevation. Seasonal flooding along Morris Creek also likely contributes to the sustaining hydrology of the wetland. Red Maple dominates the PFO portion, while *Phragmites* has significant cover in the PEM portion. Other hydrophytes noted included the following: Northern Spicebush, Highbush Blueberry, Winterberry, Northern Arrowwood, Sweet Pepperbush, Common Reed, Purple Loosestrife, Steeplebush, Spotted Joe Pye-weed, Flat-top Goldenrod, Boneset, and Spike Rush east of Taxiway C (Wetland 6B). To the west of the former runway 14/32 within the mowed portion of the RSA (Wetland 6A), the wetland is dominated by Field Beadgrass, Spike Rush, Brownish Beakrush, and

Yellow Bristlegrass. Functions and values are low for the 6A portion of the wetland due to its maintained nature. Functions and values are slightly higher for the 6B portion of the wetland.

Wetland 7 consists of an estuarine intertidal emergent persistent / *Phragmites*-dominated system (E2EM1/5) bordering estuarine subtidal creeks (Morris Creek and Tuttle Brook) with unconsolidated bottoms and irregularly flooded tidal regimes E1UBL. The tidally influenced dominant vegetation of this wetland includes *Phragmites australis* (an invasive plant species) and several halophytic grasses (e.g., *Spartina alterniflora, Spartina patens, Distichlis spicata,* etc.). The wetland is bordered by a zone of *Baccharis halimifolia* shrubs.

The wetland ID/flagging sequence, wetland type, soil type and characteristic vegetation of each of the seven delineated wetlands is summarized in **Table 1**. Additionally, the United States Fish and Wildlife Service (USFWS), National Wetland Inventory (NWI) map is provided as **Figure 4 in Appendix A**, and the United States Department of Agriculture's Natural Resource Conservation Service (NRCS) Soils Map is provided as **Figure 5 in Appendix A.** Most of the project area is located within the 100-year floodplain limits. The Federal Emergency Management Agency (FEMA) floodplain map is provided as **Figure 6** in **Appendix A**.

NRCS MAPPED AND OBSERVED SOILS

The mapped NRCS soils and observed soils on, and in the vicinity of, the study area are depicted by their soil number on **Figure 5** in **Appendix A**. The mapped NRCS soils and observed soils within the study area are listed in **Table 2** along with their drainage class and NRCS official soil series description.

CONCLUSION

Six of the seven wetlands (Wetland Nos. 1 through 6) delineated among the various project areas on the site are considered inland wetlands and watercourses and were delineated accordingly. The state and federal jurisdictional limits of these six wetlands are coincident. One wetland system (Wetland No. 7) is subject to tidal influence and contains one or more species of tidal wetland vegetation. Thus, Wetland No. 7 is considered a tidal wetland in accordance with the State of Connecticut definition and, as such, is regulated under CGS Section 22a-29 (Tidal Wetlands). These tidal wetlands are also regulated by the USACE. Wetland 1, Wetland 7, and a portion of Wetland 6 drain to the south to Tuttle Brook, a tributary to Morris Creek, which in turn drains to Long Island Sound south of Morris Cove in New Haven, CT. Wetland 3 appears to be an isolated wetland with no apparent direct hydrologic connection to other site wetlands unless it connects through a submerged culvert that was not readily observable at the time of our delineation. Wetlands 4, 5 and a portion of Wetland 6 drain to the southeast – either directly (i.e., via excavated channel) or indirectly (via groundwater discharge) – to an extensive interspersed wetland transected by Morris Creek. In regards to Wetlands 3, 4, and 5, which are

presumed to be constructed drainage areas, one or more of these wetlands may be viewed by the USACE as isolated and thus may not be subject to USACE jurisdiction. A request for a jurisdictional determination is recommended for these wetlands.

Wetland 1 (OHWA1-A33; OHWB1-B11; E1-E48)	R2UB2/4 and PEM1/5	A relocated reach of Tuttle Brook flanked by bordering vegetated wetland dominated by emergent persistent vegetation.	Walpole (Poorly Drained) and Scarboro (Very Poorly Drained)	Sediment/Toxicant Retention Nutrient Removal Production Export	*Sambucus nigra* (FACW) *Alnus sp.* *Phragmites australis* (FACW) *Typha latifolia* (OBL) *Onoclea sensibilis* (FACW)
Wetland 2 (H1-H32)	PFO1Ed and PEM5H	Red Maple swamp adjacent to an excavated channel that drains easterly and is flanked by stands of Phragmites	Walpole (Poorly drained) and Aquents (poorly drained fill materials)	Sediment/Toxicant Retention Nutrient Removal	*Acer rubrum* (FAC) *Nyssa sylvatica* (FAC) *Quercus palustris* (FACW) *Clethra alnifolia* (FAC) *Lindera benzoin* (FACW) *Vaccinium corymbosum* (FACW) *Phragmites australis* (FACW)
Wetland 3 (B1-B14)	PEM2J	Shallow basin dominated by gramminoids	Aquents (poorly drained fill materials)	Sediment/Toxicant Retention	*Juncus effusus* (OBL) *Juncus tenuis* (FAC) ***Paspalum laeve* (FAC)** *Symphyotrichum lateriflorum* (FAC) *Ludwigia palustris* (OBL)
Wetland 4 (F1-F20)	PEM2J	Routinely mowed lawn area bounded by Taxiway C on the northeast side, and Taxiway H on the southeast side. Low depression with	Aquents (poorly drained fill materials)	Sediment/Toxicant Retention	*Juncus effusus* (OBL) *Cyperus strigosus* (FACW) *Rumex crispus* (FAC) ***Paspalum laeve* (FAC)** *Symphyotrichum lateriflorum*

Wetland ID (flagging sequence)	Wetland Type [a]	General Description	Soil Type (drainage class)	Principal Functions and Values of the Wetland	Characteristic Vegetation (indicator status) [b]
		suspected high groundwater table.			(FAC)
Wetland 5 (G1-G48)	PEM2J	Routinely mowed lawn area bounded by Taxiway C on the northeast and southeast sides, Taxiway H on the northwest side and former Runway 32 on the southwest side. Low depression with high groundwater table.	Aquents (poorly drained fill materials)	Sediment/Toxicant Retention Production Export	*Juncus effusus* (OBL) *Cyperus strigosus* (FACW) ***Paspalum laeve* (FAC)** *Coleataenia longifolia* ssp. *longifolia* (FACW) *Echinochloa muricata* (OBL) *Eleocharis obtusa* (OBL) *Juncus acuminatus* (OBL) *Ludwigia palustris* (OBL) *Persicaria hydropiperoides* (OBL) *Schoenoplectus pungens var. pungens* (OBL) *Setaria pumila* ssp. *pumila* (FAC) *Symphyotrichum lateriflorum* (FAC)
Wetland 6 (A1-A121; D1-D50; D51-D62 & D63 to D-88)	PFO1E PEM2	Forested and scrub-shrub wetland (6B portion) and bordering mowed lawn area (6A portion) transected by permanently flooded excavated channel. Low depressions with apparent high groundwater table in mowed areas.	Aquents (poorly drained fill materials)	Sediment/Toxicant Retention	*Acer rubrum* (FAC) *Lindera benzoin* (FACW) *Vaccinium corymbosum* (FACW) *Ilex verticillata* (FACW) *Viburnum dentatum* (FAC) *Clethra alnifolia* (FAC) *Phragmites australis* (FACW)

Wetland ID (flagging sequence)	Wetland Type [a]	General Description	Soil Type (drainage class)	Principal Functions and Values of the Wetland	Characteristic Vegetation (indicator status) [b]
					Lythrum salicaria (OBL) *Spiraea tomentosa* (FACW) *Euthrochium maculatum* (OBL) *Juncus effusus* (OBL) ***Paspalum laeve* (FAC)** *Euthamia caroliniana* (FAC) *Eupatorium perfoliatum* (FACW) *Rhynchospora capitellata* (OBL) *Setaria pumila* ssp. *pumila* (FAC) *Cyperus strigosus* (FACW)
Wetland 7 (C1-C104)	E2EM1/5 P and E1UBL	The majority of this wetland system consists of a *Phragmites australis*-dominated tidal wetland bordered by a zone of *Baccharis halimifolia* landward.	Aquents (poorly drained fill materials)	Floodflow Alteration Fish and Shellfish Habitat Wildlife Habitat Uniqueness/Heritage	*Phragmites australis* (FACW) *Spartina alterniflora* (OBL) *Spartina patens* (FACW) *Distichlis spicata* (FACW) *Juncus gerardii* (OBL) *Baccharis halimifolia* (FACW) *Iva frutescens* (FACW)

Notes:

(a) Wetland Type (Cowardin, et. al., 1979 and Federal Geographic Data Committee, 2013)
R3UB2/4 – Riverine lower perennial unconsolidated bottom (sand/mud) watercourse
PFO1E – Palustrine Forested Broad-leaved Deciduous seasonally flooded/saturated wetland
PEM5H – Palustrine Emergent *Phragmites australis*-dominated permanently flooded wetland
PEM2 – Palustrine Emergent, non-persistent wetland
PEM2J – Palustrine Emergent, non-persistent intermittently-flooded wetland
E2EM1/5P – Estuarine intertidal emergent, persistent/*Phragmites australis*, irregularly flooded wetland

Wetland ID (flagging sequence)	Wetland Type [a]	General Description	Soil Type (drainage class)	Principal Functions and Values of the Wetland	Characteristic Vegetation (indicator status) [b]
		E1UBL – Estuarine subtidal, unconsolidated bottom, subtidal deepwater habitat (b) Wetland Indicator Status: OBL (Obligate): Almost always occur in wetland FACW (Facultative Wetland): Usually occur in wetland, but may occur in non-wetland FAC (Facultative): Occur in wetland or non-wetland **Bold text** = State listed plant species			

Table 2: NRCS Mapped Soils in the Vicinity of the Project Area

Soil ID	Soil Name	Drainage Class	Official NRCS Soil Series Description
24	Deerfield Loamy Sand	Moderately well-drained	Soils belonging to the Deerfield series consists of loamy sands of glaciofluvial deposits. They are derived from acidic crystalline rocks such as granite, gneiss, and schist. They are recognized as farmland soils of statewide importance.
37	Manchester gravelly sandy loam	Excessively-drained	The soils of the Manchester series consists of gravelly sandy loam that originated from glaciofluvial deposits. They are derived from acidic red sandstone, shale, and conglomerate bedrocks. They are recognized as farmland soils of statewide importance.
98	Westbrook mucky peat	Very poorly drained	The Westbrook series consists of very deep soils formed in organic deposits over loamy mineral material. They are in tidal marshes subject to inundation by salt water twice daily.
306	Udorthents-Urban Land complex	Well drained	This complex consists of soils that have been disturbed by cutting or filling, and areas that are covered by buildings and pavement.
308	Udorthents, smoothed	Moderately well drained	Udorthents, smoothed, consists of areas from which soil material has been excavated, and nearby areas in which this material has been deposited. The original soil material is generally excessively drained to moderately well drained, and ranges from nearly level to very steep.
	Aquents (un-mapped)	Poorly to very poorly drained	Aquents are soils formed in human transported material or on excavated (cut) landscapes. They typically exist as smaller units within Udorthent soil materials.

The larger wetland complexes that are not within the maintained areas around the runways form important habitat systems and wildlife corridors that provide resources for various fish and wildlife species known to occur in tidal marshes and tidal creeks. The tidal wetlands within the maintained areas around the runways provide limited habitat for various wildlife species of conservation concern. *Paspalum laeve*, a characteristic wetland plant of the herbaceous layer in multiple PEM wetlands on the site, is listed in the State of Connecticut Endangered Species Act as Threatened. A "Threatened" designation is given to plants that have been documented by research and scientific inventory to occur at only six to nine locations in the state. Field Beadgrass is primarily restricted to sites within CT's coastal zone such as Old Lyme, East Haddam, Groton

(W. Moorhead, personal communication), in undisclosed sites in New Haven County (Magee and Ahles, 1999); and in a similar biogeographic zone in NY (e.g., on Fisher's Island and in various municipalities of Long Island, based upon FHI's review of New York State Museum specimen labels). The density and distribution of this species on the Airport has not yet been determined. It is recommended that these metrics be completed during the permitting stage of the project.

Wetland Function-Value Evaluation Form

Total area of wetland 8.4ac Human made? N Is wetland part of a wildlife corridor? Y or a "habitat island"?

Adjacent land use Runway Distance to nearest roadway or other development 250'

Dominant wetland systems present PEM 1/5d Contiguous undeveloped buffer zone present

Is the wetland a separate hydraulic system? N If not, where does the wetland lie in the drainage basin? lower

How many tributaries contribute to the wetland? 1 Wildlife & vegetation diversity/abundance (see attached list)

Wetland I.D. Wetland 7

Latitude 41.252328 Longitude -72.888514

Prepared by: AJZ Date 11-11-21

Wetland Impact:
Type TBD Area TBD

Evaluation based on:
Office X Field X

Corps manual wetland delineation completed? Y X N

Function/Value	Suitability Y	Suitability N	Rationale (Reference #)*	Principal Function(s)/Value(s)	Comments
Groundwater Recharge/Discharge	○	◉	4,7		7=Morris and Tuttle Creeks
Floodflow Alteration	◉	○	4,5,9,10,11,12,13,18	X	13=Morris and Tuttle Creeks
Fish and Shellfish Habitat	◉	○	1,2,3,4	X	
Sediment/Toxicant Retention	◉	○	1,2,3,4,5,8,10,15,16		1=road sands; 2=vehicle fluids, 10=Morris and Tuttle Creeks
Nutrient Removal	◉	○	2,3,4,5,6,7,8,9,10,11		14; 4=residential lawns

Appendix C - USACE Wetland Documentation Dataforms

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven (HVN) Airport City/County: New Haven/New Haven Sampling Date: 10-29-21

Applicant/Owner: City of New Haven State: CT Sampling Point: E36U

Investigator(s): AJZ/JJW Section, Township, Range:

Landform (hillside, terrace, etc.): Local relief (concave, convex, none): Slope (%):

Subregion (LRR or MLRA): LRR R Lat: -41.27178354 Long: -72.88871735 Datum:

Soil Map Unit Name: Deerfield Loamy fine sand NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No (If no, explain in Remarks.)

Are Vegetation Y, Soil Y, or Hydrology Y significantly disturbed? Are "Normal Circumstances" present? Yes No X

Are Vegetation N, Soil N, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes	No X	**Is the Sampled Area**		
Hydric Soil Present?	Yes	No X	**within a Wetland?**	**Yes**	**No** X
Wetland Hydrology Present?	Yes	No X	If yes, optional Wetland Site ID:		

Remarks: (Explain alternative procedures here or in a separate report.)
Much of the upland vegetation was mowed;.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes	No X	Depth (inches):
Water Table Present?	Yes	No X	Depth (inches):
Saturation Present? (includes capillary fringe)	Yes	No X	Depth (inches):

Wetland Hydrology Present? **Yes** **No** X

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Number of Dominant Species That Are OBL, FACW, or FAC: 0 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 0.0% (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x 1 =	0
FACW species	0	x 2 =	0
FAC species	0	x 3 =	0
FACU species	79	x 4 =	316
UPL species	3	x 5 =	15
Column Totals:	82 (A)		331 (B)
Prevalence Index = B/A =			4.04

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** ___ **No** X

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: E36U

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-8	7.5YR 2.5/1						Sandy	
8-12	5YR 4/4						Sandy	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Dark Surface (S7)
- ___ Polyvalue Below Surface (S8) (**LRR R, MLRA 149B**)
- ___ Thin Dark Surface (S9) (**LRR R, MLRA 149B**)
- ___ High Chroma Sands (S11) (**LRR K, L)**
- ___ Loamy Mucky Mineral (F1) (**LRR K, L**)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)
- ___ Marl (F10) (**LRR K, L**)

Indicators for Problematic Hydric Soils[3]:

- ___ 2 cm Muck (A10) (**LRR K, L, MLRA 149B**)
- ___ Coast Prairie Redox (A16) (**LRR K, L, R**)
- ___ 5 cm Mucky Peat or Peat (S3) (**LRR K, L, R**)
- ___ Polyvalue Below Surface (S8) (**LRR K, L**)
- ___ Thin Dark Surface (S9) (**LRR K, L**)
- ___ Iron-Manganese Masses (F12) (**LRR K, L, R**)
- ___ Piedmont Floodplain Soils (F19) (**MLRA 149B**)
- ___ Mesic Spodic (TA6) (**MLRA 144A, 145, 149B**)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (TF12)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: _____

Depth (inches): _____

Hydric Soil Present? **Yes** ___ **No** X

Remarks:

This data form is revised from Northcentral and Northeast Regional Supplement Version 2.0 to reflect the NRCS Field Indicators of Hydric Soils version 7.0 March 2013 Errata. (http://www.nrcs.usda.gov/Internet/FSE_DOCUMENTS/nrcs142p2_051293.docx)

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven (HVN) Airport City/County: East Haven/New Haven Sampling Date: 10-29-21

Applicant/Owner: City of New Haven State: CT Sampling Point: H19W

Investigator(s): AJZ/JJW Section, Township, Range:

Landform (hillside, terrace, etc.): bottomland Local relief (concave, convex, none): concave Slope (%):

Subregion (LRR or MLRA): LRR R Lat: 41.26904653 Long: -72.88417179 Datum:

Soil Map Unit Name: Udorthents - Urban Land Complex NWI classification: none

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No (If no, explain in Remarks.)

Are Vegetation N, Soil N, or Hydrology Y significantly disturbed? Are "Normal Circumstances" present? Yes No X

Are Vegetation N, Soil N, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes X	No	**Is the Sampled Area**		
Hydric Soil Present?	Yes X	No	**within a Wetland?**	**Yes** X	**No**
Wetland Hydrology Present?	Yes X	No	If yes, optional Wetland Site ID:		

Remarks: (Explain alternative procedures here or in a separate report.)

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- X Surface Water (A1)
- High Water Table (A2)
- X Saturation (A3)
- Water Marks (B1)
- Sediment Deposits (B2)
- Drift Deposits (B3)
- Algal Mat or Crust (B4)
- Iron Deposits (B5)
- Inundation Visible on Aerial Imagery (B7)
- Sparsely Vegetated Concave Surface (B8)
- Water-Stained Leaves (B9)
- Aquatic Fauna (B13)
- Marl Deposits (B15)
- Hydrogen Sulfide Odor (C1)
- Oxidized Rhizospheres on Living Roots (C3)
- Presence of Reduced Iron (C4)
- Recent Iron Reduction in Tilled Soils (C6)
- Thin Muck Surface (C7)
- Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- Surface Soil Cracks (B6)
- Drainage Patterns (B10)
- Moss Trim Lines (B16)
- Dry-Season Water Table (C2)
- Crayfish Burrows (C8)
- Saturation Visible on Aerial Imagery (C9)
- Stunted or Stressed Plants (D1)
- Geomorphic Position (D2)
- Shallow Aquitard (D3)
- Microtopographic Relief (D4)
- X FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes X	No	Depth (inches):	1
Water Table Present?	Yes X	No	Depth (inches):	0
Saturation Present? (includes capillary fringe)	Yes X	No	Depth (inches):	0

Wetland Hydrology Present? **Yes** X **No**

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

VEGETATION – Use scientific names of plants.

Sampling Point: H19W

Tree Stratum (Plot size:)	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 4 (A)

Total Number of Dominant Species Across All Strata: 4 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100.0% (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x 1 =	0
FACW species	25	x 2 =	50
FAC species	110	x 3 =	330
FACU species	0	x 4 =	0
UPL species	0	x 5 =	0
Column Totals:	135 (A)		380 (B)

Prevalence Index = B/A = 2.81

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

X 2 - Dominance Test is >50%

X 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** X **No** ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: H19W

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven Airport (HVN) City/County: East Haven/New Haven Sampling Date: 10-29-21

Applicant/Owner: City of New Haven State: CT Sampling Point: F19U

Investigator(s): Anthony Zemba; Josh Weiss Section, Township, Range:

Landform (hillside, terrace, etc.): Local relief (concave, convex, none): convex Slope (%):

Subregion (LRR or MLRA): LRR R Lat: 41.26242650 Long: -72.88275548 Datum:

Soil Map Unit Name: Udorthents NWI classification: n/a

Are climatic / hydrologic conditions on the site typical for this time of year? Yes X No (If no, explain in Remarks.)

Are Vegetation Y, Soil Y, or Hydrology Y significantly disturbed? Are "Normal Circumstances" present? Yes No X

Are Vegetation N, Soil Y, or Hydrology N naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes	No N	**Is the Sampled Area**		
Hydric Soil Present?	Yes	No N	**within a Wetland?**	**Yes**	**No** N
Wetland Hydrology Present?	Yes	No N	If yes, optional Wetland Site ID:		

Remarks: (Explain alternative procedures here or in a separate report.)
Area augmented with historical fill material?

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes	No x	Depth (inches):
Water Table Present?	Yes	No x	Depth (inches):
Saturation Present? (includes capillary fringe)	Yes	No x	Depth (inches):

Wetland Hydrology Present? **Yes** **No** X

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

VEGETATION – Use scientific names of plants. Sampling Point: F19U

Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 1 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 50.0% (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x 1 =	0
FACW species	0	x 2 =	0
FAC species	35	x 3 =	105
FACU species	35	x 4 =	140
UPL species	0	x 5 =	0
Column Totals:	70 (A)		245 (B)
Prevalence Index = B/A =			3.50

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** ___ **No** X

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: F19U

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
0-12	7.5YR 2.5/2	100					Sandy	
12-14	7.5YR 2.5/2	90	7.5YR 4/6	10	C	M	Sandy	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Dark Surface (S7)
- ___ Polyvalue Below Surface (S8) (**LRR R, MLRA 149B**)
- ___ Thin Dark Surface (S9) (**LRR R, MLRA 149B**)
- ___ High Chroma Sands (S11) (**LRR K, L)**
- ___ Loamy Mucky Mineral (F1) (**LRR K, L**)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)
- ___ Marl (F10) (**LRR K, L**)

Indicators for Problematic Hydric Soils[3]:

- ___ 2 cm Muck (A10) (**LRR K, L, MLRA 149B**)
- ___ Coast Prairie Redox (A16) (**LRR K, L, R**)
- ___ 5 cm Mucky Peat or Peat (S3) (**LRR K, L, R**)
- ___ Polyvalue Below Surface (S8) (**LRR K, L**)
- ___ Thin Dark Surface (S9) (**LRR K, L**)
- ___ Iron-Manganese Masses (F12) (**LRR K, L, R**)
- ___ Piedmont Floodplain Soils (F19) (**MLRA 149B**)
- ___ Mesic Spodic (TA6) (**MLRA 144A, 145, 149B**)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (TF12)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Subject: Wetland Delineation Report for Tweed New Haven Regional Airport
Runway Extension and Terminal Expansion
New Haven and East Haven, Connecticut

I. INTRODUCTION

This letter presents my findings regarding wetlands investigation at the Tweed New Haven Regional Airport in New Haven and East Haven, Connecticut (Figures 1 & 2). The purpose of this work was to field delineate all wetland edges in those areas being assessed for mitigation, which are the eastern, western and southern portions of the property, and property owned by Town Fair Tire, south of Uriah Street. This report is submitted to Hoyle, Tanner & Associates, Inc. for the proposed new terminal and runway extension project to accommodate existing and growing aircraft operations and passenger volumes.

McCue Environmental, LLC (McCue) conducted the site reconnaissance for wetlands on April 24, April 25, May 2, June 10, June 20, November 1 and 18, 2024. At these times, McCue delineated several areas of wetlands within the subject areas. Web Soil Survey available online at http://websoilsurvey.sc.egov.usda.gov/App/WebSoilSurvey.aspx, the Connecticut DEEP Geographic Information System (CTGIS) data and the National Wetlands Inventory (NWI) mapper (fws.gov/program/national-wetlands-inventory/wetlands-mapper) were consulted as a part of this effort. Figures 2A through 2F show the delineated wetlands at 1" = 300' and 1' = 400'scales, and mapped wetland types.

NWI mapping was used as a baseline by McCue Environmental with field observations editing, where needed. A combination of aerial photograph review and interpretation, and field observations were used in identifying habitat changes where lines were not laid. It should be noted that areas well interior of each delineated wetland were not accessed directly, therefore, smaller areas of differing subtypes may be present.

RELEVANT SITE HSTORY

The emergence of an airport in New Haven began in 1922 when mayor David E. Fitzgerald initiated the purchase of 220 acres of land situated on the New Haven-East Haven municipal boundary in a rural area of the community. In 1929, a ground-breaking ceremony occurred and on September 29, 1931, New Haven Municipal Airport celebrated its opening day. There has been intermittent scheduled commercial air service at HVN as early as 1934 when passenger and

mail flights were operated by American Airlines. The Airport is a non-hub, commercial service primary airport located in the both the City of New Haven and Town of East Haven, New Haven County, Connecticut approximately three miles southeast of the central business district of New Haven. The Airport has one paved asphalt runway: Runway 2-20, which is 5,600 feet long by 150 feet wide. Runway 14-32 is not eligible for federal funding as a crosswind runway and will remain closed permanently. Runway 2-20 has two partial parallel taxiways, one supporting each runway end. The Airport has an Airport Traffic Control Tower (ATCT) that provides guidance to the Airport and the Airport's airspace. HVN occupies approximately 437 acres of and. Presently, airlines operate out of the Airport terminal building. This building, originally constructed as a conventional hangar, was built in 1930 and then converted into the terminal building in 1995.

II. METHODOLOGY

These delineations were done in accordance with the Connecticut Department of Energy and Environmental Protection (DEEP) Inland Wetlands and Watercourses Act (Connecticut General Statutes Sections 22a-36 through 22a-45), and the US Army Corps of Engineers Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Northcentral and Northeast Region (Version 2), January 2012. A hand Dutch auger was used in observing soil profiles, and data collected included characteristics of soil horizons, soil color using a Munsell soil color chart, and documentation of site features such as topography, hydrology and vegetation types and density.

The wetland functional assessments were performed using the US Army Corps of Engineers Highway Methodology Workbook and associated Wetland Function-Value Evaluation Form.

III. RESULTS

PROJECT AREAS

(please note there is no WF-200 series flagging)

Tweed New Haven Regional Airport North Area Delineations (Figure 2A and P-1)

The identified wetland, represented by flag series WF100 – WF194, is a wooded swamp in the areas of the delineation; there are common reed (*Phragmites australis*, further referred to as *Phragmites*) dominated areas well interior of the flagged wetland edge. Vegetation observed in the delineated wetlands include red maple (*Acer rubrum*), green ash (*Fraxinus pennsylvanica*), highbush blueberry (*Vaccinium corymbosum*), sweet pepperbush (*Clethra alnifolia*), multiflora rose, royal fern (*Osmunda regalis*), cinnamon fern (*Osmundastrum cinnamomeum*), skunk cabbage (*Symplocarpus foetidus*), sphagnum moss (*Sphagnum* sp.) and common greenbrier (*Smilax rotundifolia*).

The area of upland is forest habitat. Vegetation observed includes red maple, Norway maple (*Acer platanoides*), red oak (*Quercus rubra*), black cherry (*Prunus serotina*), sassafras trees and saplings (*Sassafras albidum*), Russian olive (*Elaeagnus angustifolia*), multiflora rose, privet (*Ligustrum vulgare*), eastern burning bush (*Euonymus atropurpureus*), Japanese honeysuckle

(*Lonicera japonica*), Canada mayflower (*Maianthemum canadense*), poison ivy (*Toxicodendron radicans*), garlic mustard (*Alliaria petiolate*) and Asiatic bittersweet (*Celastrus orbiculatus*).

The NWI mapper classifies the swamp as PFO1E: Palustrine (P), Forested (FO), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E). As noted, there are areas of *Phragmites* dominated marsh habitat well interior of the wetland, which are mapped as PEM1/5F: Palustrine (P), Emergent persistent (EM1), Phragmites australis (5), Semi permanently Flooded (F). These map classifications would be consistent with the McCue site investigations, however, based on the detailed delineation, the PFO1E extent is broader than what is shown on the NWI Mapper as it coincides with the actual field delineation.

Tweed New Haven Regional Airport Central Area Delineations (Figure 2B and P-2)

North of Pig Farm Road

The identified wetland north of Pig Farm Road is represented by flag series WF300 – WF384. This wetland consists of several classifications, including a very dense *Phragmites* community. The delineated edge is mostly adjacent to areas of prior disturbances, including a former storage ground and Pig Farm Road. Vegetation observed in the delineated wetland includes red maple (*Acer rubrum*), black gum (*Nyssa sylvatica*), white birch (*Betula papyrifera*), arrowwood (*Viburnum dentatum*), pussy willow (*Salix discolor*), swamp azalea (*Rhododendron viscosum*), multiflora rose, *Phragmites*, common greenbrier and fox grape (*Vitis labrusca*).

As noted, the area of upland generally consists of disturbed areas associated with former and current airport operations. Vegetation in the upland areas include big-tooth aspen (*Populus grandidentata*), black locust (*Robinia pseudoacacia*), privet, multiflora rose, glossy buckthorn (*Frangula alnus*), staghorn sumac (*Rhus typhina*), poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier and garlic mustard.

The NWI mapper classifies the portion of the wetland along flags WF300 to Pig Farm Road as PSS1E: Palustrine (P), Scrub-Shrub (SS), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E). The common reed dominated area of the wetland north of Pig Farm Road is classified as PEM1/5F: Palustrine (P), Emergent persistent (EM1), Phragmites australis (5), Semi permanently Flooded (F). These classifications would be consistent with the McCue site investigations; however, it should be noted that the NWI mapper erroneously includes the upland area west of flags WF300 to Pig Farm Road as the scrub-shrub classification.

Additionally, there are areas I have mapped separately from what the NWI mapper depicts. These are the areas of open water within the *Phragmites* dominated area, and the portion of the wetland that occurs in the maintained area south of the east terminal runway. The open water areas are classified as PUBH: Palustrine (P), Unconsolidated Bottom (UB), Permanently Flooded (H), and the maintained wetland area as PEM1E: Palustrine (P), Emergent (EM), persistent (1), Seasonally Flooded/Saturated (E).

South of Pig Farm Road

The identified wetland south of Pig Farm Road is represented by flag series WF400 – WF459. This wetland also consists of several classifications, including a very dense *Phragmites* community. Again, the delineated edge is entirely adjacent to areas of prior disturbances,

including a former storage ground and Pig Farm Road. Vegetation observed in the delineated wetland includes black gum, arrowwood, highbush blueberry, multiflora rose, *Phragmites*, common greenbrier and fox grape.

Vegetation in the upland areas include blackberry (*Rubus allegheniensis*), black locust, multiflora rose, arrowwood, sassafras, staghorn sumac, poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier, fox grape, goldenrod species and a dense stand of Japanese knotweed (*Reynoutria japonica*).

The NWI mapper primarily only maps the wetland area south of Pig Farm Road as E2EM1Pd: Estuarine (E), Intertidal (2), Emergent persistent (EM1), Irregularly Flooded (P), Partially Drained/Ditched (d). In performing the field delineations, McCue observed two additional classifications that are depicted on Figure 2B: narrow bands of PFO1E: Palustrine (P), Forested (FO), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E), and areas of PSS1E: Palustrine (P), Scrub-Shrub (SS), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E). It is also noted that the mapped E2EM1Pd should also have the *Phragmites* qualifier (5) as much of this area is dominated by *Phragmites.*

In addition, in interior portions of the E2EM1Pd area, there are created channels that have been classified here as E1UBLx: Estuarine (E), Subtidal (1), Unconsolidated Bottom (UB), Subtidal (L) excavated (x). It is noted that these water areas were mapped based on the CAD data from the prior restoration project and that these channels (e.g. Ordinary High Water (OHW) or Mean High Water (MHW)) were not field delineated.

Tweed New Haven Regional Airport: Uriah Street Area and Town Fair Tire Delineations (Figure 2C and P-3)

The identified wetland in this area has been represented by flag series WF800 – WF941. This wetland consists of several classifications, including a very dense *Phragmites* community. The beginning of the WF-800 series is the southern portion of the WF-400 series wetland complex. Vegetation observed in the delineated wetlands include red maple, gray birch (*Betula populifolia*), black gum, pussy willow, arrowwood, elderberry (*Sambucus canadensis*), black raspberry, multiflora rose, *Phragmites*, water purslane (*Ludwigia palustris*), lurid sedge (*Carex lurida*), Canada rush (*Juncus canadensis*), swamp milkweed (*Asclepias incarnata*), soft rush (*Juncus effusus*), several goldenrod species, common greenbrier and fox grape (*Vitis labrusca*).

The upland area consists primarily of previously disturbed areas and a large upland forested area. Vegetation in the upland areas include big-tooth aspen, trembling aspen (*Populus tremuloides*), black locust, red oak, privet, multiflora rose, glossy buckthorn, staghorn sumac, ragweed (*Ambrosia artemisiifolia*), poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier and garlic mustard.

The NWI mapper classifies the entire flagged wetland series as E2EM1/5Pd: Estuarine (E), Intertidal (2), Emergent persistent (EM1), Phragmites australis (5), Irregularly Flooded (P), Partially Drained/Ditched (d). Based on my observations in the field, I further mapped additional and separate classifications from what the NWI mapper depicts, including areas of PFO, PSS, and PEM (freshwater). It is also the opinion of McCue that the dense Phragmites area on the

Town Fair Tire property is likely not affected by tidal water regimes; therefore, this area of Phragmites is mapped as PEM.

Tweed New Haven Regional Airport South Area Delineations (Figure 2D and P-4)

The identified wetland in this area has been represented by flag series WF500 – WF530, WF600 – WF648 and WF700 – WF714. This wetland consists of several classifications: see the NWI mapper section below and Figure 2D. Vegetation observed in each corresponding classification is very consistent with the vegetation listed in this report. The more dominant species observed in each classification includes *Phragmites* in the E2EM and PEM Phrag type; pussy willow, alder (*Alnus incana*) and red maple in the PSS type; and various freshwater emergent species in the PEM type, including soft rush, goldenrod species, jewelweed (*Impatiens capensis*) and sensitive fern (*Onoclea sensibilis*).

The upland areas consist primarily of dense scrub-shrub habitat. The upland area in the vicinity of the WF-600 series consists of a former stone and mortar structure on an area that includes exposed ledge. Vegetation in the upland areas include trembling aspen, black locust, red oak, privet, multiflora rose, glossy buckthorn, staghorn sumac, Russian olive, black raspberry, ragweed, poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier and garlic mustard.

The NWI mapper classifies some of this area as both E2EM1/5Pd: Estuarine (E), Intertidal (2), Emergent persistent (EM1), Phragmites australis (5), Irregularly Flooded (P), Partially Drained/Ditched (d) and E2EM5/1P: Estuarine (E), Intertidal (2), Emergent (EM), Phragmites australis (5), Persistent (1), Irregularly Flooded (P).

Based on the McCue observations in the field, areas of PSS and PEM (freshwater) are further mapped. It is the opinion of McCue that these PSS and PEM areas are not likely not affected by tidal water regimes, in addition to the PEM Phrag area that is mapped south of the airport fence. Further salinity testing results may affect the opined mapped areas.

In addition, the tidal channel classified here as E1UBLx: Estuarine (E), Subtidal (1), Unconsolidated Bottom (UB), Subtidal (L) excavated (x), again based on the CAD data from the prior restoration project and field observations. However, the OHM and/or MHW were not specifically field delineated.

Tweed Airport West Area Delineations (Figures 2E & 2F, and P-5 & P-6)

The identified wetland in this location is represented by flag series WF1000 – WF1020, WF1100 – WF1114, WF1200 – WF1284 and WF1300 – WF1347. This wetland area consists of several classifications, including a very dense *Phragmites* community. The delineated edge is entirely adjacent to areas of prior disturbances, including maintained airport grounds and steep, previously excavated banks or fill slopes. Vegetation observed in the WF1000, 1200 and 1300 series delineated wetlands include black gum, arrowwood, highbush blueberry, multiflora rose, *Phragmites*, common greenbrier, seaside goldenrod (*Solidago sempervirens*), Asiatic bittersweet and fox grape. The WF-1100 series wetland and the areas along the WF1200-series that are mapped as E2EM contain hightide bush (*Iva frutescens*), saltmeadow cordgrass (*Spartina*

patens), saltwater cordgrass (*Spartina alterniflora*) (at the channel banks), panic grass (*Panicum* sp.) and seaside goldenrod.

Vegetation in the upland areas include black oak (*Quercus velutina*), gray birch, barberry (*Berberis thunbergii*), blackberry, black locust, multiflora rose, tree-of-heaven, staghorn sumac, poison ivy, Japanese honeysuckle, Asiatic bittersweet, common greenbrier, fox grape, goldenrod species, Japanese knotweed and mugwort.

The NWI mapper classifies the following wetland classifications in this delineated area: E2EM1/5Pd: Estuarine (E), Intertidal (2), Emergent persistent (EM1), Phragmites australis (5), Irregularly Flooded (P), Partially Drained/Ditched (d), and PFO1E: Palustrine (P), Forested (FO), Broad-leaved Deciduous (1), seasonally flooded/saturated flooded (E). In addition, the main channel east of Dean Street is classified as Riverine (R), Unknown Perennial (5), Unconsolidated Bottom (UB), Semipermanently Flooded (F), Excavated (x). Field observations during the delineation effort confirmed tidal influence north of the classified E1UBLx: Estuarine (E), Subtidal (1), Unconsolidated Bottom (UB), Subtidal (L) excavated (x) that is mapped west of the terminus of runway 2. The channels north of this classified area have therefore been classified as E1UBLx and mapped based on the CAD data from the prior restoration project; the channels (e.g. Ordinary High Water (OHW) or Mean High Water (MHW)) were not field delineated.

Additionally, one additional type has been mapped than what the NWI mapper depicts. This area is consistent with the areas delineated with the WF-1100 series and the area of approximate flag numbers WF1200 through WF1220 and is classified as E2EM1P: Estuarine (E), Intertidal (2), Emergent (EM), Persistent (1), Irregularly flooded (P); more saltwater species were present in these areas.

SOILS (Figure 3)

Multiple, detailed soil profiles were not investigated throughout the entire project area extent; however, random plots were examined throughout the wetland delineation process and wetland delineation data forms are provided. The Web Soil Survey (State of Connecticut, Western Part (CT601)) was reviewed; it is my opinion that the Web Soil Survey is generally consistent with the wetland delineations, however, some observations are noted below. The following is a list of the delineated wetland flag series and soils mapped within each area; the full Web Soil Survey map and descriptions are found in Appendix E:

WF100 – WF194:
Hydric soils: Walpole sandy loam (13) and Westbrook mucky peat (99)

Adjacent upland soils: Deerfield loamy fine sand (24A) and Udorthents-Urban Land Complex (306)

WF300 – WF384:
Hydric soils: Westbrook mucky peat (99)

Adjacent upland soils: Udorthents-Urban Land Complex (306); this soil series is mapped too broadly into the delineated wetland in the area east of flags WF300 – WF340 and south of the runway

WF400 – WF459:
Hydric soils: Westbrook mucky peat (99) (tidally influenced in interior sections)

Adjacent upland soils: Udorthents-Urban Land Complex (306) and Udorthents, smoothed (308)

WF500 – WF530, WF600 – WF648, WF700 – WF714:
Hydric soils: Sulfaquents (947); the majority of these delineations are mapped as non-hydric soils (see below). In the opinion of McCue, soils underlying the delineated wetlands most closely resemble the Westbrook mucky peat (99)

Adjacent upland soils: Deerfield loamy fine sand (24A), Penwood loamy sand (35B), Cheshire-Holyoke complex (77C), Penwood-Urban Land Complex (235B) and Udorthents, smoothed (308)

WF800/WF900:
Hydric soils: Sulfaquents (947); in the opinion of McCue, the Sulfaquents should be mapped to the delineated wetlands edge

Adjacent upland soils: Holyoke rock-outcrop complex (78E) and Udorthents, smoothed (308)

WF1000, WF1100, WF1200 and WF1300 series:
Hydric soils: Westbrook mucky peat (99) and Gales Ferry silt loam, intertidal (917)

Adjacent upland soils: Udorthents-Urban Land Complex (306)

The delineations were performed by Joseph P. McCue, PWS, whose qualifications include over 28 years' experience in the practice of wetland science, is a Professional Soil Scientist with the Society of Soil Scientists of Southern New England (SSSSNE), and a Professional Wetland Scientist (#2010) certified by the Society of Wetland Scientists (SWS).

Please note that the information provided herein represents the best professional judgment of McCue Environmental, LLC, and should not be construed to represent the finding of any regulatory agency.

Thank you for the opportunity to work with you on this project. Please contact me at (401) 595-4276 if you have any questions regarding this work, or if you require additional information.

Sincerely yours,
MCCUE ENVIRONMENTAL, LLC

Joseph P. McCue, PWS
President
Principal Environmental Scientist

ACOE Wetland Edge Delineation Data Forms

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven Airport City/County: New Haven & East Haven Sampling Date: 4/24/2024

Applicant/Owner: _____ State: CT Sampling Point: WF175wet

Investigator(s): J. McCue (McCue Environmental, LLC) Section, Township, Range: _____

Landform (hillslope, terrace, etc.): Forested area shallow slope Local relief (concave, convex, none): concave Slope (%): 1%

Subregion (LRR or MLRA): LRR R Lat: 41.2641 Long: -72.8818 Datum: CT State Plane

Soil Map Unit Name: Udorthents-Urban Land Complex (306) NWI classification: Not mapped, but PFO1E

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✓ No _____ (If no, explain in Remarks.)

Are Vegetation _____, Soil _____, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes ✓ No _____

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ✓	No _____	**Is the Sampled Area within a Wetland?** Yes ✓ No _____
Hydric Soil Present?	Yes _____	No ✓	If yes, optional Wetland Site ID: _____
Wetland Hydrology Present?	Yes ✓	No _____	

Remarks: (Explain alternative procedures here or in a separate report.)

See Remarks in the Soil section

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ✓ Surface Water (A1)
- ✓ High Water Table (A2)
- ✓ Saturation (A3)
- ✓ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ✓ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ✓ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ✓ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ✓	No _____	Depth (inches):	to 6" deep
Water Table Present?	Yes ✓	No _____	Depth (inches):	_____
Saturation Present? (includes capillary fringe)	Yes ✓	No _____	Depth (inches):	_____

Wetland Hydrology Present? Yes ✓ No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

VEGETATION – Use scientific names of plants.

Sampling Point: WF175wet

Tree Stratum (Plot size: 30')	Absolute % Cover	Dominant Species?	Indicator Status

Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC: 2 (A)

Total Number of Dominant Species Across All Strata: 2 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100 (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	0	x 1 =	0
FACW species	3	x 2 =	5
FAC species	196	x 3 =	588
FACU species	10.5	x 4 =	42
UPL species	0	x 5 =	0
Column Totals:	209.5 (A)		635 (B)

Prevalence Index = B/A = 3.03

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

✓ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ✓ No ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: WF175wet

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Type[1]	Loc[2]	Texture	Remarks
0 - 3	7.5YR 2/1	100					SL	
3 - 20	7.5YR 4/6	90	7.5YR 5/3	10			LS	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, MS=Masked Sand Grains.

[2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators:

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Dark Surface (S7) (**LRR R, MLRA 149B**)
- ___ Polyvalue Below Surface (S8) (**LRR R, MLRA 149B**)
- ___ Thin Dark Surface (S9) (**LRR R, MLRA 149B**)
- ___ Loamy Mucky Mineral (F1) (**LRR K, L**)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)

Indicators for Problematic Hydric Soils[3]:

- ___ 2 cm Muck (A10) (**LRR K, L, MLRA 149B**)
- ___ Coast Prairie Redox (A16) (**LRR K, L, R**)
- ___ 5 cm Mucky Peat or Peat (S3) (**LRR K, L, R**)
- ___ Dark Surface (S7) (**LRR K, L**)
- ___ Polyvalue Below Surface (S8) (**LRR K, L**)
- ___ Thin Dark Surface (S9) (**LRR K, L**)
- ___ Iron-Manganese Masses (F12) (**LRR K, L, R**)
- ___ Piedmont Floodplain Soils (F19) (**MLRA 149B**)
- ___ Mesic Spodic (TA6) (**MLRA 144A, 145, 149B**)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (TF12)
- ✓ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes _____ No ✓

Remarks:

This is a shallow depression that drains southward to the primary wetland area. Soils in this specific location may not make hydric soil criteria, however, it is this biologists' opinion that this area should be considered wetland because up to 6" of standing water was present, Acer rubrum dominates the wetland, buttressed tree roots are present with other water marks, and green frogs were observed in the wetland.

Column Totals:	148 (A)		454 (B)

Prevalence Index = B/A = 3.08

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

✓ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ✓ No ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes _____ No ✓

Remarks: (Include photo numbers here or on a separate sheet.)

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ✓ High Water Table (A2)
- ✓ Saturation (A3)
- ✓ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ✓ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ✓ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes ✓	No _____	Depth (inches): _____
Water Table Present?	Yes ✓	No _____	Depth (inches): 8"
Saturation Present? (includes capillary fringe)	Yes ✓	No _____	Depth (inches): 12"

Wetland Hydrology Present? Yes ✓ No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Standing water observed in interior sections.

VEGETATION – Use scientific names of plants.

Prevalence Index = B/A = 2.64

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

✓ 2 - Dominance Test is >50%

✓ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ✓ No ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: WF706wet

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Redox Features Type[1]	Redox Features Loc[2]	Texture	Remarks
0 - 12	7.5YR 2/2	100					SL	root rhizospheres

Investigator(s): J. McCue (McCue Environmental, LLC) Section, Township, Range: _____

Landform (hillslope, terrace, etc.): scrub-shrub, slight slope Local relief (concave, convex, none): none Slope (%): 1%

Subregion (LRR or MLRA): LRR R Lat: 41.2502 Long: -72.8875 Datum: CT State Plane

Soil Map Unit Name: Penwood loamy sand, 3 - 8% slopes (35B) NWI classification: _____

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✓ No _____ (If no, explain in Remarks.)

Are Vegetation _____, Soil _____, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes _____ No ✓

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _____	No ✓	**Is the Sampled Area within a Wetland?** Yes _____ No ✓
Hydric Soil Present?	Yes _____	No ✓	
Wetland Hydrology Present?	Yes _____	No ✓	If yes, optional Wetland Site ID: _____

Remarks: (Explain alternative procedures here or in a separate report.)

This is an area subject to prior disturbances which have established with shrub and tree species.
This flag series is also associated with the WF-500 and WF-700 series edges.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes _____	No ✓	Depth (inches): _____
Water Table Present?	Yes _____	No ✓	Depth (inches): _____
Saturation Present? (includes capillary fringe)	Yes _____	No ✓	Depth (inches): _____

Wetland Hydrology Present? Yes _____ No ✓

- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Dark Surface (S7) (**LRR R, MLRA 149B**)
- ___ Polyvalue Below Surface (S8) (**LRR R, MLRA 149B**)
- ___ Thin Dark Surface (S9) (**LRR R, MLRA 149B**)
- ___ Loamy Mucky Mineral (F1) (**LRR K, L**)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)

Indicators for Problematic Hydric Soils[3]:

- ___ 2 cm Muck (A10) (**LRR K, L, MLRA 149B**)
- ___ Coast Prairie Redox (A16) (**LRR K, L, R**)
- ___ 5 cm Mucky Peat or Peat (S3) (**LRR K, L, R**)
- ___ Dark Surface (S7) (**LRR K, L**)
- ___ Polyvalue Below Surface (S8) (**LRR K, L**)
- ___ Thin Dark Surface (S9) (**LRR K, L**)
- ___ Iron-Manganese Masses (F12) (**LRR K, L, R**)
- ___ Piedmont Floodplain Soils (F19) (**MLRA 149B**)
- ___ Mesic Spodic (TA6) (**MLRA 144A, 145, 149B**)
- ___ Red Parent Material (F21)
- ___ Very Shallow Dark Surface (TF12)
- ___ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if observed):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes _____ No ✓

Remarks:

WETLAND DETERMINATION DATA FORM – Northcentral and Northeast Region

Project/Site: Tweed New Haven Airport City/County: New Haven & East Haven Sampling Date: 6/20/2024

Applicant/Owner: _____ State: CT Sampling Point: WF888wet

Investigator(s): J. McCue (McCue Environmental, LLC) Section, Township, Range: _____

Landform (hillslope, terrace, etc.): Phrag. dom. marsh Local relief (concave, convex, none): flat Slope (%): 0%

Subregion (LRR or MLRA): LRR R Lat: 41.2568 Long: -72.8828 Datum: CT State Plane

Soil Map Unit Name: Udorthents smoothed (308) NWI classification: E2EM1/5Pd

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✓ No _____ (If no, explain in Remarks.)

Are Vegetation _____, Soil _____, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes _____ No ✓

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ✓	No _____	**Is the Sampled Area within a Wetland?** Yes ✓ No _____
Hydric Soil Present?	Yes ✓	No _____	If yes, optional Wetland Site ID: _____
Wetland Hydrology Present?	Yes ✓	No _____	

Remarks: (Explain alternative procedures here or in a separate report.)

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ✓ Surface Water (A1)
- ✓ High Water Table (A2)
- ✓ Saturation (A3)
- ✓ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ✓ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ✓ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present?	Yes _____	No ✓	Depth (inches): 0"
Water Table Present?	Yes ✓	No _____	Depth (inches): 14"
Saturation Present? (includes capillary fringe)	Yes ✓	No _____	Depth (inches): 14"

Wetland Hydrology Present? Yes ✓ No _____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

VEGETATION – Use scientific names of plants.

Sampling Point: WF888wet

Number of Dominant Species That Are OBL, FACW, or FAC: 3 (A)

Total Number of Dominant Species Across All Strata: 3 (B)

Percent of Dominant Species That Are OBL, FACW, or FAC: 100 (A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply by:	
OBL species	3	x 1 =	3
FACW species	83.5	x 2 =	167
FAC species	104	x 3 =	312
FACU species	0	x 4 =	0
UPL species	0	x 5 =	0
Column Totals:	187.5 (A)		479 (B)

Prevalence Index = B/A = 2.55

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

✓ 2 - Dominance Test is >50%

✓ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ✓ No ___

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: WF888wet

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth (inches)	Matrix Color (moist)	%	Redox Features Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks
